Further Information Desired.

Sir,—I should be glad if G. W. Grimsditch, who sent the recipe for egg cake published in Cage Birds of February 17th, would say whether he puts any bahn with the whole wheatmeal flour and eggs to make the egg-cake rise. Does he give the young ones this food right from the time they are hatched?

Kenneth.

A Disclaimer and an Appreciation.

Sir,—I hope Mr. Gutierrez does not think I am taking the honour re egg cake. At the first time of writing I could not remember the author's name, but I had read the recipe in Cage Birds. My modification may not be quite as good as Mr. Chiswell's original, but it has proved a success for me, and I thank Mr. Chiswell for it.

As I am only a novice, I look to those like Messrs. Gutierrez, Montague, and Tomlinson, who have climbed the ladder of fame, for my learning. Articles from them are of interest to the novice, and the building up of the fancy.

G. W. Grimsditch.

The Song of Hen Birds.

Sir,—In reply to the letter of "J. W." in Cage Birds of Feb. 24, I would say that I have had more than one hen Linnet which sang. The song is plaintive, and some of the notes are loud and irregular, hardly so connected as those of a hen Canary. I have also had two Greenfinch hens which sang, and a hen Hedge Sparrow which had a quaint little warble. All these birds were handreared by myself, and kept in separate cages. The hen Greenfinches that sang were somewhat brighter than usual on their underparts, something like a cock, but there was no doubt as to their sex, for they both laid eggs.

A Would if She Could Style.

Sir,—In reply to J. W.'s letter in Cage Birds respecting the song of hen Linnets, I have had in my possession for just over twelve months a hen brown Linnet (which I bought as a cage-moulted bird). Almost from the time I first had her she has sung in a "disjointed" fashion. Most of the ordinary notes of the male bird are uttered, but in a slow and hesitating way, as if the process of production were a great effort and the performer not very certain of the "time." The bird, of course, utters the ordinary "chortle" or "clow" of the Linnet in addition.

I may add that there is no possible doubt as to the sex of my bird, as, in addition to the unmistakable markings of the hen, she laid 3 or 4 eggs last summer.

C. V. Travers.

Gramophone Records for Teaching Bullfinches.

One Tune or Three Tunes on a Record?

Sir,—With reference to the objections of a correspondent on this subject to having more than one tune placed on one record, on the theory that one tune should be taught at a time and mastered by the bird before another is attempted, might I point out that neither wild nor domestic trained birds naturally teach their young one song tour or variation at a time. The Roller Canary, for example, does not learn one tour at a time, even when trained under natural songsters, but the tutor repeats his song tours throughout his repertory, leaving the young pupils to pick up what they can, and so on through the whole gamut of domestic or wild birds.

Supposing the record would take two or three different tunes, each one repeated two or three times over with a suitable interval before going on to the next, I should say it would be far preferable to have them all on the one record to start with, and continue from the beginning. Another point is the cost of making a record. If my memory serves me correctly, when this idea was first mooted the writer stated he had discovered that a record could be made for five guineas, for which one copy of the record was supplied, and future copies at the usual price. It may be useful to know that at least one of the great London stores during the past Christmas season was offering to make, at an inclusive cost of three guineas, vocal records of persons own voices, and to supply six copies free, and futures at the usual market prices.

Claude St. John.

A Ringed Starling Caught.

Sir,—I have in my possession a Starling caught at Redruth during the last spell of frost. On its left leg there is a ring, on the inside of which is the number 83837, and on the outside, Witherby and Co., Holborn, London. The owner can have bird on application.

Redruth. J. Thomas.

[The bird is one which has been ringed under the "British Birds" scheme, and is not the property of any individual. A copy of this letter has been sent to Messrs. Witherby, and they will doubtless let us know when and where the Starling was ringed. Readers who find birds marked with these rings should always let us know, as the number on the ring is evidence as to where the bird was marked and liberated, and its subsequent capture at the same or a different place is valuable evidence as to the movements of our British birds either from one part of the country or in their migration and return.—Ed., Cage Birds.

What is a Ticked Bird?

The Owners' Last Letter.

Sir,—As I intend this to be my last letter, I first take the opportunity of thanking you for placing at the disposal of ourselves and other fanciers the columns of Cage Birds for the discussion of this very interesting question. The letters that have appeared on the subject prove, however, only one thing, that is, many people, many minds.

To define a tick in the way that the definition would be accepted by all is a very difficult matter. Even if all the specialists clubs agreed upon the same definition, they would have no power to govern other societies. If we had a national authority, as suggested, every society would have to come under its rules for the organisation to have any success. Would they? I am afraid not. I doubt, in fact, whether the matter will ever be ended in a satisfactory fashion.

The present question is, shall we accept the definition of Blakston and the Yorkshire Union, or shall we go by the general acceptation of what is meant by the word "tick?" There is no doubt whatever that a tick is a small spot, therefore whatever the definition of the Yorkshire Union may be, this definition is simply a phrase. Under the rules of the Yorkshire Union it is quite possible for a bird which is eligible for competiton in the ticked class to carry more variegation than some of those in the marked class. Mr. House says that the Yorkshire Union has an easily understood interpretation of the different marks which make up the classification of Canaries. This may be so, but under the Yorkshire Union rules neither of our birds should have been allowed to stand at Aberavon Show, although in my opinion, each was in its proper class.

Mr. House says he thought he was arguing with the gentleman whom he saw at Aberavon, but that now he finds out it is not so. This does not matter; we are one. I may not know all that happened at the Show, but if I wished I could give the names of several leading exhibitors, and at least one judge who did not agree with the decision of Mr. House. These men were at Aberavon, but I do not intend to give their names, as I have no wish to drag others into the discussion. Either they come in of their own free will or not at all. At Birmingham Show there was no doubt whatever, for the definition of the tick was given in the schedule, and the bird was entered accordingly.

We have not said that we object to Blakston's definition of a tick, but we refuse to accept him as an authority so far as present day exhibiting is concerned. Blakston was a gentleman, and a clever man, and may have been able to pick the brains of others at the time, but things are not exactly the same now as then; and he would find it a far more difficult job. Since his death, Canaries in their many varieties have greatly improved, and this goes to prove that even after Blakston died there were fanciers left capable of using their own brains.

With regard to Mr. House's statement that the judge's decision is final; this is a point which is entirely without question. We submit to Mr. House's wrong classification of our bird, but we do not agree with him, and we have said so. We give the heading of the class in which we exhibited our bird, and we should like Mr. House to explain what he would have done if there had not been a class provided for clears or ticks.

It appears that 20 years ago Mr. House said that any two colours make variegation. To Mr. Johnson he says the same, and then follows with the statement that every ticked bird is a two-coloured bird. Is our bird a two coloured bird, or not? Even if the mark is no larger than a pin's head, surely it is a two-coloured bird, and on Mr. House's statement the bird is a variegated one. In my opinion there is a material difference between a variegated bird and a marked bird, and the schedule at Aberavon read: "Uneven or Variegated."

Mr. House has tried to explain to Mr. Johnson, but his attempt was a failure. Mr. Allsopp, the judge at Llanelly, gave his reasons for allowing the bird to stand, but he was at once sat upon. Messrs. Houghton, Roe, and Robson, men of years of experience, and breeders of some of the best, are given to understand that they cannot define a tick. It is only Mr. House's opinion that should stand final. Two things are left, one is that we accept the phrase used by the Yorkshire Union, and the other is that we shall understand what is a tick in the proper and true sense of the word.

In conclusion, I would like to say that although I disagree with Mr. House on this matter, it will not prevent me from holding out to him the hand of friendship if I should have the pleasure of again meeting him, and I hope he will always do the same towards ourselves.

Stubbs Bros.

The Size of the Tick.

Sir,—Mr. House's comments on my scheme are of little value. It is no good blaming me for what he calls a "labyrinth of classification." Why doesn't he blame the Canary for sporting to the extent it does, and for providing all the varieties I mention? This of course is to breeders the beauty and attraction of the Canary Fancy, and all I have been attempting to do is to regularise the classification of sub divisions.

Mr. House wants "Clearness and precision," and at the same time "Greater simplicity," but I may at once tell him he can't have both. Will Mr. House tell me what is the difference in size between a King George sixpence and an early Victorian sixpence? Does he mean the difference between a new sixpence and a worn sixpence? The difference can only be infinitesimal. However, I will gladly concede him a point, and we will use the expression "a worn sixpence."

I am also on this point inclined, after conversations with various fanciers, to modify my previous views, and to try to get nearer to Nuttall's definition of a tick as mentioned by Mr. Kershaw.

I would, therefore, now substitute for my previous definition of a tick the following:—"A tick, visible of course, being understood to be one solid green (or cinnamon), or grizzled green (or cinnamon) feathering of not more surface than can be covered entirely by a worn sixpence."

It will be noted that I now throw overboard two ticks or marks. I also reduce the size of the one tick, which may be as small as you please, but must not anywhere appear from under the circumference of the worn sixpence.

If this does not satisfy Mr. House, will he suggest a better test for a tick in conformity with the present practice of the fancy, which is not now in accordance with Blakston?

I am quite at a loss to understand Mr. House when he writes that "when we branch off with 'invisible ticks' and 'variegated' we are courting trouble." The two expressions are in use all over the fancy, and I should be glad if he would explain himself.

As regards "Invisible ticks," I find from the Yorkshire Union Book of Rules for 1915-16 that the first two classes in the Bradford West and Bradford East shows of 1915 are for "clear invisible or thigh ticked." (Is a thigh tick on a Yorkshire sometimes visible and sometimes invisible according to the position of the bird? And is this more the case in a Yorkshire than a Norwich?) The third and fourth classes are for "Ticked, described as discernible tick or mark." After that we have "Even, uneven or heavily variegated." Does Mr. House mean that "Invisible ticked" and "Variegated" in the above classification cannot be defined? Old Hand.

Three Questions.

Sir,—I had not intended to take any more of your space in this correspondence, but I see that Messrs. Stubbs mention my name in their letter of Feb. 17, and say Mr. House agrees with me. I have no doubt that a very great number of your readers also do so, including Messrs. Stubbs, as I find further on in their letter they say, "We have our Specialist Clubs, and it is for them to decide what would constitute a tick in the Norwich Canary." Exactly, this is one of the things I advocate.

Mr. House has done what in his opinion is the right thing, under the only rules that are in existence; I admire him for it.

I would like to ask three questions: Was the Aberavon show held under the patronage of any of the Norwich Plainhead Clubs? Are Messrs. Stubbs' members of that body? If so, why do they not place the matter before the Committee, and submit the bird, also the schedule from which they entered their bird? I have no doubt whatever they would pass an unbiassed judgment.

J. Spink.

Some Analogous Illustrations.

"Interested" asks if I can substantiate the view that the multiplicity of ticks answers to the well-understood definition of a ticked bird. Candidly speaking, yes! The bird in question is not clear, it is not marked, either technically or untechnically. It must be remembered that it was shown as a "marked" bird, and I wrong classed it as such. I could not admit the multiplicity of fine ticks as being a mark or marks.

I will endeavour to give "Interested" two or three analogous illustrations. We do not call a grey horse a black and white, yet it is black and white. A grizzled pigeon is not called a blue and white, yet it is a blue and white. A brindle cow is not called a red and black, yet it is red and black. In each of theso illustrations we have a multiplicity of fine ticks, or grizzling, so to speak. Were those fine ticks gathered into a solid mass, we should have a black and white horse, a blue and white pigeon, and a red and black cow respectively.

A mark, as I understand it, must be something solid and distinct, not a mere flecking or grizzling such as Messrs. Stubbs' bird possesses. If this bird is judged by the "a mark not larger than a sixpence" standard, it is still a ticked bird, because it has no solid mark, but a number of minute ticks, or fleckings.

C. A. House.

The Sparrow Pest.

Mr. G. H. Chamberlain, Ridding's Farm, Alfreton, Derbyshire, writing to "The Times," says: "I do not suppose that the average person has the slightest idea of the enormous amount of damage done to grain crops during the ripening period by birds, chiefly Sparrows. Instinct appears to tell the town-bred Sparrows when the crops are getting ripe in the country; at that time they leave our big cities by hundreds of thousands and have a riotous feast on the new grain until the harvest is over, then they return to winter quarters in the cities. Sparrows are like some of our best poisons; taken in small amounts they do good in some cases, but just now we are suffering from an overdose. We had for some years a very successful Sparrow Club in this district; each farmer paid to a local treasurer one farthing per acre for each acre he farmed. Sparrows' heads and eggs were paid for at the rate of four a penny. This scheme is quite all right for the country districts, but the Government ought at once to devise some similar scheme for the towns, as that is chiefly where the Sparrows are bred. If Sparrows' heads or eggs were paid for at the rate of four a penny, and each police office was made an authorised receiving station, the town boys would soon reduce the Sparrows by trapping, etc., but there is no time to be lost if we are to receive any benefit this year."

In a letter to "The Daily Telegraph" Mr. L. W. Lyde, of University College, says: "I find that 3,000 Sparrows will consume a peck of grain per acre per day, and they certainly waste as much again when the grain is mature. Ignoring, then, this waste on the field, the harm done to grain that is sprouting or milting, and the robberies from stack and threshing-floor, quay and warehouse, stable and nose-bag, and assuming that all the grain eaten is nothing better than average good oats (at 1s. 10d. a peck to-day), Sparrows cost us, on our 13,000 square miles of grain during the time the grain is mature, £800,000 per day. Even if my estimate of 3,000 Sparrows to the acre is above the average for the parts of the country far from towns, the cost of grain actually eaten by Sparrows on the field cannot be less than £4,000,000 per week.

Club Reports.

NORTHERN CREST CLUB.

Meeting, Feb. 14, at Sunderland. Mr. W. F. Swan presided over a good attendance. Balance sheet for 1916 was presented and showed a balance of £3 6s. 4d., 16s. above the previous year's, which proved very satisfactory. Officers for 1917 were elected. Pres., Mr. J. Ford Maling; vice-pres., F. W. Barnett, W. F. Swan, T. Robson, A. Lister, T. C. Crawhall, W. J. Taylor; chairman, W. F. Swan; vice-chair, T. Robson; committee, J. G. Hutchinson, J. Farrer, J. Riseborough, R. Armstrong G. Simpson, J. Stanger, R. S. Bewick, W. Forster, T. Bewick, J. Dickenson; auditor, J. G. Hutchinson; sec., G. Dobson, 103, James Street, Blaydon-on-Tyne. New members elected: Mrs. M. Montague Scott, London; Ed. Richardson, Shildon; Mrs. Thos. Taylor, Gateshead; F. Thwaites, Sunderland. A discussion arose about taking members in away from the North, but it fell, as there is no rule in the society where the line is drawn. In former years the society gave way to intending members in other parts of the country; so those wishing to join, and sending their names to me, will be proposed at next meeting. Membership is 2s. 6d., and 1s. entrance fee; all Crest fanciers are welcome.—Geo. Dobson, hon. sec., 103, James Street, Blaydon-on-Tyne.

NORTHERN BORDER F.C.

Meeting, Pillars Cafe, Pink Lane, Newcastle, Mr. Wm. Smith chair. The most important business was the electing of a sec. (pro tem.) to clear up the business of the club for the year previous to the annual meeting, first Wednesday in March, at 60, Neptune Road, Wallsend-on-Tyne, when it is hoped there will be a good muster. Our worthy and popular sec., Charlie Farrar, is out in France doing his bit, and I am sure all bird fanciers of his acquaintance will wish him good luck and a safe journey to Berlin and back. The winners of season's specials will be announced at next meeting. New members nominated: Mr. R. Lucas, and Mr. A. Linder; there is still room for more, and any Border Fancy fancier who cares to come along to our meetings will be sure of a hearty welcome. Correspondence for the present should be forwarded to J. Johnston, 60, Neptune Road, Wallsend-on-Tyne, sec., pro tem.

HORNSEY AND WOOD GREEN.

Annual meeting, Feb. 20, Mr. Griffin chair. Officers elected: President, Earl of Ronaldshay, M.P.; vice-pres., Messrs. A. V. Tuson, J. Hodder, L. Brady, and Ashton Pownall; chairman, Mr. James; vice-chair, Mr. Griffin; hon. sec. and treas., Mr. C. G. Martin; assist. sec., Mr. Twilley; committee, Miss Smith, Mr. and Mrs. Huggins, Dr. Huggins, Mr. Jones, W. H. Creighton, Mr. Pettit, Mr. Stephens. Meeting nights are altered to Wednesdays, and we hope members respond with a bumping entry at pair show next month (date will be announced). The sec. is giving a silver-plated teapot to members making most points at table shows this year. —C. G. Martin, hon. sec.

MIDLAND ROLLER C.C.

Meeting, Feb. 22, headquarters, "Seven Stars," St. John Street, Wolverhampton, Mr. Willows presiding over a crowded attendance. Members elected, Messrs. Cottam, Stephens, Evans, Beese, Billingham, Neve, Jennings, Stokes, North, Bailey, and Miss Dockery, making a total of 32 new members at two meetings.

The Federation scheme was again discussed, also a letter from Mr. Best. On being put to the meeting it was unanimously decided not to depart from the judging standard of the B.R.C.C. Annual show (fanciers please note) will be held Nov. 8-9, also other shows will be held in the vicinity of the Midlands; dates to be decided later. Members please note: Changing of meeting night from Thursday to the last Monday in the month until further notice. A presentation of a smoker's cabinet was made to the President by the members in acknowledgment of his services as judge at our two last shows. Business being ended, an interesting time was spent listening to some very good birds, the different tours being explained by Mr Rhodes. Next meeting March 26, several members promised to bring birds, and tours will be explained by Mr. Harper. I hope to have Novice Cup on view, also rules drawn up. I shall be pleased to communicate with fanciers wishing to join before Rule Book, 1917, in in print.—J. W. Thomson, sec., 9, Gorsebrook Road, Wolverhampton.

EDINBURGH C.B.S.

Meeting, Feb. 17, Cairn's Memorial Hall, Gorgie Road, with a large turn-out. New members admitted: Messrs. Feld, Smithyes, J. Munro, J. Carr, R. Weir, J. Montgomery, T. Anderson, R. Neil, J. Hilson, J. Lindsay, and H. Aitken. Two others were put forward as members: Messrs. G. Insill and Dom. Sec. read correspondence in relation to hall for annual show, Tynecastle Hall not being available this year, and a committee was appointed to see about a hall and report at next meeting. Judges for annual show were nominated, and the following were asked to give their services: Nor., Mr. C. Millar; Bord., Mr. Hamilton; Scotch Fancy, Mr. R. Menzies; Brit. and For., Mr. J. F. Dewar. Norwich, Border, and Scotch Fancy sections were left as formerly. British and Foreign sections were altered a little three Foreign classes being combined into one class. The matter of prize cards was left in Secretary's hand. A vote of thanks was given to Mr. Robt Craig, who judged the table show.

Nor. Pairs (17): 1, Clark; 2, Ritchie; 3, Stormont, 4, 5, Wall; 6, Charlton. Bord. (11): 1, 5, Napier; 2, Lindsay; 3, Clark; 4, 6, Hutchison. Crest or C.B. (2): 1, Smith, 2, Stevenson. Goldf. (5): 1, Watson; 2, Adam; 3, Munro. Linnet (5): 1, Clark; 2, 4, Watson; 3, Adam; 5, Rice. Bunting (2): 1, Watson; 2, Adam. Softbill (2): 1, 2, Watson. Siskin, etc. (4): 1, Adam; 2 Clark; 3, 4, Watson. A.O. Finch (10): 1, Watson, "Napier; 3, Munro; 4, Lindsay; 5, Adam; 6, Crosbie. Hen for Hybridising (5): All Adam. Muling Pairs (2): 1 Clark; 2, Rice. Hybrid (1): 1, Lindsay. Several members took part in the judging competition, and the prize winners were: 1, Wilkie; 2, Clark; 3 Smith.—J. C. Charlton, Sec.

Nests of Birds, Poultry, etc., should be regularly sprinkled with KEATING'S POWDER, especially when hens are sitting. Don't forget to do this just previous to the eggs hatching, to destroy the Red Mite. Kills all insects. Harmless to everything else.

CARDIFF C.B.S.

Meeting Jan. 21, Godfrey's Dining Rooms, Mr. E. J. Banks presided over a good meeting. Mr. A. Harrington was elected a Vice-President. A long discussion took place re purchasing cups, and it was agreed that this stand over until the annual general meeting. Nominations were taken for 1917 season. Mr. H. C. Smith and Rev. C. B. Jolliffe were elected auditors. Messrs. Bosley, E. Wan, H. Nowell, H. Hodges were elected members. Resolved that sec. write to all members who have joined the colours.—E. Thomas.

BACUP ROLLER C.C.

Annual meeting, Park Hotel, Bacup, Feb. 15, with only a moderate attendance, owing to the election being on same day. Report and balance sheet submitted, showing a balance in hand of £15 15s., which was considered eminently satisfactory. Officers elected: President, Mr. John Ormerod; Treas., Mr. J. T. Johnson; all members present to act as Committee; Mr. Geo. Johnson was elected Sec. Decided that we hold our annual open contest Nov. 23, 24. Decided, after a long discussion, that we join the Federation of Roller Clubs; will fanciers who intimated their desire to join please communicate with me? Subs. for 1917 will be as last year, 2s. 6d., entry fee 6d.—Geo. Johnson, Sec.

HIGHGATE, HAMPSTEAD C.B.S.

Judging competition and table show of Norwich Plainheads, Feb. 19, Spencer Hall, Dartmouth Park Hill, N.W. In the absence of Mr. Hodder, as final judge, a worthy substitute was found in Mr. W. H. Wills, whose exhibits at recent shows won the admiration of all present. A large number of members first judged the birds, their slips being handed to the Secretary, who compared them with the judge's awards. The winners proved to be Messrs. Stretton and Shearer, who tied. By a coincidence both members are successful Yorkshire breeders. The winning birds in each section were staged by Messrs. Walmsley, F. C. and A. Knight. A charming Crestbred owned by Mr. Kent met with no competition. Classes averaged 7. In according a vote of thanks to the judge, Mr. P. Johnston (chairman) complimented the members upon the excellent quality of the birds, remarking that an indifferent specimen was not present. Five new members were nominated. Next meeting, March 19, British table show and judging competition. Judge, Mr. H. Norman. The show promises to be a record one.—F. C. Knight.

SHETTLESTON C.B.S.

Annual general meeting, good Templar's Hall, Feb. 17, Mr. W. Lunn presiding. Balance-sheet for 1916 was adopted, which showed a good balance on the right side. Prize-money was paid to winners at annual show. Agreed to hold meetings on second Sat. of month. Office-bearers for 1917 elected: Hon. Pres., W. S. Boyd and Dr. Duntop, Pres., J. Hood; Vice-Pres., C. Divens and W. Carrick; Sec. and Treas., S. F. Wood, 4, Tolleross Rd., Parkhead, Glasgow. Committee, Messrs. N. Yule, J. Johnstone, J. Kirkwood, A. Wallace, and H. J. Johnstone, J. Kirkwood, A. Wallace, and H. Picken; auditors, N. Yule and J. Hood. Agreed to hold pair show second Sat. in March. Classification, yellow cock, buff hen, and buff cock, yellow hen in each of the following varieties: Crests, Norwich, Borders, cl., tkd., or var., Borders, green or cinn., Yorks., and one class for muling pairs. Entry 2d. per cage; judge, S. F. Wood. New members elected, Messrs. T. McGregor, H. Savage, W. Kennedy, and A. Mather. Decided to allow new members to show at pair show if subs. were paid by day of show. Fanciers wishing to join can have full particulars by applying to the sec.—S. F. Wood, Sec.

BIRMINGHAM ROLLER C.C.

Meeting, Feb. 21, Crown Hotel, Hill St., Mr. W. Pitman presided over one of the best attended meetings of Roller Fanciers held in Birmingham and District. New members elected, Messrs. Clarke, Ryder, Glasgow, Markham, Carpmail, Watson, France, Bridge, Wilson, Chantrey, Earnshaw, Woodall, Atkinson, Green, Pullinger, and Mrs. Bird, and there is every prospect of the club forging ahead. The meeting was given up to listen to the birds present, great interest being taken in the rendering of the bell glucke tour song by birds that had taken special for same this season, one bird singing it in two keys. Also we heard the new bell glucke; both styles were very good. Mr. Tomkins explained the different tours as the birds sang; next meeting we hope to have three birds present that have won first prizes this season. The meeting closed with a vote of thanks to the members that had brought birds to the meeting, also to Mr. Tomkins for explaining the tours. We hope new members will attend and make any suggestions with regard to making our future meetings both interesting and instructive; intending members should apply to W. Taylor, Hon. Sec., Council School, Hospital St., Birmingham.

A Useful Gardening Book.

"Vegetables and their Cultivation," Messrs. W. H. and L. Collingridge, Aldersgate St., E.C., 5s. This is one of the most concise and most useful works which we have had the pleasure of perusing, and is especially valuable at a time when everyone who is possessed of a piece of ground, even though it be only "a back garden," should make the most of his opportunities in producing food. With this manual, and a weekly journal such as "Food," the veriest tyro should be able to grow successfully an all the year supply for his own table. The directions are arranged in alphabetical order, so that reference to any particular vegetable is an easy matter, and the information given is subdivided under headings such as Uses, Soil, Manures, Propagation, etc., and the book is fully illustrated by actual photographs well reproduced. There are separate chapters on soils, manures, cropping, miscellaneous items, and pests and diseases. The latter chapter is illustrated by coloured plates, and is worth the price charged for the whole book. The only criticism we have to offer is that it would have been better to indicate the natural sizes of the vegetables shown in the photographs.

Readers are advised to use our Deposit System when dealing with Advertisers. See rules at head of small advertisements.

CLUB AND SOCIETY NOTICES.

ONE NOTICE of any forthcoming Society meeting inserted free. It must reach us not later than Tuesday morning's post. Specially printed Club Notice Postcards may be had free on application to our Manager. Secretaries should always use them.

Note.—Only the details asked for on our cards can be published. Such phrases as "a large attendance desired," etc., must not be included. Classification for forthcoming shows, appeals for new members, and any other matter in the nature of an advertisement will only be inserted it paid for at advertisement rates.

Attercliffe C.B.S.—March 8, Bodmin St. Schools, 8. Preparations for breeding.—D. Havenhand.

Ardwick and Manchester C.B.A.—March 6, St. Thomas's Schools, 8. Show arrangements, balance sheet, and auditor's report, and social.—A. E. Thorpe.

Abertillery C.B.S.—March 10, Prince of Wales' Hotel, 6.30. To pay prize money for pair show, fix date for next open show, etc.—Jas. Webber.

Ashton-u.-Lyne C.B.S.—May 1, P.S.A. Rooms, Albion Street, 8. Postponed meeting, ordinary monthly business.—J. Whitehead.

Bacup Roller C.C.—March 6, Park Hotel, Bacup, 7.30. Roller Fanciers heartily invited; subs. due.—G. Johnson.

Bowling B.F.A.—March 5, Barley Mow Hotel, 8. Usual business, and arrange another date for prize distribution and smoker.—J. Nicholl.

Bootle C.B.S.—March 6, St. Andrew's Hall, 8. Hints on the breeding season, by Mr. T. Evans, and important business.—A. E. Huyton.

Bristol E.C.B.S.—March 3, Glass House Hotel, 8. General business to choose annual show date, judge, colour foods, etc.—W. J. Norman.

Bolton C.B.S.—March 7, Church Inn, 7.30. Discussion on breeding.—J. Brooks.

Bradford East O.S.—March 3, Park Chapel Schoolrooms, 8. Special business.—J. Spencer.

Cheltenham C.B.S.—March 7, Lamb Hotel, 8. Table show and judging competition, Norwich Plainheads; final judge, Mr. C. Stubbs.—W. Pounsett.

Coventry O.S.—March 7, Dolphin Inn, Market Square, 8. Very important.—J. Kent.

City of Birmingham C.B.S.—March 7, Crown Hotel, Hill Street, 7.30. Arrangements for lectures, N.F. and open shows.—A. C. Shirley.

Croydon F.F.S.—March 7, Gun Hotel, Church St., 7.30. Special meeting to elect officers and arrange programme for 1917.—J. R. Goodlife.

Doncaster C.B.S.—March 11, Black Bull, 7.30. Presentation of cups, electing auditors, etc.—H. Lumby.

Dulwich and Peckham C.B.S.—March 6, Reindeer Hotel, Rye Lane, Peckham, S.E., 8. Experiences, general management, breeding Canaries, by Mr. Geo. Sands and Mr. C. H. Grendell; open debate to follow, fanciers invited.—W. Hodson.

Laisterdyke B.F.A.—March 7, Railway Hotel, 8. Business important.—J. Pownall.

Leeds Roller C.C.—March 3, Griffin Hotel, 7.30. Club business, judging exhibition by the Federation judges connected to the Leeds Club.—H. Best.

Lancaster C.B.S.—March 3, Market Hall Coffee Tavern, 7.30. General business.—H. Hoyle.

Leeds C.B.S.—March 3, Griffin Hotel, Boar Lane, 7.30. Pair show; judge, T. Baldwinson.—W. A. Wilson.

Liverpool B.B.A.—March 8, Oldham Hall, 8. Egg food making competition for novices; 3 specials.—T. R. Jones.

London & Counties A.C.B.—March 8, Victoria Hotel, Charterhouse Street, E.C., 7.30. Lecture by Mr. H. Norman; fanciers and friends will receive a hearty welcome.—W. Gilbert.

Leith O.S.—March 10, Liberal Club Hall, Leith, 7.30. Classification for annual show, etc.—J. A. Carr.

Loanhead C.B.S.—March 10, Mason's Arms, 7.30. Booking of hens and nomination of judges for show. —W. B. Smart.

Middlesbro' and Teesside C.B.S.—March 3, Crown Hotel, 6.30. Subs. and any other bus.—I. C. Deans.

Morley C.B.S.—March 6, Shoulder of Mutton, 7.—B. Cook.

Northern Border F.C.—March 7, Pillar's Cafe, Pink Lane, Newcastle, 7.30. Annual general meeting, season's specials, and other important business.—J. Johnston.

North Manchester C.B.S.—March 6, St. Stephen's School, Conran St., 8. General business.—A. Colley.

Nelson Roller Club.—March 6, Ambulance Hall, 8. Distribution of rings; short lecture on the breeding and management of the Roller Canary, by the Sec., followed by discussion; new members and friends invited.—J. Earnshaw.

Pontypool C.B.S.—March 10, headquarters, 6.30. Question of purchasing cup, and other important business.—W. D. Lewis.

Port Glasgow C.B.S.—March 6, Co-op. Hall, 7.30. Table show, matched pairs and Brit., 9 classes; judges, Messrs. S. McKay and J. Forrester.—T. Adair.

Queensbury C.B.S.—March 7, Granby Hotel, 7.30. —W. Jagger.

Rochdale Good Intent C.B.S.—March 7, Temperance Club, Toad Lane, 8. Business general.—J. W. Jackson.

Stanley Garden House F.F.C.B.S.—March 4, Club Rooms, 6.30. Balance sheet, fixing of date for next show, and other business.—T. Nicholson.

S.W. London C.B.A.—March 7, The Plough, St. John's Hill, S.W., 8. Pay prize money for pair show; address, "Preparing for the breeding season," Mr. J. Jeffrey; fanciers and friends welcome.—A. J. Nason.

Stoke-on-Trent C.B.A.—March 5, Victoria Hotel, 8. Paper by J. Glover, "The relation of a member to his Society"; subs. due.—J. Glover.

Scotland Gate (Choppington).—March 3, Social Club, 7. Election of officers, etc.—H. Seely.

Wigan Roller Club.—March 7, Legs of Man, 7. Business of special importance.—P. Greenall.

Wigan C.B.S.—March 3, Legs of Man Hotel, 7.30. Lecture on breeding.—J. McAndrew.

Yorkshire Union of C.B.S.—March 3, Market Tavern, 6.45. Balance sheet, sub-committee's recommendation, delegates' fees, any other business. —S. Midgley.

Bird-Lime and How to Make it.

So many enquiries are received from time to time asking for instructions how to make bird-lime that tht following particulars, taken from a curious old work published in 1799 and kindly lent us by a reader may be found useful.

BIRD-LIME is a viscid substance, prepared in different ways. The ordinary bird-lime is made from the bark of the holly, boiled for the space of ten or twelve hours, when the green coat, being separated from the other, is covered up and set in a moist place for a fortnight. It is, after this, pounded into a tough paste, so that no fibres of the wood are discernible, then washed in a running stream till no motes appear, then skimmed as often as anything arises, and finally laid up for use. When it is used, a third part of nut-oil, or thin grease, must be incorporated with it over a fire.

Substitutes for Holly Bark.

The juice of holly-bark is a very peculiar substance, but, if trials were properly made, it is highly probable that other juices might be found of an equally clammy nature. The mistletoe affords a juice superior in viscosity to the holly, and if a young shoot of the common alder be cut through there will be a stringy juice follow the knife, drawing out into threads like bird lime. In this wood it seems to lie in the veins within the circles on the heart rather than in the bark. Hyacinths also afford a tough, stringy juice within their roots, and so do the narcissus, the asphodel, and the black briony.

A Waterproof Bird-lime.

When twigs, etc., are smeared with bird-lime and put in places subject to wet, the common bird-lime is apt to have its force soon taken away. It is necessary, therefore, to have recourse to a particular sort, which, from its property of bearing water without being hurt, is termed "water bird-lime."

Take a pound of strong and good ordinary bird-lime, wash it thoroughly in spring water till the hardness is all removed, then beat it well, that the water may be clean separated, so as not a drop may remain; then dry it well and put it into an earthenware pipkin, and add to it as much capon's grease as will make it run. In this state of the preparation add to it two spoonfuls of strong vinegar, one spoonful of oil, and a small quantity of Venice turpentine.

Let the whole boil gently for some minutes over a moderate fire, stirring it all the while. Then take it off, and when there is occasion to use it, warm it and cover the twigs well with it. This is the best bird-lime for Snipes, or such birds as frequent wet places.

How to Lime the Twigs.

A successful method of using the common bird-lime is this: Cut down the main branch or bough of any bushy tree whose twigs are thick, straight, long, and smooth, without any knots or prickles. The willow and the birch are the best for this purpose. Let all the superfluous shoots be trimmed off, and the twigs be made neat and clean; cover them all well with bird-lime, within four inches of the bottom, but the main staff from which they grow must be left untouched with the lime. No part of the bark where the lime should come should be left bare, but if it be too thickly laid on it will give the birds a distaste, and, on the contrary, to use it too sparingly would let the birds escape, so that it is a matter of nicety to apply it properly.

When the bush has been properly prepared set it up in some dead hedge, or among some bushes near the skirts of a town or farm-yard, for these are the principal resorts of small birds in the cold weather. In the summer a quick-set hedge or grove, or white-thorn bush near fields of corn, hemp, flax, and the like, are more frequented. Let the sportsman imitate the chirp of such birds as he sees around the spot, or use a bird-call, which may be purchased for the purpose. The time for this sport is from sunrise to ten o'clock, and from one to sunset.

Queries Answered

(1)—*All questions must be clearly written in ink (or typewritten) on one side of paper, and conclude with either the correct name or a pseudonym.*
(2)—*The proper name and address in full of querist must always be written on a separate sheet of paper, and enclosed with the query.*
(3)—*Queries intended for different specialists must be written on separate sheets of paper.*
(4)—*Queries must not include or be included in orders for books, instructions re advertisements, or any other matter for publication.*
(5)—*The department to which the queries refer must be stated on the left-hand corner of the query.*
(6)—*Queries received during any week, up to the* **first post on Saturday morning**, *will be answered in the issue bearing date of Saturday in the* **following** *week.*
(7)—*If an answer by post is desired from our specialists, a postal order for sixpence must accompany any query relating to sickness of birds, or a shilling in ordinary enquiries, with a stamped and addressed envelope in either case. Dead birds must not be sent to the office (see Post-mortems).*
(8)—*All who desire letters of complaint written to advertisers must state grounds for doing so clearly and fully, and enclose a fee of sixpence.*
(9)—*All queries must be addressed to the* Editor, "Cage Birds," 154, *Fleet Street, London, E.C. Postcards are not admissible.*

CANARY QUERIES

Answered by CLAUDE ST. JOHN

ADDRESS WANTED.

W. S.—The address you require is "Briardene," Idle, Bradford, Yorks. You would find a list of all the best judges, etc., in CAGE BIRDS ANNUAL.

SQUEAKING NOISE.

Puzzled.—You do not give sufficient data to form any certain clue as to what is wrong. Does the squeaking occur at regular intervals after eating, does the bird seem distressed with the chest pulsating whilst it lasts, does it occur more at night than other times, or when there is a cold change in the weather, and does it eat well? All these are points which might help to throw light on what is the matter. Try the following treatment for a week or ten days and report result, and give the fullest particulars you can. Give a staple diet of plain canary seed, and in addition give separately half a teaspoonful of summer rape every second day, and on the alternate days either a morsel of banana, or a piece of bread not larger than a hazel nut, soaked in cold milk, drained, and sprinkled with soft sugar. In the drinking water add every second day for a week six drops of syrup of buckthorn and as much Epsom salts as will cover a sixpence. See that it is kept in a fairly comfortable temperature, not necessarily very warm, but as equable as you can manage it, just away from the chilly side, and quite free from cold direct draughts.

GONE OFF SONG.

E. Smalley.—Possibly the bird has got a chill, either from too free bathing during the recent severe weather, or, maybe, from exposure to cold draughts or rapid fluctuations of heat and cold. See that any or all of these probable causes are removed, keep the bird in a fairly warm temperature, where the heat is as equable as possible, and treat as follows. Give a staple diet of plain canary seed only, and give separately every second day about half a teaspoonful of well-boiled summer rape, and on the alternate days give a piece of bread the size of a hazel nut, soaked in cold milk, drained, and sprinkled with maw seed. A morsel of banana may be given two or three times a week in lieu of green stuff or other fruit. Add to the drinking water six drops of syrup of rhubarb and a crystal of sulphate of soda the size of a small pea every second day for a week, and after this give instead ten drops of lemon-juice and two of pure honey in the water two days in every three for a week. The fact of the bird singing is not necessarily conclusive evidence that it is a cock, though if the song is given in an uninterrupted strain, without breaks and snatches, and the bird well inflates its throat and the pulsation of it is pronounced as the song is produced, there is the probability that it is a cock, but it is by no means a certainty. Some hens sing very fairly, but as a rule the song of the hen is more of the nature of a more or less broken twittering.

CURIOUS BEHAVIOUR.

Drooped Wings.—I do not gather that there is much wrong with the birds, especially cocks, which go about now and again with the wings drooped and fluttering. It is by no means unusual for cocks to show themselves off in this way whenever they can see a hen at this season, and it is nothing more serious than spring turning their fancies in the direction of proposals. If your bird is in sight of the hen this may quite possibly be the case with him. Anyway, you may try the following treatment for a week or so, and then if there seems anything still wrong, write again and repeat full particulars as to any apparent symptoms of ill-health. See that he is not exposed to sudden extremes of heat and cold, nor to direct draughts, and note in particular whether he appears to be paying attention to a hen which may be in view. Give a morsel of banana in preference to apple every second day for a week, and on the alternate days give a morsel of bread and milk sprinkled with soft sugar. Otherwise continue your present dietary. In the drinking water for three consecutive days add six drops of syrup of buckthorn and as much Epsom salts as will cover a sixpence, and afterwards give instead six drops of tincture of gentian and four of dilute sulphuric acid every second day for a week. A fairly warm temperature, but not a heated one, would suit it best for a few days until it has pulled itself together if the looseness should be due to it being out of condition.

BREEDING IN AVIARY.

F. Spink.—The aviary you describe is really only a fair-sized cage, and the limit of its accommodation is three birds, say, a cock and two hens, and if this number were turned in for breeding you would need to remove the successive broods as they became quite able to cater for themselves to prevent overcrowding. On the whole it would really be better to limit the inmates to one cock and one hen, as if two hens are used they not infrequently make a hash of things by interfering with each other's nesting arrangements, or both wanting to sit in the same nest, etc. I am not quite clear what you mean by wanting to breed with a cock and hen once, and then breeding those two with a few other birds. If you mean mating these two originals with any of the progeny this season you will certainly not be able to do it, as the young would not be fit for mating before next spring, besides which there are other material objections to mating such closely related birds without some very definite object in view. Then you go on to ask if I can suggest any nice coloured birds to breed with, but do not say what class of birds. If you mean Canaries, you can get practically all varieties of colour and markings we have in Canaries in the Norwich, Yorkshire, Crest, Border Fancy, or Roller. To make a pair for a beginner I would suggest a clear buff and a lightly ticked yellow, which would probably breed a majority of clears, or nearly so. On the other hand, if you mean nice coloured British or Foreign birds, then my advice, considering your accommodation, is to drop the idea and limit your operations at present to the one pair of Canaries. To pair them, put in a partition of the cage, place the birds one in each division, and leave them so until you see the cock calling the hen to the wires and feeding her with tit-bits, and frequently singing furiously at her through the wires. Then, if the hen is very active, and responds promptly to his calls, towards the end of March you may remove the partition and let them go on with their business according to their own ideas. Do not be too anxious to get them together until they really show signs of wanting to begin nesting, and when together do not be too curious or meddlesome with their affairs. You should get our manager to send you a copy of "Canary Breeding for Beginners," 7d., post free, which will prevent you making many mistakes.

ALWAYS MOULTING.

New Reader.—(1) There is rather too much linseed in the sample of mixed seed you enclosed, but beyond this there is very little fault to be found with your general treatment. The continual state of moult which you describe is practically always due to exposure to direct draughts, damp, or frequent fluctuations of heat and cold, and the only one it seems to me your bird may be subject to is rapid extremes, and perhaps some draughts from being too near the glass of the window. You should look into these exciting causes and see if any of them are present, and remove them at once if any of them are present. A comfortable and equable temperature, not necessarily very high, but just off the chilly side, would help it to recover its normal condition. Having seen to these points, treat as follows for a month or so. In addition to the staple diet of plain canary seed, give half a teaspoonful of scalded summer rape every third day, and on the intervening days give first a pinch of the seed mixture and a morsel of banana, and next a piece of bread the size of a hazel nut, soaked in cold milk, drained, two drops of cod liver oil emulsion on it, and sprinkled with soft sugar. If you can make the following slight alterations in the seed mixture do so, i.e., reduce the proportion of linseed by two-thirds, and double the quantity of white millet. In the drinking water add six drops of syrup of rhubarb and a crystal of sulphate of soda the size of a small pea every second day for a week, and for the remainder of the month give instead 20 drops of the following mixture two days in every three. Mixture: Dissolve half a drachm of ammoniated citrate of iron and quinine in an ounce of sherry, add 20 drops of syrup of buckthorn, and add 20 drops to water as advised. Offer the bath three times a week now the weather is getting milder, and the bird will probably soon take more freely to it. (2) The slightly dirty appearance of the bird around the neck is a certain griminess which is quite common on birds kept in cages which do not bathe freely; and voluntary bathing on the part of the bird is not sufficient to remove it. Only handwashing would do so. (3) The seeds of which you send samples are all of first-rate all-round quality. The canary seed especially is excellent.

MOULTING AND MATING.

Ex-Cpl.—(1) Keep the bird in a cosy part of the room, and in addition to the staple diet give a morsel of bread and milk with two drops of cod liver oil emulsion on it, and sprinkled with soft sugar every second day, and on the alternate days give a morsel of banana, and a pinch of the seed mixture advised to "Foundry, D.S.M." in this issue. In the drinking water add six drops of tincture of gentian and four of tincture of steel every second day. Continue this until the feathers have quite ceased dropping. There is no reason why the bird should not be quite ready for mating by the end of March or beginning of April. The latter date will probably be quite early enough this year. (2) You will certainly get a much improved type of songster from the Yorkshire-Roller cross, which should also prove good, free singers. It would, however, be a decided advantage if you could place the young cocks under a good singing Roller cock for tuition, instead of allowing the Yorkshire cock to do the training. (3) No, it is not necessary to give the cock any change of diet or medicine after taking him away from the first hen before mating him with the second one. (4) After removing him from the first hen you may mate him with the next hen in a day or so if she is ready for him. There is no vital necessity to give him a certain length of rest, but if he is not immediately in request a few days may be given him alone. (5) Yes, if the hens get to work promptly, it is quite possible to get two nests from each of two hens from the same cock in one season. This should be quite easily accomplished.

MATING BIRDS.

Blackie.—(1) The bickerings you refer to are, I expect, chiefly amongst the cocks, and there would be no objection at all to transferring them to the one end of the breeding cages they are intended to occupy for breeding, assuming, of course, that the breeding cages have already been properly prepared for the season, and keeping them there until it is near the time to start mating up. It would be best if you could so arrange it to keep the hens in the aviaries until near the middle of March, but if this is too inconvenient you may, as you suggest, keep them in the breeding cages beside their respective mates, but separated from them by the wood slide. Birds in this condition will not require much feeding up for breeding. If you commence to give a little extra feeding about the middle of March, and mate at the end of that month or the first week in April, it should be all that is needed. (2) The aviaries would each accommodate two hens and one cock, but they need to be of a sociable temperament to succeed very well, flying loose in these cage-aviaries. It would also be necessary to remove the young of each brood as soon as they could quite cater for themselves to prevent them unduly interfering with the nesting arrangements of the hens. It would probably succeed better to keep in the divisions with a hen in each end compartment, and the cock in the centre. Mate him with each hen in succession, and when they have gone to nest shut him off in the centre again, and leave the hens to hatch and rear the young by themselves, and when ready also use the middle compartment for the young when the hens begin nesting again. (3) As regards allowing the birds to choose their own mating time, you might possibly risk this if the prospects are for a few weeks of settled weather about the middle of March. But you must know there is a risk.

SONG AND MOULTING.

A Young Novice.—(1) Yes, the Roller hen certainly has a great influence upon the singing qualities of the progeny, and consequently if you are aiming at producing a really good strain of songsters you must be just as careful to see that you use only hens of a good singing strain as you are of avoiding cocks from a strain with serious defects in their vocal abilities. (2) It would be utterly useless trying to breed with the hen whilst she is moulting. You should first of all see that she is not exposed to direct cold draughts, or rapid extremes of heat and cold, which are the commonest causes of this moulting out of the proper season. Keep her in a moderately warm temperature, but do not overdo it, and see that the warmth is as equable as you can manage it, and, above all, avoid direct draughts. Give a staple diet of two parts canary to one part summer rape mixed together, and in addition to this give separately every second day half a teaspoonful of a mixture of equal parts hemp, niger, white millet, teazle, and broken groats, and also a morsel of banana, and on the alternate days give a piece of bread the size of a hazel nut, soaked in cold milk, drained, two drops of cod liver oil emulsion on it, and sprinkled with soft sugar, and on these days add to the drinking water six drops of dilute sulphuric acid and four of tincture of steel. Continue this treatment for a month if necessary, though you may stop it sooner if the moulting has quite ceased. Do not mate the bird until the feathers have quite ceased dropping for three weeks at least. Your Mule query should have been written on a separate sheet. See Mr. Norman's column for reply.

CANARY QUERISTS

should consult St. John's "Canary Breeding for Beginners" (7d.); House's "Canary Manual" (1/2); Battye's "Yorkshire Canaries" (1/1½); House's "Norwich Canaries" (1/1); Weston's "Stock Book" (7d.); Dr. Clarke's "Septic or Bird Fever" (7d.); Norman's "Aviaries, Bird-rooms, and Cages" (2/3); Ramsden's "Colour-feeding" (3½d.); "Seeds and Foods for Cage Birds" (1/2); or the "Nutshell" booklets (2½d. each): No. 5 "The Pet Canary," No. 6 "Ailing Birds and How to Cure Them," No. 9 "The Disinfection of Cages, Bird-rooms, etc.," No. 10 "The Roller," No. 23 "The Border Fancy," No. 24 "Green Canaries." All thoroughly practical and instructive. Prices quoted are post free, from "Cage Birds," 154, Fleet Street, London, E.C.

MYSTERIOUS DEATHS.

J. R.—Sorry, but I cannot even hazard a guess at the cause of the deaths of the pair of birds which you mated on the 14th Feb., doubtless in compliance with the old superstition that this is the date on which the birds mate naturally, and which both appeared in robust health at the time, but were both found dead in the cage two days later. As these are the only two affected it does seem a wee bit strange, but you give me not the slightest clue upon which to found a guess—and it could be nothing more in such a case. Let us hope they did not funk the weighty prospect of the family cares to come. The only thing that could be of any use at all in such a case would have been to have had a proper post-mortem on the remains of one or both of the birds.

SOFT-SHELLED EGGS.

Three Bad Bargains.—(1) I have no doubt whatever that the hen is a naturally delicate and weakly subject, and is not one I should consider a suitable stock bird at all if there was any means of replacing her with a more robust bird. The laying of soft-shelled eggs in every clutch shows an abnormal condition, probably of an inflammatory nature, of the lower part of the oviduct. Try the effect of a morsel of bread and milk dusted with chlorate of potash about every third day for the next three or four weeks, and after mating when she appears about going to nest, add 20 drops of chemical food to the water ever second day for a fortnight, and on the alternate days add instead a small teaspoonful of lime water to each ounce of the drinking water. (2) For a bird recovering from congestion of the liver you could not do better than keep it quite on the warm side, give a staple diet of plain canary seed, and a morsel of bread and milk sprinkled with soft sugar every second day, and on the alternate days half a teaspoonful of scalded summer rape. In the drinking water you might add an aperient, such as a crystal of sulphate of soda the size of a small pea with six drops of dilute sulphuric acid three times a week for a fortnight or so, or sufficiently often to keep the droppings of a normal consistency.

LOST VOICE, ETC.

Novice, W. D.—(1) The best you can do for a hen that has lost her voice is to remove the exciting causes of the condition by seeing that she is not exposed to direct cold draughts, sudden extremes of heat and cold, and not to allow it to hang near or over burning lights in the evenings. Then, in addition to the staple seed diet, give a morsel of bread and milk the size of a hazel nut, with two drops of cod liver oil emulsion on it, and sprinkled with soft sugar, every second day for a fortnight or so, and on the alternate days give a morsel of banana and half a teaspoonful of scalded summer rape seed, and add to the drinking water ten drops of lemon juice, two of pure honey, and as much chlorate of potash as will cover a sixpence. Keep the bird fairly warm, but let the warmth be as equable as possible, and do not overdo it. (2) Without some little data to go upon I cannot have any opinion at all about a bird panting. Such a symptom may be due to serious bronchial trouble or merely over-fatness, to name only two of many probable causes. You had better repeat this query with full particulars of all symptoms exhibited and the way you feed and treat generally and where you keep the birds affected. (3) If in good robust health and not mated too early birds really require little extra feeding before mating. In addition to the staple seed diet commence about the beginning of March to give the cocks a little egg food, or any substitute you may use, twice a week, and a small teaspoonful of seed mixture on two other days, and after the first week increase the frequency to every second day for each, so that one or the other is given every day, and begin at this time to treat the hens the same as you did the cocks during the first week. Give a little green food every second day, and to any that seem backward in condition search out crisp young dandelion, which you will find in sheltered corners and on the warm side of ditches, etc., and give this daily, or every second day, as green food, according to the apparent backwardness of the bird in question. By the end of March they should be in good condition for mating. For rearing the young give the usual seed diet, and add egg or soft food in moderately small quantities fresh at least twice a day. Begin to give green food when the young are about four days old; from this time onwards give a fresh supply morning and afternoon. For all the details from egg to perch, which cannot be given here, get our Manager to send you a copy of "Canary Breeding for Beginners," post free for 7d.

HOW TO FEED.

W. J. P.—(1) For general diet, in addition to the staple of canary and rape, which is quite correct, give about half a teaspoonful of a mixture of equal parts hemp, niger, white millet, teazle, and broken groats twice a week, and on one or two other days, according to condition, give a morsel of egg food or bread and milk sprinkled with soft sugar, or occasionally as a change with maw seed. In winter give a morsel of sweet fruit two or three times a week, and when green salads can be readily obtained a morsel of some greenstuff daily in summer, and two or three times a week in spring and autumn. (2) See that this bird is not exposed to cold draughts, keep in a fairly comfortable temperature, which is equable, and give a morsel of bread and milk with two drops of cod liver oil emulsion on it, and sprinkled with soft sugar, every second day for a fortnight, and on the alternate days add to the drinking water four drops each of oxymel of squills, ipecacuanha wine, and sweet spirit of nitre, and give a morsel of banana. If bird is not quite well in a fortnight write again and repeat particulars. (3) The best book to put you on the right road is undoubtedly "Our Canaries," which you will see advertised on back page very often now. The best cheap books for your purpose would probably be "Canary Breeding for Beginners," 7d., post free, or for information on the different breeds, House's "Canary Manual," 1s. 2d. post free, both from our Manager.

BRITISH BIRDS, MULES AND HYBRID

Answered by H. NORMAN.

THRUSH LOSING FEATHERS.

J. Brooks.—It appears your Thrush is having a soft moult, caused probably by being placed in a draughty position or by sudden changes of temperature, say, from a hot room to a cold one. I scarcely think your food, composed as it is mainly of pea meal and hemp seed, is a suitable one for a Thrush, A Skylark might do on it as he has a stronger digestion. Anyway, I would advise a change of food; you could make it with the egg and milk, but use wholemeal flour instead of the pea flour and hemp, and give with it a little grated carrot or chopped watercress. Also let the bird have a piece of apple or other soft fruit. You can continue with the mealworms or other insects that you can procure. Keep the bird in as even a temperature as possible, not in a hot room or one where the gas is constantly burning. You could give him the bath on fine days, letting him have it in the early part of the day.

FEEDING A GOLDFINCH.

"Spink."—Occasionally one gets a Finch that is very difficult to feed, such birds preferring their own choice of seed to the one the owner considers best for them. I would advise you to feed your bird as you are doing (by the way, you do not give me the proportions), but limit the niger, as I do not consider this to be a desirable seed to give in any quantity. The other three seeds are good, particularly the teazle and thistle, and although it would be desirable to add a little canary and hemp I would advise you not to mix these with the others, but give a little of each in a separate pot, or in a corner of the cage. Then if in time he eats them, they could be added to his staple mixture. It is so seldom any of the Finches refuse hemp seed that it makes me wonder if your seed is of good quality. Just crack a little and see if the kernel is white and plump; if not, procure some fresh from a different source. Lightly crack it for the Finch, and do the same with sunflower seeds—anyway, until he will crack it himself.

A MIXED COLLECTION.

Birdmad.—Your aviary would hold all your birds, but I would not advise you to put in the pair of Budgies, and you had better confine your collection to one sex—an odd hen or so would only cause trouble. As you have kept your birds inside all the winter, I would not advise you to turn them out until the end of March, and then only if the weather is fairly settled. Any that are not in good condition then had better be in the cold room for another week or so.

MATING GREENFINCH AND BULLFINCH.

S. Wells.—The Greenfinch-Bullfinch Hybrid is a very desirable one to breed if you can manage it. If the birds are on good terms, do not interfere with them, let them be together, and when the hen shows signs of wanting to nest, which she will probably do in April or May, give her a nest box and some short lengths of hay moss and hair, or, better still, supply her with an old Finch nest. Keep the perches low and cover the floor of the cage with some soft material, such as moss or fibre, as sometimes they drop the eggs from the perch in the early morning.

GETTING FINCHES INTO CONDITION.

Revivor.—I do not believe in hurrying birds into condition early in the year, especially when they are healthy and doing well; the longer days and better atmospheric conditions do more to bring them into song than any particular seeds. As regard your Linnet, it appears to me that he is doing splendidly, and if he belonged to me I should soon expect his chatter to break into a song, but if you would like to hurry matters, give a little cracke

hemp daily, a spoonful of soaked seeds three days a week, and a leaf of dandelion. Your Goldfinch is certainly backward, but then these birds are late breeders when at liberty. Your feeding is pretty good, and I would not feel inclined to alter it; give dandelion, and keep a sharp look-out for the early seed pods, and let him have a good supply when obtainable. If he will eat mealworms offer him one occasionally. Give him the following tonic: 3 grains of the crystals of citrate of iron and ammonia in one tablespoonful of water, night and morning, for a week.

LINNET WITH EYE TROUBLE.

A. T.—I fear you have waited too long before seeking advice about your Linnet; had you attended to it when first noticed, it would possibly have recovered. You do not say if the bird is blind in the affected eye, although by your description I should imagine it was. I would advise you to bathe it in a little warm water with a few drops of laudanum in it; this will ease any pain and give the bird great relief. Feed as you are doing, adding greenfood when procurable, and give the tonic advised to "Reviver" in this issue. I have seen a similar case, and although the bird lost the use of the eye, he bred Mules. You are feeding your Chaffinch quite right; all I can suggest is a little soft food with a spoonful of ants' eggs in it, and give green-fly as soon as obtainable. You could also offer soaked seeds three days a week, and let him bathe when the weather is suitable. Get our Nutshell on the Chaffinch, 2½d. post free, from our manager.

BRITISH BIRD & HYBRID QUERIST

should consult Houlton's great work, "Cage-Bird Hybrids" (7/6); Norman's "British Bird Manual" (2/3); or Part 1 "Hardbills" (1/1), Part 2 "Softbills" (1/1); "Aviaries, Bird-rooms, and Cages" (2/3); "Seeds, Foods, and Wild Plants" (1/2); "Secrets of Hybrid Breeding" (1/2); Clarke's "Septic or Bird Fever" (7d.); "Colour-feeding" (3½d.); or the "Nutshell" booklets (2½d. each); No. 1 "Goldfinch," No. 2, "Linnet," No. 3 "Skylark," No. 4, "Song Thrush and Blackbird," No. 11 "Bullfinch," No. 13 "Chaffinch," No. 15 "Greenfinch," No. 22 "Siskin, Redpoll, and Twite," No. 25 "Small Insectivorous Birds," No. 26 "Large Insectivorous Birds," No. 6 "Ailing Birds and How to Cure Them," No. 9 "Disinfection of Cages, Birdrooms, etc.," No. 12 "How to Moult British Birds." All thoroughly practical and instructive. Prices quoted are post free from "Cage Birds," 154, Fleet Street, London, E.C.

BREEDING LINNET MULES.

A Young Novice.—Your birds should not be ready to nest until April, and therefore you should not be in a hurry to get them into breeding condition. If they are both healthy I would advise you to simply feed them as you are now doing, but you might give a spoonful of soaked seed two or three times a week, and a pinch of maw seed occasionally. I presume you are using some kind of green food; you will in a week or so be able to get young dandelion leaves, these should be used as they are very helpful, and are much better for the birds than giving them a lot of hemp or other forcing seeds.

BIRDS FOR AN AVIARY.

Schoolboy Fancier.—I would advise you to have all cock birds in your aviary, and you would find Finches and Buntings interesting and least trouble to feed and attend to. Your collection might be composed of two Goldfinches, one Bullfinch, a Linnet, Greenfinch, Redpoll, Siskin, Yellow Bunting, Reed and Cirl Buntings; these would give you plenty of song and be bright to look at. If you could fix up one or two small branches it would improve the look of the aviary, and the surroundings would appear more natural to the birds.

A FIGHTING GOLDFINCH.

E. Townsend.—I expect you have made too much of a pet of your bird, and like some pampered animals he has become bad in temper. The treatment I would suggest, if you can manage it, is to let him fly in a large aviary, and feed on a rather lower diet, or an abundance of wild food. If you cannot do that, put him in one of the compartments of a double breeding cage, and the Bullie hen in the other, with a wire slide between, then limit his diet somewhat, and do not take any notice of him beyond giving food and water, and when the hen is ready to go to nest run him in for an hour or so night and morning. If the bird is healthy and in condition, I see no reason why he should not breed if the hen takes to him.

WHAT BIRD?

W. R. W.—The bird you describe is the Redwing; they are winter visitors to these shores and have been particularly plentiful this year, having been driven here probably by more severe weather further north. It is probable you have seen them before in your district, as they would be almost certain to visit you every year, but possibly you did not notice that they were different from the ordinary Thrush. We have had quite a number of them here in Surrey this year. (2) The "Cock of the North" is the Bramblefinch.

IN-BREEDING:

WHAT IT IS, AND WHAT IT DOES.

FOREIGN BIRDS.

Answered by WESLEY T. PAGE, F.Z.S.

AVIARY FOR BUDGERIGARS.

P. G.—The chief fault of your outdoor cage is its shallowness from back to front, in consequence of which the wood back will always be more or less damp owing to rain, etc., being blown in and saturating it, and also the branches on which the birds perch, and any food in vessels placed against it. It would improve the aviary to have the whole of the roof covered except the end six inches, and if a perch be arranged under the open part the birds could get a rain bath whenever they chose. If you provide a portable cover for the front during the winter months—it need only be used during wet periods—they should be quite comfortable and snug during the winter. There is another alternative: a wooden screen a little higher than the aviary, fixed three feet away from it, would check driving winds and rain and be valuable at all periods of the year. You have space for three breeding pairs, but I advise only two pairs, as then the accommodation for any young you may rear will be greater. The outside of the back and shelter end, front, and roof should be well tarred so as to keep the aviary cage as dry as possible. I look upon the roof extension named above as a necessity, and if the situation is at all an exposed one, the screen is also. The dietary you name will about meet the case. When in season the flower and seed heads of any kind of grass is the best green food for them: even with the roof covered in you might have grass growing inside the aviary right along the front. It would get ample moisture except during very dry periods.

AMAZON PARROT SCRATCHING ITSELF.

R. W. C.—While very pleased to hear of the improvement in your bird, I was also greatly amused. Most certainly bathing or washing the head with glyco-thymoline would not have the desired result, as it would probably set up a slight smarting on the bare parts and cause the bird to start scratching at once; whenever I advise the use of glyco-thymoline it is for bathing, spraying, or cleansing the nostrils only. A tepid weak solution of Condy's Fluid is excellent to use for the bath solution when spraying the bird at all periods of the year.

RED-HEADED FINCH BALD.

S. W. B.—I am very pleased that you succeeded in getting your hen bird into good plumage again, and also regret that the ardour of the cock makes him too loving a husband. You will have to separate them again and renew the treatment; when the plumage is again perfect, if you can give them a cage double the size of the present one and fit it up with a nest box and perches at either end only, so that they must fly to get from one to the other, they will probably begin breeding, and under the stress of domestic duties the cock will have less time for preening and plucking his spouse's plumage. Keep her warm at present, and give her a dose of fluid magnesia (one teaspoonful) once a week, and half a teaspoonful of chemical food twice a week, in the drinking water, and she will soon pick up again. In the aviary this plucking is a rarity, but when caged, and also during importation, very many of the "small Ornamental Finches" so pluck their mates, and the only course is to separate them till the plumage is renewed. The present male may not act so all the year round. It is the ardour preceding the breeding season.

AMAZON IN BAD PLUMAGE.

Miss E. W.—I cannot help you as I would like, as you say nothing about how the bird is fed and treated generally. Every fourth day put one teaspoonful of fluid magnesia in the drinking water, and on the intermediate days well colour the water with chemical food. Give daily a little honey and borax thinly spread on bread, biscuit or plain cake, whichever the bird will eat most freely, and in the same manner give cod liver oil emulsion—say, the former in the morning, and the latter in the evening. Before I can prescribe any direct treatment for the swelling, I must know something of its character. Is it merely a fleshy swelling, or does it show any evidence of developing into a festering sore? If you will supply the information asked for I will try and help you more definitely.

DESCRIPTION OF RED-HEADED FINCH.

E. P. M.—The Red-headed Finch is a sort of glorified Cutthroat or Ribbon Finch. It is fully half as large again as the Cutthroat. The whole of the head is brick-red; the body colouring is similar to the Cutthroat but slightly greyer; the underparts are regularly covered with cream-coloured blotches margined with black. The hen has no red on the head, and blotches of the underparts not so well defined as those of the male. I do not know of any record of them having bred in cages in this country, but many have been bred in English aviaries. Both sexes are quite ready to pair up with a Cutthroat in the absence of a mate of their own species, and very pretty hybrids are the result. I have referred your query re "Canary Hybrids" and "British Birds" to the Editor.

BUDGERIGARS THROWING OUT EGGS.

A. C. Moore.—There are several causes which may contribute to this such as frequent disturbance, odd unmated birds, mice, or the presence of a pugnacious pair, but if none of the above causes exist, your query is somewhat of a conundrum, and I have more than once put down such conduct to sheer cussedness; there would seem to be some disturbing cause, either in their surroundings or their demeanour. If you are speaking of recent occurrences, the severe weather may have been the cause. Probably as the weather becomes more congenial their unnatural behaviour may not continue. There is one precaution you may well take: well soak the husk, or husks, in hot (boiling) water, and as soon as dry replace them. However, you tell me nothing about how and where they are kept and treated, if you supply this information I may be in a position to give you a more helpful reply.

KEEPING AND BREEDING BUDGERIGARS.

Young 'Un, Novice.—In future you must enclose name and address or we cannot give you a reply, see rules on this point. Budgies and other foreign species have their own ideas as to the proper season for breeding, and often decline to defer to human judgment and try to breed in our winter, that being their proper season in their native haunts. In such case they must be coerced by separating the sexes and removing the nest receptacle. They should and can be allowed to breed how and when they please between April and October inclusive. Canary and white millet seed, with a "dash" of white oats, forms a good staple mixture. Grit and cuttlebone must be regularly supplied. When feeding young keep a tin of broken biscuits in the cage, and supply as much seeding and flowering grass as they care to eat; at this time they also are very fond of a millet spray. If you purchase a pair now, put them into their quarters at once, and hang up a couple of cocoanut husks for them. When in breeding condition the cere surrounding the nostrils of the male is bright blue, that of the hen may be anything from cream colour to dark brown. The roomier your cage the more probable are your chances of success. Flowering and seeding grass means the flower and seed heads of any kind of grass, from the ordinary lawn grass to any kind that grows in hedgerow or meadow. If a hen is egg-bound, put her in a small cage and stand the cage on the top of the kitchen range till the egg has been laid. Note replies to other queries, and get our Nutshell "Budgerigars," 2½d. post free, from our manager.

FEATHER PULLING.

W. H. S.—Very often feather pulling is the result of improper feeding. I recommend you to get our Nutshell, "The Grey Parrot," 2½d. post free from our manager. In some cases it is a vice, and is then practically incurable. However, cease giving milk, and treat as under, and in time there may be some material improvement, if not actual cure. Put one teaspoonful of fluid magnesia in the drinking water every fourth day (leave the water continually in the cage), and on the intermediate days lightly colour the water with chemical food. Also lightly dust the daily supply of boiled maize with flour of sulphur—this treatment must be persevered in, as a cure will be a work of time. As the weather gets warmer spray it twice a week with tepid water containing a little quassia essence: even in winter it may be sprayed almost weekly by choosing a genial day as opportunity offers, and keeping the bird carefully out of draught, and cold air till the plumage is dry. Also supply ripe fruit daily (apple or banana at this time of year), it can have a few nuts, also dry crusts, biscuits, and a little plain cake. Get the book referred to above, and as soon as possible, and get your bird on to the diet given therein, but the change must be gradual and not sudden. Report progress with full details about two months hence.

FOREIGN BIRD QUERISTS

should consult Page's "Foreign Birds for Beginners" (1/1½); Arthur's "Budgerigars and Cockatiels" (6d.); Arthur's "Parrots for Pleasure and Profit" (7d.); "Aviaries, Bird-rooms, and Cages" (2/3); "Seeds, Foods and Wild Plants" (1/2); Dr. Clarke's "Septic or Bird Fever" (7d.) "Colour-feeding" (3½d.); or the "Nutshell" booklets (2½d. each): No. 6 "Ailing Birds and How to Cure Them," No. 9 "The Disinfection of Cages, Bird-rooms, etc.," No. 14 "Gouldian Finches," No. 16 "Avadavats," No. 17 "The Grey Parrot," No. 18 "Budgerigars," No. 19 "The Pekin Robin," No. 20 "Warbills." All thoroughly practical and instructive. Prices quoted are post free from "Cage Birds," 154, Fleet Street, London, E.C.

MORE TROUBLE WITH BUDGERIGARS.

Boy Roy.—I do not keep queries by me, and before I can give you a helpful reply you must tell me how and where you are keeping them, and the size of your aviary and cage. In the meantime you must take out the odd cock, as the sexes of adult birds must be equal for you to have any success, especially in smallish quarters, and I opine some of your present trouble arises therefrom. Presumably you lost the hen bird from egg-binding owing to a chill. However, I have had Budgerigars in my own aviary guilty of similar annoying procedure, and several clutches have been wasted, but later they settled down to serious nesting and reared a good number in the later part of the season. It might help matters to rearrange the husks and place them as far apart from each other as your space permits—of course, you will not move any husks containing sitting birds. The husk opening (entrance) should face the light. If you get another hen to mate up with your odd cock, keep them together in a cage for about a fortnight before turning them into the aviary; and if there are any birds incubating you had better wait till the young are fairly fledged before putting in new birds. (See also replies to other correspondents.)

EGYPTIAN QUAIL.

Reppiks.—(1) I expect the Quails offered you are the common migratory Quail, and they require similar accommodation to domestic poultry, but the run should be covered with wire netting of one inch mesh. There should be a dry sand heap for them under cover, and their run should be grassed, or sown with canary seed and various cereals. Also a small spreading evergreen bush (berberis is good) is an advantage for them to shelter under. (2) Chicken mixture to which a liberal portion of canary and millet seed has been added will about meet their needs. They will also eat a little moistened chicken meal, and will devour any insects, worms, beetles, and their larvæ that you can secure for them; but they will thrive on seed and green food alone with what insects they can secure for themselves in a grassed run. (3) They are usually wild and dash upwards when disturbed, so it is well to keep the flight feathers of one wing well cut continually. If given the accommodation indicated above, they should do well with you and live long.

GREY PARROT UNEASY.

M. S. Adcock.—There is not much wrong with your bird, but it is probably suffering from the effects of the milk sop and animal food. If it has been accustomed to these for a considerable period you must not cut them off suddenly, but it will be to the advantage of its health generally if it is weaned from them as quickly as possible. Put one teaspoonful of fluid magnesia in its drinking water every fourth day, and on the intermediate days lightly colour the drinking water with chemical food. To thoroughly clear the mouth and throat of all slime, etc., give it a little honey and borax, lightly spread on biscuit, bread or plain cake daily, so long as the contents of the ordinary small box lasts. When milder weather comes, lightly spray it twice a week with tepid water containing a little quassia essence. When you receive the "Grey Parrot" Nutshell, it will be well to get your bird on to the diet advised therein, but some birds sulk at a changed dietary, and to force it upon them at once would mean short rations, which must be avoided.

BUDGERIGAR WITH SWOLLEN JOINTS.

S. H. Wrightson.—I have carefully considered your query and consider that the best course—the kindest course would be to painlessly destroy it. If you do not wish to destroy it, then soak its legs and feet in hot water (as hot as you can bear your hand in), dry with a soft cloth, and paint with tincture of iodine so long as there are no open sores. When the latter occur, the legs and feet must be cleansed daily with tepid water and then anointed with spermaceti ointment. I, however, can hold out little hope of a cure being effected.

CARDINAL WITH FEATHERS TURNING OUTWARDS.

Puzzled.—Such cases are not as uncommon as you appear to think, and I am afraid you will have to put up with its unsatisfactory appearance till the next moult, when probably the plumage will be normal. Your diet is quite satisfactory, but I advise the omission of hemp from the seed mixture. It will tone the bird up generally if you put it on a course of magnesia and chemical food for a few weeks. One teaspoonful of the former in the drinking water twice a week, and half-a-teaspoonful of the latter, also in the water, on the intermediate days. Shall be interested to hear how the bird progresses.

TREATMENT OF ZEBRA FINCHES.

Esperance.—There is no Nutshell on the Zebra Finch, but they are described, and food, etc., given, in my "Foreign Birds for Beginners," 1s. 1½d. post free, from our manager. I have already stated all there is to be said about keeping them with your Budgies; must refer you to my last two replies. Your aviary should now be much more cosy, and the occupants ought to be very comfy even in the present acute weather. Yes, they must have a bath, and they usually take a daily tub, twice a day in summer. Perhaps your bath is too deep for them; if so, put in a small, shallow dish, three-quarters of an inch depth of water will be ample, standing on a small block of some kind, and then they will use it freely. For the aviary a shallow photo-developing dish makes an excellent bath. They do not need mealworms, though when they are feeding young a few daily often help in the successful rearing of their offspring. A good soft food is easily made by crushing a dog biscuit adding an equal bulk of dried flies and ants' eggs, and making the daily supply crumbly moist with boiling water. Osborne biscuit or sponge cake would do in place of the dog biscuit. You should keep mealworms in a tin containing a little bran, with a few pin-point holes in the lid. The seed mixture you supply for the Budgies will suffice for the Zebras, but when they are feeding young keep up a continuous supply of millet sprays and greenfood. Hope you will have luck with them.

POST MORTEMS.

Mr. H. Yates, M.R.C.V.S., 1, College Road, Harrow, Middlesex, will examine and report upon dead cage birds for a fee of 1s. 6d. each bird; for reply direct, 2s. 6d.; analysis, 21s. The Post Office regulation is that bodies of birds must be sent at the letter rate of postage, and must be packed in hermetically-sealed receptacles which must themselves be enclosed in strong wooden, leather, or metal cases. If this regulation be infringed the packets may be destroyed by the authorities. **Any bodies sent to the office of this paper will be thrown away,** and if a fee is enclosed the loss will be the sender's.

GENERAL.

ABOUT A BOOK.

E. P. M.—The book you mention is not published by us, but by the Waverley Book Co. We believe it is now out of print, so far as the publishers are concerned.

IMPERFECT PLUMAGE.

Kilty.—If you will say what birds you keep, whether British birds, Canaries, or Foreign birds, and say how you feed them, we shall be very pleased to publish your letter, or our experts would give you special advice. No helpful information could possibly be forthcoming without some particulars as to the kind of birds and the method under which they have been heretofore kept and fed.

SEXING BY A SUSPENDED COIN.

Perplexed Novice.—From August to October last practically every issue of our paper contained letters on this subject. Many believed in the efficacy of the method, and many did not, and there the matter ended. The coin mentioned was a silver coin, the needle an ordinary steel needle, and the suspending material a silk thread.

EGG CAKE FOR CANARIES.

R. Jackson.—Neither yeast nor water is used in the making of the egg-cake. It is expressly stated in the recipe "use no water," and the eggs give all the lightness necessary.

WILL MULES BREED?

S. W. B.—This is a question which is continually being asked, and can only be answered generally. Here is a copy of a reply we gave quite recently: "Generally speaking, we can only say that Hybrids are sterile. Hybrids between closely allied species, such as tame pigeons and wild pigeons, various kinds of ducks, etc., are undoubtedly capable of producing fertile eggs, and it has sometimes been claimed that hybrids between the Canary and a British Finch have proved fertile. Such cases as the latter, however, are few and far between, and when investigated scarcely ever bear the test of enquiry."

THE STOCK BOOK

Simplifies the operations in the Bird-room and makes it possible for everyone, even the veriest novice, to breed his birds as they should be bred. It affords facilities for the recording of the complete pedigree of all your birds; of your experiences during the season; an account of every bird reared. Contains also Pedigree, Breeding, Young Bird and Show Registers of simple and unique character; Cash and Profit and Loss Accounts for the year. Gives valuable hints for times of emergency during the breeding season.

WANTED

Canaries,. Norwich and Yorkshire, Parrots, and foreign birds; also litters of Fox-terrier pups, or other small breed: Mrs. Martin, 9½, Cowcaddens-st., Glasgow. (843)

15/- PER PAIR

Given for first-class Rollers, Yorkshires, Norwich, Crests; 12/6 per pair second grade, and 10/6 3rd grade; cheque sent first; complete stocks kept; cages included: Broadbent, 355, London-road, Sheffield. (844)

SALE or EXCHANGE.

Mainly Canaries.

CREST cock for yellow Norwich hens, or sell 15/-: Martin, 55, Old-rd., Huntly, Scotland. (844)

EXCHANGE good grey crested cock for dark crested hen, 1916; approval both ways: Roberts, North Creake. (842)

HOUSE-moulted Finch, bred Mules, sell 10/-; exchange good cock Canary: Bulpin and Roberts, 74, Barclay-st., Bridgwater. (838)

EXCHANGE Roller cock and Norwich hen for black and tan Manchester terrier bitch: Mr. Southworth, 13, Southley-st. Burnley. (836)

PAIR Norwich, yellow cock, buff hens (1915), 20/-; buff cock (1916), 12/6; exchange Rollers: Cripps, 65, Shere-road, Deptford, London. (844)

GUARANTEED genuine pure double yellow-bred Sib cock, 1916, 15/-; or exchange pair of good boots, tens: Laidlow, Painter, Langholm. (844)

CHAMPION pair Yorkshire Canaries, Ambers strain, 25/-; pair Norwich, Muckley strain, 25/-; yellow hen, 15/-: 81, High-st., Long Eaton. (846)

BUFF Cinnamon Norwich cock and yellow hen, 25/-; or exchange for good buff Norwich hen; yours first: D. Clacker, 18, Forth-avenue, Kirkcaldy. (841)

WILL exchange for Norwich or Yorkshires, 8 vol. bound "War Budget," and 2 unbound, up to date; cost 6/- vol.: Burton, 11, Hawthorn-st., Derby.

O.E.G.B. cock and 3 hens exchange Lancashire—Norwich cross or large Norwich cock, or sell 10/-; yours first: Alex Philp, Milton, Markinch, Fife.

PAIR unrelated Norwich greens, 13/6; or exchange good singing Roller cock; approval both ways: J. Geldard, 9, Leonard-st., Barnoldswick, nr. Colne.

YELLOW Norwich cock, two buff variegated hens, 25/-, or exchange tweeds to value: John Cartney, Pisgah, Camingstown, Turriff,. Aberdeenshire. (836)

EXCHANGE two Norwich hens for Roller cock or would sell; also pure-bred Roller hens, 3/- to 5/- each: Cooper, 164, Wolverhampton-road, Walsall. (839)

PAIR short-face Tumbler Pigeons, cock winner two prizes; cheap; £2; what offers; exchange canaries; Crests preferable: H. Bryant, 41, Newfoundland-st., Bristol. (841)

MARKED Goldfinch Mule cock, pair Siskin Mules, sell £1; or exchange good yellow Yorkshire cock, or clear Norwich hen to value: Harrison, Ellenborough-place, Maryport. (842)

HAVING chosen my breeding pairs I have 6 pairs of prize-bred Yorkshires left; will exchange for war trophies or sell 25/- to 35/- per pair: Knowles, Chemist, Earlestown, Lancs. (828)

SELL or exchange good typical Pekinese dog, 12 months, clean, good head, coat, no fault, approval willingly, for good Yorkshires or Norwich canaries; trio of Borders for sale, buff cock, 2 hens: Hurle, 19, Blanche-st., Williams Town, Penygraig, Rhondda. (841)

Mainly British.

COCK Peathroat Goldfinch, sell or exchange exhibition cock Linnet or Siskin; yours first: Cranston, 39, Salisbury-rd., Maidstone. (839)

EXCHANGE exhibition cock Blackbird for good Siskin; or offers; approval: Taylor, 266, Watling-street, Bridgtown, Cannock. (844)

GRAND Linnet Mule, good songster, exchange house-moulted Goldfinch; offers: Weatherill, Burbank-street, West Hartlepool.

GENUINE hand-reared Thrush, 7/6; 1lb. thistle seed, 5/-; exchange Goldfinches: 5, Beechcroft-terr., Maybank-rd., South Woodford. (838)

BARGAIN.—Exchange 3 exhibition Bullfinches for yellow Border cock, or cock Hawfinch; or sell: Williams, Church Island, Menai Bridge. (842)

WHAT offers in large yellow Norwich hens, 1916, for a 1916 cock Goldfinch Mule: E. Carroll, 18, Robert-street, Oldham-road, Failsworth, Manchester

THRUSH in full song, sell 6/-; exchange Hardbills or two hen Canaries; approval; seen by appointment: Edwards, 103, Glamorgan-st., Pontcanna, Cardiff. (840)

SELECTED cock Twites; exchange for good cock Goldie or Bullie hens: W. Muir, 30, Helen-st., Arbroath. (845)

EXCHANGE three large well-marked cock Greenfinches, suitable for muling, for Yorkshire or Norwich hen; or sell 2/- each: Gibbons, 7, Pennygate, Spalding. (840)

TWO good singing cock Linnets, 5/- each; make good mulers; will exchange for hen Canaries, cock Bullfinches, or Goldfinches: John Caine, 102a, Mill-st., Liverpool. (844)

GOLDFINCH and Linnet cocks, H.-M., muled two seasons; will exchange for good yellow Yorkshire cock, or sell 12/6 two: Macklow, 29, Branksome-rd., Southend, Essex. (839)

EXCHANGE two large cock Greenfinches, house-moulted, mulers, and two hen Canaries, for young yellow Norwich cock, or sell: Smith, Stags End, Hemel Hempstead. (838)

SALE or exchange; to Mule breeders; house-moulted cock Goldfinch, 8/-; house-moulted cock Linnet, 4/-; or exchange, Rollers preferred: F. Morris, 7, Croft-st., Newcastle, Staff. (845)

FOR sale, or exchange, two Goldfinches, twice house-moulted, good mulers, exchange for good pair of Norwich, on approval, or sell £1: Denman, Asylum, Ardesey, Bxls. (838)

ALL aviary moulted; 3 large grand colour cock Bullfinches, 3/6 each; 2 not so bright, 5/-; one hen 2/-; 3 very good cock Chaffinches, 4/6; all in aviary with canaries; offers: Jackson, Postman, Downham, Norfolk. (842)

A POST CARD ONLY You cannot hold your own in life's battle if weak, worn, or easily jaded. Periodical attacks of moodiness, langnor, despondency, depression, and groundless fears mean nerve troubles and lead to brain fag, impaired memory, and unfits one for study, business or pleasure. The chosen ones in every walk of life are the alert, the bright, and the intelligent, nature's natural gift, but marred for lack of a little knowledge. A post card to the Useful Knowledge Publishers, P.O. Box 94, Bradford, will put you in possession of a 48-page book, neatly bound, of valuable information, and will be sent post paid free of any charge whatsoever if you will mention CAGE BIRDS. A little knowledge saves much medicine. [Copyright.

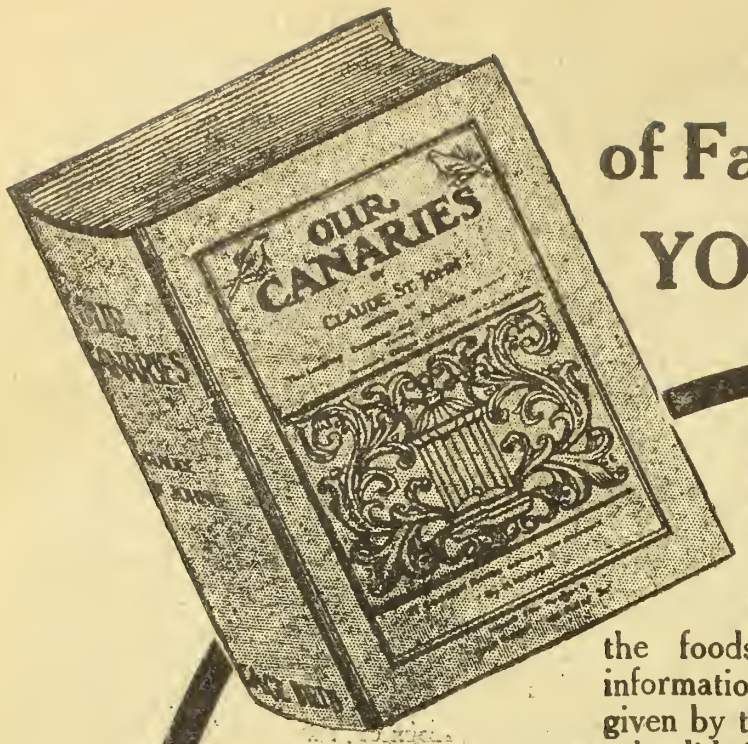
SECRETS
of Famous Canary Breeders
YOURS for only 1/- down



Judging the position of a bird by the clock.

HOW well-known Canary Fanciers bred their prize-winning birds—birds literally worth their weight in gold—how they trained them—the foods used. All this priceless information and much more is clearly given by the Breeders themselves in this splendid Canary Book. Every page—every line—is full of the *practical experience* of practical men—experts in their line. Fanciers who have specialised in Lizards give valuable information. Breeders of famous prize-winning crested varieties contribute to its 380 pages. Every feature of Canary Breeding and Exhibiting is clearly and fully dealt with—you have only to glance at the comprehensive index to turn up the information you desire.

The book contains 133 illustrations, a few of which are here reproduced. Thus, "Our Canaries" not only *tells* you but *shows* you. If you are a novice, or breed only for pleasure, you will be delighted with the increased enjoyment which the book will enable you to derive from your hobby. If you are an "old hand," or breed for profit, it will help you to *increase* profits.

"Our Canaries" will be sent you for Free Examination—Approval for a deposit of only 1/-. If, after examination, you return the book, your deposit will at once be refunded. If, however, you decide to keep the book, you can pay the balance by easy monthly instalments. Thus you have everything to gain and nothing to lose by sending for a copy. Do so TO-DAY

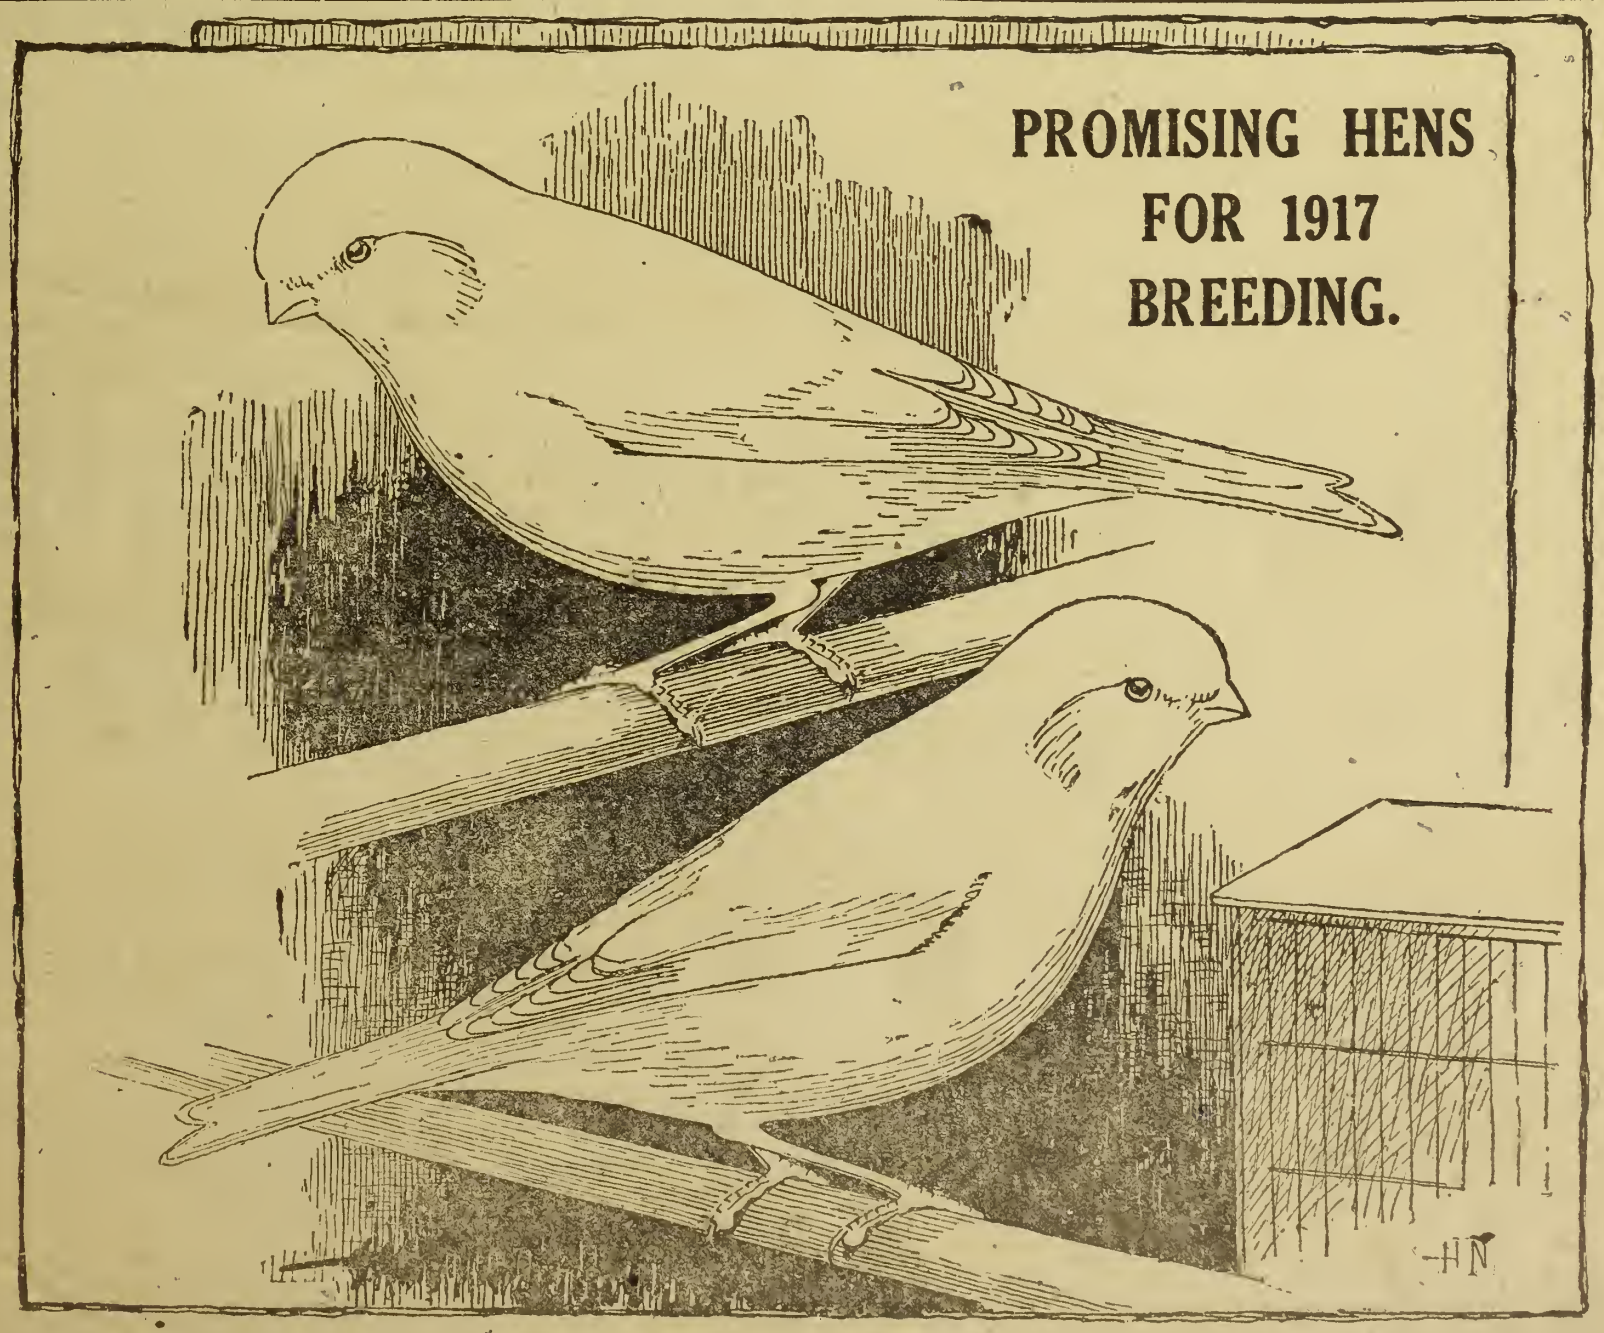
PROMISING HENS FOR 1917 BREEDING.



The two young Norwich Canary hens here shown were 1st Prize winners in the Unflighted Classes at Cardiff show. The one at the top won in the Buff Class of 17 for Mr. W. Spillman, Devonport; and the other, owned by Mr. W. Collings, Devonport, defeated 12 other competitors in the Class for Yellows.

F. CARL, Publisher, 154, Fleet Street, London, E.C.

Advertisement Charges.

One Halfpenny for each word up to 48, 1d. per word afterwards. Name and address to be reckoned. Minimum, 12 words 6d.

IMPORTANT NOTE.—Two or more Advertisements coming from the same advertiser, even if sent in different names, are reckoned together, and are charged at two words a penny up to 48 words; after that 1d. per word. No single advertisement, even if accompanied by others, will be charged at less than the minimum price, viz., Sixpence.

Headlines or Footlines, 9d. 1/-, 1/6, 2/-, 2/6, according to size.

The rate for displayed advertisements is 7/6 per inch. Rates for a series on application.

ADVERTISEMENTS UNACCOMPANIED BY CORRECT REMITTANCE WILL NOT BE INSERTED.

Postal Orders must be sent as far as possible. All moneys should be made payable to F. CARL.

The Proprietor reserves the right to refuse any advertisement, or to cancel any advertisement ordered for a series, at any time, without assigning any reason for so doing.

Advertisements must in all cases bear the bona-fide name and address of the advertiser, and no advertisement will be inserted if addressed to a receiving office, or similar place of call.

Advertisements close Tuesdays first post in each week, and should be sent to the Advertisement Manager, CAGE BIRDS, 154, Fleet Street, London. Terms for Display Advertisements on application.

ALWAYS USE "CAGE BIRDS" DEPOSIT SYSTEM.

We are not responsible for the statements made in advertisements, nor of the *bona-fides* of either buyers or sellers In all transactions the adoption of our Deposit System should be insisted upon

RULES.

1.—PROCEDURE.—The intending purchaser should send to this office the amount of the purchase (our deposit fee included), and at the same time he should communicate with the seller stating what it is he requires sent on approval. We acknowledge receipt of the deposit to both parties. In all cases the depositor should give his name and address, and also that of the vendor, and must write same clearly and distinctly.

2.—END OF TRANSACTION.—The deposit is retained by us until we hear from both parties that the transaction has been completed. If a sale has been effected, we hand the amount deposited to the seller. If a sale has not been effected, we return the amount to the depositor. The transaction must be conducted by the parties themselves. We merely hold the deposit.

3.—AMOUNT OF COMMISSION.—The fee is 6d. for each £1, or fraction of £1, and it must be sent at same time as the deposit.

4.—IMPORTANT POINTS.—The depositor must decide within forty-eight hours of the receipt of the goods whether he will keep or return the same, unless, that is, some other period of approval (of which we must be advised) is agreed upon by both parties. The depositor must at the same time notify us of the fact that he has returned the goods. If the goods are not returned within the said forty-eight hours, we reserve the right to send the deposit to the seller after the expiration of that period. And should the seller fail within three days to notify us of the receipt of his goods back again, the transaction will be treated as ended, and the deposit will be returned to the depositor.

5.—A SATISFACTORY PURCHASE.—When a transaction has been completed to the satisfaction of both depositor and seller, both parties must at once return the deposit receipts as a guarantee of its completion. The depositor must at the same time instruct us to pay over the deposit to the seller.

6.—GOODS ALREADY SOLD.—If the goods are sold before our deposit note reaches the seller, or if for any other reason he declines to do business, he must at once return the deposit note to us. Failing its receipt, we reserve the right to return the deposit to the sender after the expiration of three days.

7.—FRESH TRANSACTION.—In case no sale be effected, a deposit is available for purposes of a fresh transaction, provided another deposit fee be paid.

8.—GOODS IN TRANSIT.—Goods in transit are at the seller's risk, and any damage or loss sustained on the journey must be borne by the seller. But goods not approved of must be properly packed and returned by the same means as were used in sending the same.

9.—PAYMENT OF CARRIAGE.—The payment of carriage must be a matter for arrangement between the vendor and depositor. We do not undertake to settle disputes affecting questions of carriage. But in the absence of other arrangements the purchaser is liable for the carriage of the goods, and if the goods are sent on approval and returned, each party pays the carriage one way.

10.—DISPUTES.—In case of a dispute, the decision of the Editor is final.

IMPORTANT.

SEND THE FULL COMMISSION.—If the full commission does not accompany the deposit, the vendor will not be notified of its receipt until the amount deficient plus the extra postage incurred has been paid to us.

HOW TO REMIT.—Under no circumstances will Cheques or Post-dated Money Orders be accepted as deposits. Uncrossed Postal Orders must be sent and the numbers taken for safety.

NOTICE TO BIRD PURCHASERS.

It is advisable that all newly-purchased birds, especially foreign birds, be kept isolated from established stock for a week or ten days, until by their condition they establish the fact that they are thoroughly healthy.

MEDICINES.

"AILING Cage Birds and How to Cure Them," "Nutshell No. 6," an account of the troubles which beset captive birds, with the treatment and list of medicines to restore our pets to health. This will save you much discouragement and money, and costs only 2½d. post free.—From "Cage Birds," 154, Fleet-st., London, E.C. Or 2d. from agents (list frequently published).

Not Singing

If you have any birds you are relying upon for the breeding season that have gone into Soft Moult, we Guarantee you a perfect cure.

DITCHFIELD'S TONIC DROPS

are a certain cure for loss of voice, soft moult, slow moult, going light, feather plucking, and inflammation of the bowels.

DITCHFIELD'S FAMOUS REVIVO

is absolutely unequalled for giving new life and vigour to the birds, and for producing that smart tight appearance of the plumage so much desired by all fanciers.

These two Medicines, given on alternate days, will bring any bird into breeding condition.

DITCHFIELD'S SPECIAL LUNG TONIC

the grandest medicines ever introduced for chest and lung affections in cage birds. Can be given with absolute confidence to the most weak or delicate birds. All medicines can be given in the drinking water, and the birds take them freely, with marvellous results.

All the above remedies are sold in 8d., 1/2, and 2/2 bottles; two 8d. bottles for 1/2, two 1/2 bottles for 1/11, or three for 2/3. P.S.—The 1/2 bottles are treble the 8d. size. All orders sent per return, post free.

FRANK DITCHFIELD, BIRD SPECIALIST, OLDHAM

DURING THE WAR

our customers may rely on our continuing to supply them at LOWEST POSSIBLE PRICES. Free delivery by own van London district. Carriage paid to any country station in England and Wales 1/- cwt. extra.

KNOWLEDGE IS POWER.

You can get it in 6d. Vols.

READERS of "Cage Birds" can to-day secure at pre-war prices volumes of the well-known **"Everybody's" Series.** Each volume is, on its particular subject, the handiest and best book obtainable. Although small enough to fit one's pocket, each book is packed with a vast amount of valuable information. Consider the wonderful price—only **6d.** each (8d. post free), strongly bound in cloth; in attractive leather binding, **1s.** each (1/2d. post free). The number of these books is very limited, and owing to the enormous increase in the cost of printing and paper, it will be impossible to reprint them at present prices. There are sure to be some of these books that YOU need—some that will give you just the information you have been seeking on some knotty point. Send in your order **NOW.** It is only necessary to state the *Number* of each book as given opposite the name in the list shown here.

1. Everybody's Guide to Poultry-keeping.
2. Everybody's Guide to Carpentry and the Doing-up of the House.
3. Everybody's Home Dressmaker. (7d. only.)

AIDS TO SUCCESS.

Our Books and a Common-sense Application of the Advice therein MUST bring you Profit as well as Pleasure

All the experience of years of careful study by experts is at the disposal of readers.

YORKSHIRE CANARIES, 2/2.—By H. W. Battye (Past President of the Yorkshire Union). Absolutely the very best Handbook dealing with the Yorkshire and its sub-varieties. Contains complete instructions upon Pairing, Breeding, Moulting, and successful Exhibiting, also how to treat in both health and disease.

NORWICH CANARIES, 1/1.—By C. A. House. Tells the fancier all that he needs to know to enable him to become successful as a breeder and exhibitor of the Norwich Plainhead. The chapters on "Forming a Stud," and "How to Produce the Ideal" are worth the cost of the whole book.

THE SECRETS OF HYBRID BREEDING REVEALED AND EXPLAINED.—By many notable Mule and Hybrid Breeders. Among the contributors are such well-known breeders as Messrs. H. Colton, W. H. Vale, C. Houlton, C. J. Ward, J. Beswick, G. Lander, T. H. Kinch, T. Smith, etc. This Handbook, which contains 212 pages, 7 inches by 5, is brimful of the most practical information on the highly interesting object of Hybrid Breeding. Price 1/-, post free 1/2.

AVIARIES, BIRD-ROOMS, AND CAGES, 2/3 (cloth gilt).—By H. Normau. Contains ten lovely full-page photographic plates. A practical guide which deals thoroughly with the proper Building, Fitting, and Management of Aviaries and Bird-rooms, and the making of Cages.

SEEDS, FOODS, AND WILD PLANTS FOR CAGE BIRDS, 1/2. — By various leading authors. Full information on the seeds suitable for all cage birds, their food values, uses, etc., with descriptions and illustrations of the wild plants indispensable to the successful keeping of British and other birds.

BRITISH BIRD MANUAL, 2/3 (cloth bound).—By H Norman; or may be had in two parts. Part 1: "Hardbills," and Part 2. "Softbills." Either Part, price 1/1, post free. Each part contains a beautiful and life-like coloured plate and numerous illustrations of birds and cages. Up-to-date information on the keeping of British Birds.

HOUSE'S CANARY MANUAL, 1/2.—By C. A. House. A thorough, practical guide to the general management and breeding of Canaries, dealing fully with the breeding, etc., of every member of the Canary family, including the Roller (or Singing) Canary. An illustration of each bird, by the master Canary artist, Mr. H. Norman; exhaustive chapters on aviaries and cages, breeding procedure, moulting, exhibiting, diseases, and seeds—a compendium of knowledge.

FOREIGN BIRDS FOR BEGINNERS, 1/1½.—By W. T. Page, F.Z.S., etc., Foreign Bird Expert to "Cage Birds." A highly instructive Manual. It contains a magnificent coloured plate and a number of black and white illustrations. Indispensable to all keepers of Foreign Birds.

CANARY BREEDING FOR BEGINNERS, 7d.—By Claude St. John. A Practical, up-to-date guide to Canary breeding, designed specially for the use of the beginner. Deals very fully with the choice, sexing, and mating of the birds, feeding for condition, the cages and their fittings, the bird-room, egg-food, nest-building, rearing and moulting the young, colour-feeding, training for show, and all the difficulties likely to confront the breeder.

THE STOCK BOOK, 7d.—Of our invaluable "Breeding Room Register" a well-known fancier has said:—"It makes bird-breeding easy." No breeder of birds can possibly afford to be without it. It simplifies the operations in the bird-room and makes it possible for everyone, even the veriest novice, to breed his birds as they should be bred. Contains both Pedigree, Breeding, Young Bird, and Show Registers of simple and unique character, in addition to useful account pages.

FANCIERS' PRINTING.—Fanciers requiring business notepaper, postcards, trade envelopes, etc., should write us for a quotation. We are now in a position to supply these at specially low rates combined with first-class work. Artistic memos., with block of any desired bird, and fancier's name, address, and words of description as desired. 250 5/-. 500 7/6, carriage paid.

CAGE-BIRD HYBRIDS.—Complete bound in cloth, 7/6 carriage paid. This great work is written by Charles Houlton, an authority with a reputation extending over 25 years as a leading exhibitor and a leading expert and judge. Magnificently illustrated by that great bird artist, H. Normar. There are no less than sixteen coloured and sixteen art plates in this work. Each plate is a perfect study of an individual Hybrid.

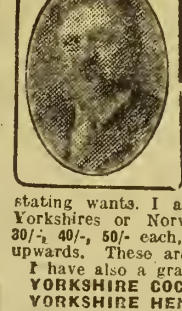
Champion YORKSHIRES & NORWICH

Bulldog Strain.



NOW IS THE TIME TO PROCURE YOUR BREEDING STOCK, to ensure getting **the best birds,** and to get them settled in their new home before pairing up. I have an enormous stock of all varieties on hand, and, having almost finished my export trade for this season, I can now concentrate my attention to the requirements of the home trade. My long experience as a breeder and exhibitor, and the large stock of birds I have to select from place me in a position to send you just such a bird or birds as you require. As regards the quality of my stock, it is surely sufficient to refer you to the reports of all the leading shows, from which you will find that both my **Yorkshires** and **Norwich** are not only maintaining but adding to, their great reputation. In addition to this, I have sold several birds that have won leading honours at all the principal shows. Kindly write, stating wants. I am now offering a limited number of grand stock and exhibition birds, either Yorkshires or Norwich, which I can guarantee as bred from my own **Bulldog Strain,** at 20/-, 25/-, 30/-, 40/-, 50/- each, cocks or hens. Also a few grand matched pairs at 40/-, 45/-, 50/-, 60/- per pair upwards. These are splendid value, and have only to be seen to be appreciated.

I have also a grand selection of stock birds from other well-known strains, as follows:—

YORKSHIRE COCKS, grand lengthy birds, in full song, 15/-, 17/6, 20/-, 25/-, 30/- each, upwards.
YORKSHIRE HENS, smart, racy, typical hens, 7/6, 10/-, 12/6, 15/-, 20/- each, upwards.
MATCHED PAIRS, 25/-, 30/-, 40/-, 50/-, 60/- per pair upwards.
NORWICH PLAINHEADS. Grand, thickset, cobby birds at same prices as Yorkshires.
BORDER FANCIES, Real good birds, both for stock and exhibition. **Cocks,** 15/, 20/-, 25/-, 30/- each. **Hens,** 7/6, 8/6, 10/- each. **Matched Pairs,** 17/6, 20/-, 25/-, 30/-, 40/- per pair.
CRESTS AND CREST-BREDS.—A few real good pairs at 30/-, 40/-, 50/-, 60/- per pair. **Odd Birds,** Cocks or Hens at proportionate prices. **Matched Pairs for Mule or Hybrid Breeding,** 15/- pair.

ROLLERS. ROLLERS. ROLLERS.

I have a magnificent collection of pure British Rollers from the best and purest strains, at following prices:—

HIGHLY TRAINED COCKS, 25/-, 30/-, 40/- each.
PURE-BRED HENS, 7/6, 8/6, 10/- each.
MATCHED PAIRS, 25/-, 30/-, 35/-, 40/-, 50/- per pair.
Travelling Cages, 4d. extra in all cases.

One word more—**Please remember, I invite you** to come on any day but Sunday, and make your own selection, but if you cannot come, **Don't Forget** that I send every bird on 7 days' approval, at my sole risk. I personally select every bird that is sent away. I have over 4,000 (four thousand) birds in my rooms at the present time to select from, and I guarantee to give absolute satisfaction to every customer or return cash in full. Terms: Cash or deposit with Editor.

Send for 1917 Price List.

The Song Birds of Australia.

[We are indebted to "The Field" for the following interesting article. Many of the birds mentioned have been kept by English aviculturists, and it is astonishing that the opinion should prevail that Australian birds are without the power of song.]

SOME years ago an uninformed tourist who visited Australia announced on his return to England that all the birds there were beautiful but mute, and all the flowers lovely but scentless. This libel on the avifauna and flora of Australia is still apparently believed in by many people, and has been repeatedly quoted in print. As a matter of fact, a great many of the Australian birds are singers, while others have very melodious calls and whistles, which almost entitle them to be called songsters.

One of the commonest in South Australia is the Piping Crow, or "Magpie," as it is called from its colour (*Gymnorhina tibicen*). Gould said that to describe its call was beyond the power of his pen, and the late Dr. A. R. Wallace thought it had "a wonderfully modulated whistle . . . unequalled amongst European birds." Its call is a deep rich carol, and to hear a number of these birds piping on a fine clear spring morning is something glorious.

The most treasured songbird in Australia is the Grey Thrush (*Collyriocincla harmonica*), a native of Queensland, New South Wales, Victoria, and South Australia. It lives in the bush, but is a very sociable bird. It has a rich note, deep and full, and very flute-like, heard chiefly in the spring.

Then there is the Butcher-bird (*Craticus destructor*), which, like some of the European Shrikes, gets its popular name from its habit of killing and impaling the small birds on which it preys. It has a loud, mellow, flute-like warble. Some of the so-called "Thick-heads," of which there are eight or ten species belonging to the genus *Pachycephala*, are included amongst the Australian songbirds, one of the commonest being the White-headed, *Pachycephala gutturalis*, which has a clear sweet voice, and is oftenest heard amongst the flowering eucalyptus. Its notes often end with a good imitation of a whip crack.

Amongst the smaller song-birds is the Australian Reed Warbler (*Acrocephalus australis*), which lives amongst the reed beds in the creeks, and is not unlike the well-known Reed Warbler of England. Its loud and varied song may be heard on any fine evening along the river sides.

The Bell-bird (*Oreoica cristata*) is a well-known songster everywhere, and its ringing, bell-like note may be often heard in the secluded gullies of the back-blocks. Mr. A. J. Campbell in his *Nests and Eggs of Australian Birds* states that it is an accomplished ventriloquist, and that some of its notes, which resemble the ringing of a small bell, often deceive the settlers when looking for their horses into the belief that they hear the bells attached to the bridles.

The beautiful little Blue Wren (*Malurus cyaneus*) of South-Eastern Australia is one of the gems of the bush; but its animated song may be heard also in many a garden. Mr. D. Seth-Smith, writing in the *Field* a couple of years ago after his return from Australia, gave an eloquent description of the tiny Blue Wren, to be seen in every garden of the Eastern States where there were suitable shrubs; the cock bird clad in brilliant enamel-like blue, his crown, cheeks, and back set off by jet-black, and his long tail erect over his back. Mr. Seth Smith brought three or four of these beautiful little birds home with him, and one of them lived a long time in the Zoological Gardens.

The Honey-eaters are a numerous family in Australia, and may be classed amongst the Warblers. The White-plumed Honey-eater (*Ptilotis penicillata*) is one of the commonest species. It is known to everyone as a frequenter of gardens, and has a melodious whistle. The Yellow-plumed Honey-eater (*Ptilotis auricomus*) is another common species, which has a loud, ringing call.

The "Robins" of Australia, so called from their red or orange-coloured breasts, are more nearly related to the Flycatchers, as may be judged from their habits, the construction of their nests, and the colour of their eggs, which resemble those of the English Spotted Flycatcher. Their song, though soft and pleasant, is not very pronounced, but one of them, the Yellow Robin, has a cheerful piping note, with which it greets the dawn.

From these brief remarks it will be seen that the oft-repeated statement that Australian birds have no song is altogether without foundation.

Provided an addressed envelope, sufficiently stamped, accompanies same, every effort will be made to return unaccepted contributions promptly, but he does not in any case hold himself responsible for their safety.

All matter intended for publication must be written or typed on one side of paper only, and must reach us not later than the first post on Tuesday if insertion in the next issue is desired.

"CAGE BIRDS" will be sent post free weekly, on the day of publication, at the prepaid rate of 10s. per annum for the United Kingdom, and 13s. annuany for foreign countries.

Twitterings.

The date of the Annual Show of the Blaenavon C.B.S. has been fixed for Nov. 1st next.

Mr. J. A. Withers, sec., Bristol C.B.S., writes that he has removed from 20, Little Paradise to 4, Church Road, East Street, Bedminster, Bristol.

Will societies please note, to avoid clashing, writes Mr. J. W. Watson, South Shields Always Ready C.B.S., that we have fixed our show dates for July 21 and Nov. 17?

We shall hold our members' pair show on Wednesday, March 4th, at the Council Chambers, Eastleigh, writes Mr. J. Alderslade, hon. sec. Eastleigh C.B.S. Mr. Fellows, judge. Visitors will be admitted free from 6 till 8. We have decided to hold our annual show on Nov. 14 and 15. Will Secretaries please note to avoid clashing.

We have received the balance-sheet of the Croydon F.A., from which it appears that there was a small profit on the Young Stock Show, and a nice balance of £9 8s. 11d., upon the Annual Show. The balance brought forward from 1915 was £5 18s. 6½d., and the present cash in hand and at bank is £21 19s. 9d., a very satisfactory result of the year's working.

The London and Counties A.C.B. are holding a social evening and a light supper on March 26th at the Victoria Hotel, the corner of Farringdon Road and Charterhouse Street, E.C. Chairman will be Mr. J. Robson, and a grand company of artists will appear. Admission, 1s. 6d., including tax; doors open, 6.30, start 7 sharp. Fanciers who would like to spend an enjoyable evening kindly communicate not later than March 20th with the Secretary, W. Gilbert, 42, Cowcross Street, E.C.—(Advt.)

The frontispiece of the February issue of the "Avicultural Magazine," the journal of the Avicultural Society, is a beautiful photograph by Miss E. F. Chawner, of her tame Spectacled Owl. The principal article in the issue is "The Influence of German Aviculture" by Mr. W. E. Teschemaker, whose occasional contributions to our own columns are so much enjoyed by our readers. This article, which is "to be continued" is written in the author's best style, and is of very great interest. Among the many tit-bits is the information that two hundred and thirty years ago the Germans were supplying trained Rollers to half Europe. "They had recognised the possibilities of the Canary as a singing bird; they had acclimatised it, taught it portions of the songs of the Nightingale and Titlark, and had succeeded in breeding it on so large a scale that they could supply trained song-birds to half Europe. Other articles are "Are Birds Easily Deceived?" by Dr. A. G. Burles, "Sheathbills," and "The Ocellated Turkey," by Dr. Graham Renshaw, and "The Arrival of Kate," Kate being a hen Indian Shamah, by Mr. G. E. Low.

The catalogue of Mr. J. Pitchford, cage maker, 218, London Road, Stoke-on-Trent, is to hand. Everything that may be required in the bird-room seems to be listed, and the prices are most reasonable. A copy will be sent free on application.

The incorporation of the "Zoologist" with "British Birds," Messrs. Witherby and Co., High Holborn, 1s. monthly, is much to the advantage of the latter journal, and the issue of March contains the annual notes by Mr. J. H. Gurney, on the bird life of Norfolk, which hitherto have been published in the "Zoologist." These are now arranged under heading "Migration," "Food," etc., which add much to their value. Under the heading migration we learn that numerous flocks of Redwings appeared in the county in October, some of them numbering as many as a hundred birds. Under "Foods" the Rook is given a very bad name, and the Starling not a much better one. The Bearded Tit is said to be holding its own in Norfolk, and the total number of nests is given as about eighty. Two Hoopoes were reported in the county during 1916; a Robin's nest with nine eggs was found, and there are numerous other interesting notes.

A Fine Record.

I beg to thank you, writes Mr. W. Fairhurst, for the honour you have conferred upon me by portraying my 'Twite in your valuable journal, Cage Birds. He has taken eleven successive firsts under such well-known authorities and judges as Messrs. Houlton, Davis, Watson, Arrighi, Johnson, and your artist and judge, Mr. Norman. He travelled over 800 miles in six days to compete at Glasgow and Llanelly, and took first at each place. Great credit is due to Mr. Norman, his sketch shows the beautiful work and markings of the bird to perfection.

OBITUARY.

It is with deep regret, writes Mr. J. Green, Sec., Manchester and N.C.O.S., that I have to announce the great loss our late treasurer, Mr. J. T. Brown, has sustained in the death of his wife. Mr. Brown has a great task before him, being left with a family of young children, and it is to be hoped that he will have the best of health and strength to pull him through, though he has not fully recovered from the serious illness he had some 18 months back. I am sure Mr. Brown will have the deepest sympathy of all the members, and his old friends from far and near.

It is with deep regret, writes Mr. Geo. Lane, hon. sec., S. Moor Social Club F.F. and C.B.S., that we have to announce the death of Mrs. John Armitage, wife of one of our members. She died suddenly, after having gone through an operation in Newcastle Infirmary, and we extend Mr. Armitage our deepest sympathy in his sad bereavement.

A Roller Club for Radcliffe.

A club, amalgamated with the National Federation, having been formed at Radcliffe, meetings will be held every third Wednesday each month, at the Boar's Head Hotel, at 8, writes Mr. J. Pearson, Sec., 26, Church St., Radcliffe. We shall at all times welcome new members. Entrance fee 1s., subs. 2s. 6d.

Judges at Wakefield O.S. Shows.

We are sorry that a mistaken statement was made in our issue of last week that Mr. Wilcock would judge the Boxing Day Show of the Wakefield O.S. The judges appointed for the shows of the society for the forthcoming season are — Oct. 27, Mr. H. W. Battye; Nov. 24. Inter-Club Show with Ardsley C.B.S., Mr. F. Self; and Boxing Day Show, Mr. T. Bennett.

In the Courts.

Cruelty to Brace Birds.

At Bristol Police Court, John Knowlson, 46, was summoned for unlawfully using a net and two call birds, namely, Linnets, for the purpose of taking wild birds, on Feb. 15. There was a further summons against defendant for cruelty to the Linnets, contrary to the Wild Birds Protection Acts.

A Special Police Sergt. stated that he was at Crew's Hole, and saw nets being used for the purpose of snaring birds. Defendant had two captive birds, and they were tied to the nets with string. The stick to which the birds were tied was so arranged that the two birds were kept moving. The string was tied round the birds under the wings.

Inspector Burton, of the R.S.P.C.A., gave evidence of examining the birds. They were very much bruised and cut, and were in a very exhausted condition. In witness's opinion the birds had been very cruelly treated. Defendant was fined 20s. for the cruelty.

A Lecture on the Yorks. Canary.

At the meeting of the Sunderland C.B.A. this evening, Saturday, Mar. 10, at the Station Street Cafe, Mr. Farrar will lecture on the Yorkshire Canary. Fanciers will be welcome.

New Secs. for Penygraig.

Mr. G. Padfield writes that Mr. W. Hollinshead, 19, Tyncear, Penygraig, has been elected secretary of the Penygraig C.B.S., and Mr. Edward assistant secretary in place of Mr. T. L. Evans and himself respectively.

TEN SHILLINGS FOR A LETTER

NOW that pressure on our space is relieved by the closing of the show season we hope to be able to afford more room for the correspondence section of our paper, for we know that very many of our readers look upon the correspondence pages as being of great interest.

With this view we have pleasure in renewing the offer which met last year with such a fine response, and we shall award a prize of ten shillings for what, in the opinion of the Editor, is the most interesting letter in each issue of Cage Birds, beginning with next week, March 17.

The weekly prize we are offering will be open to all our readers alike. The letters may be on any subject, so long as they are on birdy matters. They may be sent at any time, and every week a prize of ten shillings will be paid for one of the letters published.

We are sure that every reader of any issue of Cage Birds, or of any page of Cage Birds, must, as he reads, find something on which he would like to express an opinion, or something which suggests something else which he knows would be of value to others if expressed in print. Let him then sit down at once and send us a note. It may not be published the same week perhaps; but when it is published the writer may get ten shillings for his trouble. Even if he does not win the prize, he will have the satisfaction of knowing that he has helped to make the only paper devoted to the hobby of bird-keeping interesting to his fellow bird-keepers, who in their turn are helping to interest him.

An advantage of the proposition is that no reader need be in want of a subject. He may take the current number or any back number, or even this proposition itself if he so chooses, and write in support of or against anything he may find, or the letters may be quite independent of anything that has gone before. The field is practically illimitable; the idea is before our readers, and it is for them to help us in our endeavour to make Cage Birds interesting to one and all alike.

It is by the interchange of views that the hobby of bird-keeping is kept to the front, and the reader who in any particular week is giving of his knowledge and experience for the benefit of others may himself learn something from the letters published which may repay him for his trouble, even though he may not win the cash prize.

Further, the fact that he may not win the prize with any particular letter should not deter him from writing another. The prize will be given weekly so long as the idea is supported, and someone must take it.

One thing we would mention, however, and that is that the letters must be original; if by accident a prize is awarded to a letter which is not original, the award will not hold good.

There may be some readers of Cage Birds to whom the idea of winning a monetary prize does not appeal. Readers who are so fortunately placed as not to need the money may allot their prize to any charity they may select, or they may endorse their letters "not for competition."

We would say just one word to lady readers, however. Will they please take "he" when written in this offer to mean "he or she." Some of the very best letters and articles published in Cage Birds have been from the pens of our lady readers, and we should not like them to think we are leaving them out of the present offer.

Musical Evenings and Prize Distributions at Bradford.

The joint prize distribution of the various specialist clubs and the Yorkshire Union, writes Mr. S. Midgley, will take place today (Saturday), Mar. 10, at the Market Tavern, Bradford, commencing at 6.30. All fanciers and friends are invited, especially ladies. Some good talent has been engaged.

I have changed my address from 1, Grosvenor Road, to 5, Laburnum Place, Manningham, Bradford, writes Mr. F. P. Terry, sec. Bradford West C.B.A., and the Bradford West C.B.A. have changed headquarters from the "Shoulder of Mutton" to the Girlington Hotel. Our annual social and prize distribution has been postponed from Mar. 10 to Mar. 24, owing to the Yorkshire Union prize distribution coming on the former date.

Readers are advised to use our Deposit System when dealing with Advertisers. See rules at head of small advertisements.

The Fate of the Flamingo.

A Flamingo has been shot at Marschapel, Lincs. The bird measured 5ft. 6ins. from beak to tail.

Increase of the Pied Flycatcher.

Mr. Owen R. Owen, Oswestry, says that the Pied Flycatcher is yearly becoming more common in the district.

Early Nesting of the Dipper.

A pair of Dippers were noted building their nest on Feb. 13 on the ice-covered banks of a stream in East Lothian.

"Quite."

"The Schoolmistress" for March, under "Nature and Science Notes," says "It has been ascertained that quite fifty different sorts of birds arrive in this country and scatter themselves over the land."

A Mistake in Price.

The price of Norwich in my advert. in Cage Birds for March 3, writes Mr. W. R. Stevens, Abertillery, should have been 12s. 6d., not 1s. 6d. I have had in two posts 15 letters and seven P.O.s, and the mistake will cost me a few shillings for stamps to return P.O.s before it is cleared up. The birds are sold at 12s. 6d., and I have returned all P.O.s to date. I thank those who have enquired for particulars but did not send stamp for return, and I have written to all those who did.

Where the Bird Laws Fail.

The statement is frequently made, writes Mr. W. E. Collinge, in "Nature," that, notwithstanding a little harm that certain birds occasionally do at particular seasons of the year, as a class they are beneficial. If this be so, it seems to me most important that we should know which species are the culprits, the extent of the damage or loss they occasion, and the frequency with which they occur throughout the country, in order that so beneficial a class of animals should be rid of their "black sheep," and their fair repute remain impeccable.

Unfortunately such a statement is only partly true, and in the present state of our knowledge it cannot be denied or upheld upon practical evidence. This, at least, we do know, that many species of wild birds are protected that are distinctly injurious, in consequence of which hundreds of thousands of pounds' worth of food is annually destroyed by them; that there are many species of wild birds which are annually destroyed in large numbers, and that the food of these species has been proved to consist almost entirely of farm vermin, which latter exact an enormous toll upon the produce of the land; finally, that there are a number of species with reference to which we know comparatively very little as regards the nature of their food and feeding habits, and before they can be said to be beneficial, injurious, or neutral, much more detailed information is required.

WAR TIME FOOD.

Why Not Eat Sparrows?

WE find, says "Town Topics," that these Puritans who prate about poultry, pigs, potatoes, pheasants, foxes, and food for the people have peculiar views with regard to Sparrows, which, abounding, are working havoc with the said food of the said people. They advocate the wholesale poisoning of the spadgers. They bellow from Bethel, and in their boomerang broadsheets that the birds in question must be spared at this time of year, when they are feeding on bugs, beetles, wireworms, aphis, and other pests, but should be ruthlessly slaughtered in time of harvest, when their provand is corn. But, you see, if you kill them in August you can't have them in February. You can't have your pudding and eat it. Which brings us to the point, which is pudding, or pie.

Instead of poisoning these passerines, thereby, endangering the lives of precious beasts and birds, and wasting good food, the Sparrows should be shot or trapped, and subsequently cooked.

Sparrow-pie is a dish for the gourmet. Good for the home-stayer, it would be a godsend to the dear, good chaps in the trenches, who, reading this, will smack their lips. And you won't spoil your Sparrow pie, or pudding, by the admixture of Blackbirds, Thrushes, Fieldfares, Larks, or even Ortolans, Quails, or Beccaficoes—if you can get them, and if the Minister of Manger permit.

"I sold about £15 worth of birds from the three advertisements in CAGE BIRDS."—G. W GRIMSDITCH (Dukinfield).

HEALTH & STRENGTH

Deals with all kinds of athletics, including Football Wrestling, Boxing, Weight Lifting, Fencing Running, Ju-Jitsu, Gymnastics of all kinds, Swimming, &c., &c. Gives free advice on all questions of Health, Diet, &c. to all readers EVERY THURSDAY, 1d. Sold Everywhere. Get a copy to-day, or send for Free Specimen to "Health and Strength," Windsor House, Kingsway, London.

MY OUT-DOOR BIRD ROOM.

By W. WOOLDRIDGE, HARLESDEN.

Telling how a Fancier built an ideal Bird Room as a spare-time occupation.

I AM enclosing a photograph with a few particulars of my out-door aviary and bird room combined, thinking some readers of our only birdy paper, CAGE BIRDS, may be interested in the experiences of a novice Canary fancier.

For many years I have been very much interested in the keeping and breeding of Norwich and Yorkshire Canaries, and I have bred many good birds, but owing to business circumstances I was never able to remain long at one address, and I have been compelled to part many times with my stud of birds after being able to get them together ready for show purposes. Hence my position still as a novice in the show world.

The Fascination of Canary Breeding.

Through the same circumstances I have met with many disappointments in the building of outdoor bird rooms and aviaries, and it has many times made me feel that I would never again trouble any more about Canaries and Canary breeding as a pleasant hobby, but so often as I visited some brother fancier's bird room I felt the same old longings come over me again, and it is impossible for me to resist these longings, so once again I have recently become the proud possessor of some of the gems of the Canary fancy.

My first three pairs of Yorkshires I secured through the exchange columns of CAGE BIRDS in the early part of last year, and in the middle of April I paired them up. My final result of strong, healthy young from the season's breeding was 28 young, which I think is a very good result from three pairs in such a bad season as most fanciers experienced last year.

My first bird room was a bath-room, but this became so inconvenient and unsuitable for my birds that I removed them to a large greenhouse attached to the house, and leading into one of the rooms. This greenhouse I found was also very much to my disadvantage in the proper rearing and breeding of my birds, so again I began to think what was the best thing to do. I hardly knew what was best, for I think that if one wants success in the breeding season the birds must be kept in fine, healthy condition, and studied in every way, not only in just giving them seed and water, and cleaning them out regularly, but in seeing that they have pure fresh air, perfectly clean sand trays, sound grit, wholesome seeds, clean water vessels, and fresh water every day, together with attention to keeping down red mite, disinfecting the bird room, and keeping it well scrubbed out with soap and hot soda water not less than once a week. These are the fundamental principles which lead to a fine and healthy stock, and if attended to will eliminate most ailments in a bird lover's bird room.

Why the Bird House was Built.

I am afraid I am running away from the subject in hand, viz., the building of my outdoor bird room, and I am putting the cart before the horse, so to speak, so I will return to the subject. Finding, as stated, that my greenhouse was unsuitable for success I talked the matter over with my wife who by the way is a lover of birds, and a great asset to me in the breeding season in attending to my pets when I am away all day at business.

Finally, after talking seriously over all points relating to making a bird room of another room in the house, we decided that the ones we could spare were quite unsuitable either owing to insufficient light, wrong aspect, or the window opening on to a dead wall of the next house. So as luck came my way in the shape of a week's holiday in the early part of September, instead of leaving home for other pleasure I decided that I would build a garden aviary and bird room combined.

I secured a copy of Mr. H. Norman's book on Avairies and How to Construct Them, and after a good digestion of same I set to work. After I had made all my calculations for the required quantity of timber, in four days I had my bird room erected, and covered in on top. Next I set to on the interior, which I distempered all through with a light blue distemper, made of size, whitening, blue, and some Jeyes' fluid, and put on hot.

The bird room is built of 4-in. ¾ matching, and 2-in. square framing, built in sections, and bolted together. The whole can be removed to any position at any time, and is a tenant's fixture.

The top is covered with patent asphalt, and painted ivy green, including the whole wood work outside, except the sashes, and these are painted white to give a nice appearance on the front view.

Inside the bird room I have made a partition three feet from the flight end, with a wire door, so as to form sleeping quarters for the birds in the outdoor flight. The bird room is ten feet long, eight feet to the ridge, and six feet wide, so that beyond the partition there is a space of seven feet by six for cages.

These are 24 in number, large single breeder type, and set on staging nine inches from the floor. The floor is built of 1-in. floor boards, and covered with light coloured lino., which makes a nice finish, and is easy to keep clean. I am now arranging to have it heated on Mr. Gordon Stewart's idea CAGE BIRDS of September 23 last, for this I think is very simple, and a good arrangement when properly fitted.

The flight, 7ft. 6in. long, 6ft. wide, 8ft. to ridge, I originally built of all open wire, underneath trees at the end of my garden. Inside the flight are tall privet shrubs, planted around the sides, and the ground space is covered with turf. Natural and other perches are provided, and also a glazed sink let into the ground for the birds to bath in, with a pit underneath the outlet, so that it can be easily cleaned out, and all waste water run into the pit instead of having to be scooped out.

At this stage I thought very much about the aspect of my bird room and flight which is: Front West, flight end North, and being under large fruit trees I thought it would be very much protected also by the end wall of the garden.

Where to Seek Advice.

Still, after considering all these points, I had my doubts about its position, and I was also under a kind of fear of putting it in any other position of my garden, which I should have liked to do. My fear was that of obstructing the view of neighbours, so I wrote a query to CAGE BIRDS asking the best thing to do under the circumstances, saying, also that I wanted to protect the shrubs in the aviary, and keep them from withering.

The answer by Mr. H. Norman to my query was that I could not expect to get green shrubs and birds in a small flight, also that, being under the trees, I should sacrifice a good deal of sunlight. He also recommended me to cover in the top with a span roof or tarpaulin to keep the birds dry, and free from the dripping from the trees overhanging the flight.

This advice I took as quite sound, and I have covered over the flight with 8-in. boards and patent roofing felt, as will be noticed in the photograph. I have also pruned off all the heavy branches of the trees to prevent the continual dripping from them.

The bird room is ventilated on Mr. Norman's principle of one 10in. by 8in. ventilator, covered with perforated zinc right up to the roof ridge in one end of the building, and another of the same size in front, right up to the eaves in front. (See also photograph.) These are always open, night and day, and my bird room is always fresh and sweet with pure fresh air always going through it.

The sides of the flight are of ½-inch mesh wire-netting, and I have another outer fange of wire-netting 3ft. high, 14 inches from the flights as a protection from stray cats. This is the finest protection any fancier can have against such prowlers.

In closing I should like to say that if only lovers of cage birds would like to give me a visit at any convenient time by appointment I shall be very pleased to show them my bird room and flight, and my birds, which are at present in the pink of condition, and to talk birdy matters with them.

I am always pleased to learn from brother fanciers, as knowledge is power, and can be obtained easily and pleasantly by friendly visits to other fanciers' bird rooms, and by joining societies and discussing birdy matters more often than at present done.

I have through the medium of CAGE BIRDS' advertisement columns secured a nice lot of good class birds, Norwich and Yorkshires, and I am perfectly satisfied with them. I feel certain that the cage bird fancy would be entirely lost without such a paper as our CAGE BIRDS. I can claim to be a very old, regular reader, and I look forward every Friday morning to my copy, and would not care to be without it.

The building of my outdoor bird room and aviary was a success both in the final results, and as a change from the every day routine of business life. It was built and fitted by myself single handed and finished in about eight days with the exception of a few minor things to do at other spare moments.

As the work of an amateur at building it may have many faults, but to me the results of my work give great pleasure and satisfaction, for I know that the comfort, health, and privacy of my pets are now more assured in this their new home than in any room that I may have arranged for them in the house.

Mr. Wooldridge's Out-door Bird Room.

Seasonable Hints on Useful Weeds.

By RICHARD MORSE, F.R.H.S.

A new weekly feature which will be found of the highest value to all who keep seed-eating birds, and of interest also to all who appreciate the beauty and usefulness of the flowers of our way-sides and meadows.

A great deal of attention has recently been given in the Press to matters concerning the collection and cultivation of British wild plants with medicinal properties, and undoubtedly one effect of this campaign has been to direct our thoughts to the many treasures our fields and woodlands hold in store for us, if only we have the knowledge and patience to seek them out.

I hasten to say that I am too great a lover of the beauties of our countryside to approve of the reckless collection or destruction of some of the rarest of our most charming wild flowers, and feel that the very small benefits which might accrue from such spoliation would be outweighed a hundred fold by the loss to our native flora; but there are, of course, many plants against which this objection cannot be raised, for some of the plants much sought after are so abundant, and withal so thrifty, that their extermination would be well nigh impossible, even if we set out with the avowed intention of achieving that end.

Those of us, however, who desire to collect foods and medicines for our feathered friends only, are hardly likely to be accused of bespoiling the hedgerow, or of exterminating rare species of flowers, for those plants with which we are concerned are for the most part of wide distribution and extraordinary hardihood, and we are on that account justified in collecting their various parts throughout the season as opportunity permits.

Only those who are in close touch with outdoor botany can have any idea of the vast wastage of bird-food material during the course of the year in our country districts, and with the daily increasing need for economy in every direction, it behoves us all to do what is in our power to utilise these food-stuffs, and so save expenditure on imported articles from the shops.

With this object in view, I propose each week in these short notes to deal with the various wild plants and shrubs as they appear, and to show how even the veriest novice can with a little patience identify and gather, or even cultivate, the most valuable of our food-plants for use in the aviary.

Apart altogether from the economy to be effected in this way, the study and collection of seeds and weeds becomes in course of time a fascinating hobby, and one gets, moreover, into very close touch with our native songsters in their natural haunts, and so picks up countless items of interest and value in connection with their habits of life and food which can be put to practical use at home.

It will be my special endeavour to avoid almost entirely the use of scientific terms, so as to make the descriptions easily intelligible to those unacquainted with botanical matters. Drawings, too, of various plants and their parts will also be included from time to time, and readers who experience any difficulty will be invited to send along doubtful specimens for identification.

(To be continued.)

FAVOURITE FOREIGN BIRDS.

By "TYRONE."

Some practical hints upon the treatment of the more inexpensive of the many beautiful foreign birds which may easily be kept as pets

The Avadavat.

(*Estrelda Amandava.*)

AVADAVATS are imported in normal times in such large numbers that they can frequently be bought for the low price of 2s. a pair, and, being very hardy and prettily coloured, they are good birds for a beginner to start with. The cock when in full colour is bright red, with brown wings and tail, red beak, and small white spots on wings and side. In some birds the crimson is toned down to copper red, but there seems room for doubt whether this is due to their having faded while in the dealer's shop, or whether they come from a different neighbourhood originally. The crimson coloured birds are frequently called "Tiger Finches," and sold for a higher price than those of a coppery tint.

The hen is brown, with fewer white spots than her mate possesses, but he strongly resembles her when out of colour. All the hens I have owned have sung nearly as well as the cocks, but I do not know if they are all able to do so.

A peculiarity with Avadavats is that they seem to change colour more frequently than most birds. I do not suppose they moult more than is usual, but there are frequent minor changes which are very puzzling, and where several cocks are kept together it is difficult to follow these changes exactly.

When caged indoors, these little birds have an annoying habit of plucking one another's feathers, so that many of them will be quite bald on the head and neck. When once this is begun, no more feathers are allowed to reach their full growth unless the victim is caged by itself during their reproduction, and kept in a fairly warm temperature.

Avadavats are very hardy, and, although such tiny birds, they will even live through our English winter in an unheated garden aviary, provided they are well fed, and have plenty of shelter from rain and wind. They should have boxes filled with hay to sleep in, though they will not always use them at first.

When kept under suitable conditions Avadavats have been known to live seven or eight years in captivity, and in their old age they sometimes develop patches of white in their plumage. These little birds rarely breed in this country, because their nesting season begins in our autumn. To rear them a temperature of 60 deg. at least would be required.

The Avadavat is easily fed. He requires white and spray millet, a little canary, and pure water. Ants' eggs should also be given occasionally, and any live insects, especially green fly from rose trees. If exposed to cold a good insectivorous food, or flaked egg and biscuit, will help them to withstand it.

The green Avadavat is olive green above, and lighter green beneath, covered with dark, wavy lines. The beak is dark red. It is not quite so hardy as the common Avadavat, and requires care and warmth until it is acclimatised. Then it will live for years, and even pass safely through the winter in a sheltered garden aviary without heat, if fed as suggested for the common Avadavat. These birds have bred in England, but they are not likely to do so in a small aviary.

The Golden-breasted Waxbill.

(*Estrelda Subflava.*)

The Golden-breasted Waxbill is a general favourite. Its back and wings are dark greenish brown, the throat and breast are yellow, tinged with bright orange red, and a red line runs from the beak above the eye. There is another little patch of red at the root of the tail. The hen is duller in colouring, and has not the golden breast.

These little Waxbills are very tiny, and it is surprising through how small a hole they will escape. The cage or aviary should, therefore, be close-wired, and if they are kept in a cage made for Canaries the holes before the seed and water glasses should be blocked up, or the little things will slip through and probably be found dead.

Dr. Russ was very successful in breeding the Golden-breasted Waxbill, and eggs have been laid in English aviaries, but the young Waxbills are not easy to rear, and would require warmth and plenty of fresh ants' eggs.

Dealers frequently call this bird the Zebra Waxbill, from marks on the sides, which are supposed to resemble the stripes of a zebra. The food should be the same as for the Avadavat.

The Orange-cheeked Waxbill.

(*Estrelda Melpoda.*)

This is another tiny little bird from West Africa, and it is quite as great a favourite as the last. The principal colour is greyish brown, with a very conspicuous patch of orange colour on the cheeks. It is a tiny little bird, but active and intelligent, and well suited to live with others of its kind in a large cage indoors.

Like the Golden-breasts, they should not be exposed to the cold and damp of our English winters. Food: Millet, spray millet, and canary, with egg-food and insects now and then. All these little birds enjoy flowering grass and chickweed.

This species has been bred in England, but none of the Waxbills are easy to rear in captivity.

The Cordon Bleu.

(*Estrelda Phœnicotis.*)

The Cordon Bleu is one of the most delicate members of the Waxbill family, and, though hundreds of these lovely little birds are imported annually, a large percentage die within a very few weeks. Even when they are acclimatised they are not hardy enough to winter out of doors, but require heat during the cold weather. Their beautiful plumage and gentle ways make them most attractive inmates of the drawing room cage.

The Cordon Bleu is greyish brown above, with face, throat, breast and sides bright blue. The blue is richer in colour in the cock, and he also has a crimson patch on the ears to distinguish him from the hen; from this he gets his other name of crimson-eared Waxbill.

Anyone who wishes to procure Cordon Bleus will be wise only to purchase those imported during the summer months, as these little birds are very liable to pneumonia when they first arrive. They should be caged in a warm place (a temperature of 60 deg. or 70 deg. would suit them well), and generously fed.

In addition to millet, spray millet, and canary, they need fresh ants' eggs, and plenty of live insects, including green fly. Be careful that these are not collected from laburnum or other poisonous shrubs. They will also eat small mealworms and tiny gentles well cleaned in bran.

Cordon Bleus have been bred in Germany, but in England the young ones seem difficult to rear. A good many are hatched each summer, but most of them die within a week, probably from insufficient insect food. The Cordon Bleu builds a domed nest in a bush, and does not seem to care much for an artificial nest box.

The Common Waxbill.

(*Estrelda Cineria.*)

This is the most easily obtained of all the Waxbills, and, though more soberly tinted than some of them, is, nevertheless, a very pretty little bird. In colour it is brownish grey, with tiny wavy lines all over it. On the breast is a reddish tinge, and a crimson streak passes across the eye from the base of the beak.

The common or grey Waxbills are such tiny birds, and so very active, that ⅜-inch mesh wire should be used for the aviary that is to contain them. They are very hardy for their size, and have wintered out of doors in a sheltered aviary where they had always access to a pan of soft food.

Waxbills have such tiny bodies that they cannot fast for very many hours at a time; therefore, deaths will be averted, and the little things will thrive better, if they are provided with a light to shine on their food tins during the long winter nights, or in foggy weather.

Food: The same as recommended for the Orange-cheeked Waxbill.

"Food."

THE GREAT NEW NATIONAL WEEKLY.

A practical journal which shows how to grow our own food.

The profitable rearing of Poultry and animals which help to fill our food bill is dealt with each week, and invaluable advice is given to those who have started to produce home-grown fruit and vegetables.

No one with a garden, large or small, should be without this wonderful penny-worth, and the small holder will find in it a veritable treasury of practical knowledge.

Every Thursday 1d.

Mr. Anderson's Thrush-Blackbird Hybrid.

A Notable Hybrid.

AT a scientific meeting of the Zoological Society, held on February 6th, Mr. Gerrard exhibited, on behalf of Mr. G. Crabb, a mounted specimen of a Hybrid between a Song Thrush and a Blackbird. The bird is one of those bred last summer by Mr. Anderson, of Darvel, from parents which he said had also reared a nest of three in the previous season.

This year the young birds showed their Blackbird parentage more distinctly than those of last year, and there could be no doubt of their being as claimed, namely, Hybrids between a Song Thrush and a Blackbird. This one arrived home dead after a show, and Mr. Anderson kindly sent us the body with a view to its being preserved and added to the collection of prize winners belonging to the London and Provincial O.S.

The collection of stuffed specimens to which this bird forms so interesting an addition will shortly be deposited at the People's Palace, Mile End Road, where it will be on view. The Palace is within a short walk from Stepney Green Station, and the motor omnibuses from the Mansion House pass the doors.

The photo reproduced is by Mr. D. Seth-Smith, of the Zoological Society, who sent a copy also to "The Field" with a letter of which the following is an extract. The note of the Editor of "The Field" is also appended:—

"The bird exhibited, and of which a photograph is herewith reproduced, proved by dissection to be a male. Both in plumage and measurements it corresponds more closely with the Song Thrush than the Blackbird, and it might, in fact, be mistaken for a dark variety of the former species. Its general colour, however, is of a much darker hue than that of the Thrush. The ear-coverts are very dark brown, and the buffish-white eye stripe characteristic of that bird is absent. The chin, which in the Thrush is generally devoid of spots, is in this bird spotted. The throat, breast, and flanks are spotted like those of a Thrush, but on a darker ground. The upper mandible is black, the lower blackish at the tip and yellow at the base, and the legs and feet are intermediate in colour between those of the two parent species.

I am not sure whether there are any properly authenticated records of wild Hybrids of these two species, but it is evident from the appearance of this captive bird that such Hybrids might be easily overlooked; that is, if the male bird were the Song Thrush. It would be interesting to see the reverse cross, i.e., from a male Blackbird and female Song Thrush, which might be much more like the Blackbird.

D. Seth-Smith.

[The interbreeding of Thrush and Blackbird has been frequently reported, although not always on such good evidence as in the present case. The earliest of such records as we have noted may be found in Loudon's "Magazine of Natural History for 1834." Macgillivray has alluded to it in his article on the Thrush, and Newton in the first volume of Yarrell's "British Birds" (page 282), states that the Blackbird will breed with the Song Thrush, and in one case on record (i.e., Loudon's) Hybrids were produced from such a union in two successive years. In Harting's "Handbook of British Birds" (second edition, p. 39), after quoting Loudon and Macgillivray, several references are given to such Hybrids reported in the "Zoologist" (1883, p. 123; 1884, p. 146; 1892, p. 270; 1895, p. 233), and "Transactions of the Norfolk Naturalist Society" (vol. iii, p. 588.]

Correspondence.

Ringed Aliens.

Starlings as Well as Sea Gulls.

SIR,—I noticed in CAGE BIRDS of Feb. 17 that my old friend, D. J. Thomas, of Cardigan, records the capture of a Sea-gull in that town bearing a ring marked "Vogel Warte Rossiten Germania 28538 E." It may be interesting to your readers to know that about the same time a dead Starling was picked up near Clonmel, Ireland, with a ring marked "Vogelwarte, Rossiten, F 34603." These birds must have come from Germany among the hosts of winter migrants.

Rossiten is a small fishing village on the Baltic, where a few years ago the German Ornithological Society established a permanent vogelwarte or ornithological station.

W. F. Lloyd James.

The Posting of Schedules and Show Catalogues.

A Knotty Point.

SIR,—No doubt fanciers have read the latest Board of Trade restrictions as to the delivery of tradesmen's catalogues or price lists through the post, and I presume that societies who anticipate holding shows during the coming year will come under the order, unless we can come to some arrangement with the proper persons that schedules of shows should be exempt. I am writing this so that we can make sure of seeing into the matter, and perhaps you will be kind enough to make enquiries and publish same in CAGE BIRDS, so that all concerned may know, and committees of various societies can make their arrangements, without fear.

O. C. Smith.
Sec., Reading C.B.S.

[We are making enquiries into the matter and will make the result known when an answer is received.—Editor, CAGE BIRDS]

The Disqualified Hawfinch at Bristol.

How Judges Sometimes Judge.

SIR,—Mr. House's reference to Mr. A. Birch in support of the Hawfinch incident recalls the only time it has been my fortune to enjoy Mr. Birch's company. I soon gathered he was something of a raconteur. It was at a judges' lunch, and Mr. Birch was telling us something of his experiences at shows. At one show (I believe it was in North Wales) he was asked to judge British and Canaries, because the appointed judge had not turned up, and he very humourously outlined his feelings. In choice phrases he allowed us to infer that he did not know a Goldfinch from a Seagull, so he gave the prizes to the nicest cages.

When I recall that lunch, I can imagine his feelings when asked his opinion on the Hawfinch's bib. But perhaps he has improved his acquaintance with our smaller birds since then. Anyhow, it will surely become an addition to Mr. Birch's stock of humorous after-dinner stories when in the company of his pigeon friends.

T. Johnson.

CORRESPONDENCE.

(Continued from page 138.)

A Carrion Crow as a Pet Bird.

Sir,—Perhaps a few lines about my Carrion Crow may interest readers of your invaluable paper, Cage Birds. Two years ago next May I found a Carrion Crow's nest well secured in the main forks of a tree at about 30ft. from the ground. I climbed up, and found the contents were five eggs hard-set. A fortnight passed, and I visited tho nest again. This time there were five nice young birds with their quills just beginning to shoot. As I was looking and admiring the youngsters I saw a game-keeper making for my way, and when he arrived on the scene, he told me his intentions were to destroy the old birds and the young, but I claimed the young after he had shot the parent birds.

I reared these on flesh and a little Thrush food; they were great eaters, and thrived wonderfully on it. I sold all but one, and he has turned out a champion. He talks as plainly as any parrot, mimics dogs and poultry, and whistles like a man.

I should like to know through Cage Birds if any reader has a Carrion Crow which talks. I can highly recommend them to readers who have not added one to their collection. My bird will say quite a lot of words, in fact one would think some one was conversing in his aviary if they did not know.

Stoker F. W. Stowe.

Egg Cake for Rearing Canaries.

Only Eggs and Flour Used in the Making.

Sir,—In reply to Mr. Bull, nothing whatever is added to the wholemeal flour beyond the eggs. The sugar is added (say one in eight) when the food is being measured out for feeding the birds. A private correspondent asks me if war flour will do as he cannot obtain the wholemeal, and in view of the opinions expressed when Rev. Jolliffe raised a kindred question some time ago, I have replied in the affirmative. The words "steam oven" in my first letter should have read "slow oven," of course; be sure it is a very slow oven; you will get a far thinner crust, and not such a hard one I find. Of course, the cake rises in the baking to a certain extent on account of so many eggs, and turns out a light cake.

If you take half a quartern of flonr, weight 1¾ lb., you will find the cake will weigh a good 2 lb., this will yield you rather over 200 moderate teaspoonfuls, supposing the sugar is added. Reckoning that 14 to 16 eggs are used, each dozen teaspoonfuls represents about one egg. This, of course, before the water is added.

Hy. W. Gutierrez.

Adds a Little Butter.

Sir,—In answering Messrs. Butt and Kenneth I may say that I have added a little butter on the last few occasions. I also add the sugar before baking, two teaspoonfuls to a lb. of flour, and a little salt. I beat the eggs well before I put them in, but I use no barm or anything to make it rise. I give this egg food to the hens a day or two before the young are due, and I continue till after the moult. I had a gentleman to see me about this egg cake, and he tells me that he grinds it in a coffee mill.

G. W. Grimsditch.

The Federation of Roller Canary Clubs.

One Who Will Ignore the Exclusion Rule

Sir—May I claim the privilege of your popular pages to say a few words with regard to the rule passed by a meeting of Federation delegates (not fully representative of all the Federated clubs, I believe) to the effect that no member of a Federated club shall be permitted to show at a non-foderated club's show. I am a member of the Birmingham Roller Club, also of the Midland Roller Club. Birmingham has joined the Federation, and the Midland has not. In view of this rule, then, I have to choose between one of these two clubs, as I cannot exhibit birds at both.

Well, sir, my choice is—I am going to remain in both. And I am going to exhibit at both shows, as I please. If the Federation bar my birds from their shows because I have shown at tho Midland they may do so, and in that case I shall appeal to the club of my native town, Birmingham, to be righted on the matter. I would like to point out to those who passed this rule that it will be quite as simple for a club to leave the Federation as it was for that club to join, providing there is any injustice in the government of the Federation.

I make this stand for liberty of action, and for British freedom. I claim my rights, as a member of both clubs, to remain in both, and to exhibit at both shows, and I call upon every Roller fancier to stand with me, to demand the right to exhibit his birds at any show he pleases, in spite of this rule that a handful of men at a delegates' meeting were pleased to make on behalf of the Federated clubs.

May I ask if this question has been thoroughly thrashed out, and been assented to, by the committees of those clubs whose delegates voted for the rule?

I am not against the Federation; I would like to see the word stand not for a clique of clubs, but for every club in Britain. I was never against the principles of the Federation, which, as explained to me, were an equal voice for every club in the management of the Fancy, and for decentralised shows and meetings pertaining to that management. I was against tho reform needed in the Fancy being taken out of the hands of the proper authorities, the British Roller Canary Club. But as, in the face of that club's inactivity, the Federation is an established fact, I would like to see every club take its place in the new regime, with a view to a united Fancy, and a single ring. But if the Midland decides to stand out, I say they have a perfect right to their freedom of choice; and that I, as a member of the two clubs, have as perfect a right to remain in both, and to exhibit my birds at the shows of my own clubs, whether those clubs are in the Federation or outside it.

I feel pretty sure that if this rule were brought before each of the clubs which have joined the Federation, and thrashed out at a general meeting, the rule would be smashed. I ask those clubs to discuss the matter, and, if necessary, rescind the ruling of their delegates at the meeting at which this rule was rushed upon them, and passed.

H. G. Hill.

A Suggestion as to Its Origin.

Sir,—With reference to the first paragraph in Mr. Willows' letter in Cage Birds of Mar. 3, I think he must have read the Federation Secretary's letter on the rule in your issue of Feb. 3; comment is therefore unnecessary. If he were to write from now until the crash of doom he would still be unable to get round the fact that the said rule is not in operation until next show season.

The answer to the second paragraph is contained in Mr. Tomlinson's article on Bell Glucke, where he states definitely that it was mentioned to him at the Midland Show. I readily accept Mr. Willows' word, however, that he, personally, knew nothing about it.

The fourth paragraph is not a satisfactory answer. It is not what Leeds might have done (since they were in the field with their date long before Wolverhampton), but what the latter might have done as an act of courtesy, and to avoid clashing. This was the primary cause of the short entry from Leeds. The meaning of my sentence, "We knew that," is plural, and refers to Leeds members as well as myself.

The last paragraph dealing with the British Roller Club I am not inclined to answer, unless Mr. Willows will furnish the particulars asked for in your issue of Feb. 3rd, with reference to the committee of this club. It is a straight, honest question, and I want a plain, honest reply. References elsewhere will not do. Should the question be eventually answered, fanciers will not need any assistance from myself in order to elucidate one at least of the reasons why it was absolutely necessary to form a Federation.

A. Montague.

Natural Perches for Cage Birds.

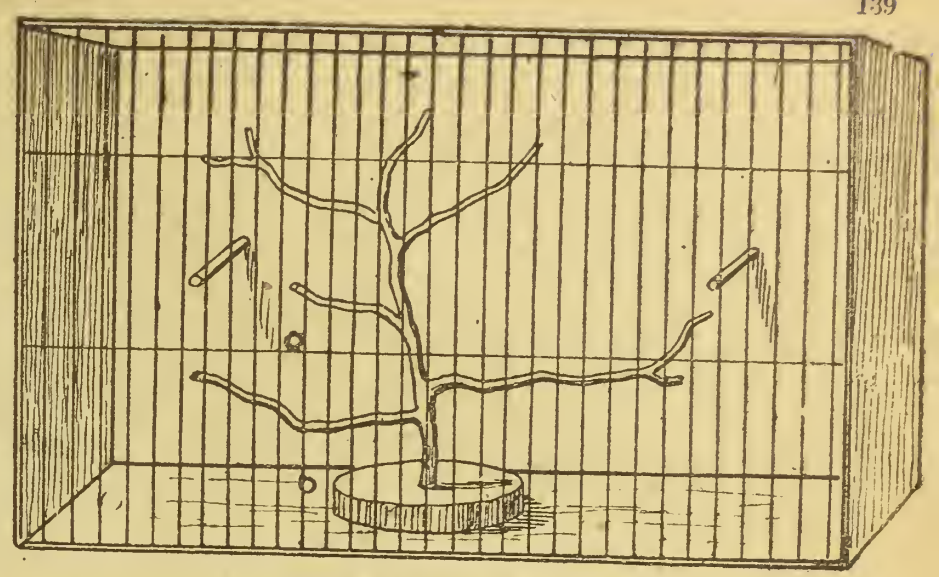
A Departure which Adds to the Appearance of the Cage and to the Comfort of the Birds.

Sir,—The articles, notes, and correspondence in Cage Birds are always so delightfully interesting and instructve that I am tempted to try and add a little in the form of a few remarks on what might be called "bird comfort."

From an artistic standpoint, and as far as I can judge from a bird standpoint, perches formed of small branches of trees, arranged to suit the particular cage, are a welcome innovation. Theso havo the advantage of affording a tapering perch and irregular positions which are to be commended, as they give a variety of grips and positions for the bird's feet.

The cage under consideration is of the box type, 30 inches long, 8 inches wide, and 15 inches high, and is the residence of two pairs of "Budgies." Every endeavour is made to give them comfort and afford them variety and amusement by having perches as described. The sketch will convey more than words, and will show that the effect is really pleasing, and gives quite a natural look to the bird's home.

The suggestion is limited to cages, because aviaries are generally better provided, and there is more scope. In the limited space of a cage it takes a little ingenuity to avoid depriving the inmates of any freedom, which is most important. The perches can be cut from any hedge when one is out walking, having an eye to suitable branches for the particular purpose, and after drying can be fitted to the cage.



A CAGE FITTED WITH NATURAL PERCHES.
(See letter on this page.)

For a stand the illustration shows a wooden disc, or base, of heavy wood 5 inches in diameter by 1½ inches thick. In the centre is a hole ¼ inch in diameter tapering to ⅜ of an inch in diameter. This tapering ensures a steady catch. The end of the branch which fits into this hole is also slightly tapered. In addition it may be necessary to have one or two ordinary spars. The branches chosen should be somewhere between ¼ inch and ⅝ of an inch in diameter.

The little extra labour entailed makes a more artistic cage for the birds than one fitted with ordinary perches, and will be amply rewarded by their interesting and inquisitive antics.

W. F. Brown.

Nets, and How to Use Them.

The Treatment of Freshly-caught.

Sir,—Having proved the value of Stoker Stowe's most interesting article, "How to Catch Bullfinches," which recently appeared in Cage Birds, I should also be pleased to read his experiences of catching with clap-nets, and saving fresh-caught Goldfinches and Linnets.

E. J. Brown.

Does Bird Catching Pay?

Sir,—I am thinking of taking up bird-catching next season, and would be glad if Stoker Stone would kindly say what size of clapnets he uses for catching Goldfinches and Linnets, also what colour net he uses (i.e., whether drab or green) on grass land. Will he also tell me what a side net is, and if bird-catching is a paying hobby? There are plenty of birds about here (Cardiganshire). Will Mr. Stone say how he gets the birds out from under the nets (when they are together) without taking the pegs of the guy lines up from the ground.

J. D. Griffiths.

Aa Offer Accepted.

Sir,—I accepted Mr. McNaught's offer in Cage Birds of Feb. 24, and paid him a visit on Saturday, March 3, at his home in Kilmaurs. We went out together with a friend of his to a field where he put down his clap-nets and explained to me how to set them, and also how to draw them for a catch. I noticed a few mistakes that I had made when I set my own nets, but everything will go right now, after seeing them set. Mr. McNaught and I would be very much obliged if F. W. Stowe would explain how he uses his side nets, his length of nets, with length of poles, and does he use them on uneven ground?

Springburn.

Nets and Rough Ground.

Sir,—In answer to Stoker Stone's question as to how I would set nets in a field as described by him, I should first find the best pitch I could, along a furrow for preference, set the nets as sketched, take out a bit of ridge to let staves lie flat, peg down the nets along the furrow, and if there were an anthill or two I should level them down a bit. I think I could get a few of the Goldies but could not be sure of hauling them in as fast as an old hand; the Goldies might not want to be handed in.

I have used nets as shown on an old sewage bed, all furrow, big stones, and rank weeds, and on water-land full of holes and big clumps of reeds, which grow on damp land, and are quite as bad as anthills.

It was after reading Mr. McNaught's letter and noting that he said nets were not used to any great extent in Holland, because of the nature of ground that I sent the sketch, thinking it might help fanciers who use nets. The way to lay nets was shown me by an old hand, who used nets, and his father, another old hand used nets before I ever thought of nets or birds. There is nothing extraordinary or in the way of a novelty about it when tried. Let us have your way of using nets, Mr. Stone, ordinary or any other way.

Yelneh.

What is a Ticked Bird?

A Definite Decision Desirable.

Sir,—Mr. Midgley's letter, defining a ticked bird, as per Yorkshire Union standard, is far from being clear, especially to the novice. Is it to be understood that a ticked bird may be a one marked or a two marked bird?

I read it that a ticked bird is one with dark feathers on thighs, rump, or any part of an otherwise clear body. It may also have a mark on one eye, wing, or tail. The very fact that a technical mark is allowed with another tick anywhere on the body makes it an uneven marked bird, but if there are more ticks than one, like Messrs. Stubbs' bird, in addition to the mark, the bird becomes lightly or heavily variegated as the case may be.

Again, taking the definition as read, "Dark feathers," etc., and supposing a bird had dark feathers all over with just one or a few light feathers on the body, would it still be considered a ticked, and what? Further, assuming that a single tick was found on the tail, apart from the body, would that be a ticked bird? and is the tail to be reckoned as part of the body? These matters need clearing up or making more simple.

It is unnatural to call a bird with ticks on the body, and a technical mark on the eye, wing, or tail, a ticked bird. It is also ridiculous to call an invisibly marked bird a ticked bird, and I adhere to my previous definition, viz., that a ticked bird is a single ticked, not one with a multiple of ticks or marks, and it is for the Fancy once and for all to specify the extent that a single tick should carry on the surface only of a bird's plumage.

I have not yet seen a ticked bird defined by Mr. House. If he is able to say that a bird is not a ticked, he should be able to say when a bird is, and what constitutes a tick without outside information, and in his own words.

J. Kershaw.

A Ruling Body After the War (Perhaps).

Sir,—I had not intended writing further on this subject, as the evidence from the bulk of the Fancy is against the disqualification, not to say the actions of those influential judges who have allowed the bird to stand under the same classification.

This individual bird has been known to Norwich fanciers in Lancashire and Yorkshire during four exhibiting seasons, and, although not technically marked according to the rules of Blakston and the Yorkshire Canary Club, it has always been considered by Norwich fanciers as a variegated bird. The classification at Port Talbot was for marked or variegated, and although Mr House does not consider it a marked, it ought to have been allowed as a variegated, and 90 per cent. of the fanciers would have let it compete.

I quite agree with Mr. House that we should have a standard classification for all breeds, but Norwich men as a whole do not consider the Blakston idea up to date, and they object to be ruled by the Yorkshire Union. They are a very powerful organisation, and are ruled by energetic and influential fanciers; still,

CORRESPONDENCE.

(continued from page 139.)

they are behind the times in regard to a few regulations, notably the one above mentioned, and the one relating to the novice £5 limit rule, which the rest of the Fancy does not recognise.

The only way out of the difficulty is for a national society to be formed on the lines laid down by Mr. Bastock, but without the ponderous machinery of the late C.B. Union. Mr. Bastock must not be downhearted because he does not get sufficient support for the scheme. Most fanciers are in favour of it, but we are passing through times of stress, and fanciers are relegating other matters to the background. If I may offer a suggestion, I should say wait until more favourable times before launching a scheme of such importance.

I cannot agree with Mr. House in his remarks regarding the judge's interpretation of the schedule. I believe in my own mind that the Port Talbot Committee in drawing up the schedule as they did, viz., "cl. or tkd," intended clears and almost clears to compete together, leaving the other class for birds with more variegation; in fact, the Fancy's definition of a tick is a bird that is almost clear. That is the most popular definition, and we cannot afford to run counter to popular opinion.

Mr. House does not strengthen his case by resorting to cheap sarcasm about my Fancy knowledge. It does not need a twenty years' old discussion to teach anyone anything about so simple a subject. It can be learned in five minutes. I simply quoted a few sentences which seemed to me to put paid to some of his arguments of to-day. He said then that two colours make variegation. He does not deny it, and I do not notice that he has altered his opinion. That being so, these questions arise: Is Stubbs' bird a two coloured bird? And was the class at Port Talbot for variegated birds?

I can assure Mr. House that the volume of "Fur and Feather" was given me by Mr. Cook for a very different purpose to the one he suggests, and if he knows Sam as well as I know him—and I am sure he does—he knows that Sam will be very grieved at his suggestion. It was a genuine coincidence that those letters attracted my notice; and the fact that he is so incredible points to a few uneasy moments. Anyhow, Mr. House is nothing if he is not an old hand at the controversial game of literary hide and seek, and it is only to be expected he would make a brave show.

I admire Mr. House's principles. He looks with disfavour on backsliding in whatever form it appears; and I do not like a judge who is as clay in the hands of all exhibitors. When a bird should be disqualified for any reason, I like to see a big label on its cage saying so; but I cannot help thinking that sometimes he allows his zeal to overcome his discretion.

T. Johnson.

Simplicity Makes for Clearness.

Sir,—Messrs. Stubbs say it is very difficult to define a tick in a way that would be accepted by all. That is because in these latter days fanciers have tried to split hairs.

I believe in simplicity, and the definitions of classification should, in my opinion, be the same for all varieties. It used to be so years ago, and the only instance I can remember of a dispute in the days when I was an exhibitor, was in 1886, when Blakston admitted a four-marked Norwich of Mr. Goatcher's in a variegated class in a show at the Albert Palace, Battersea, although an even-marked class was provided.

I was one of those who thought Blakston wrong. When a class is provided for a certain kind of bird I hold that it should go into that class, but I like to view these things as a sportsman, and endeavour to let the spirit of the Fancy guide me rather than mere technicalities.

That was the line I took in the Cheltenham case, to which Mr. Johnson referred, and it was also the line I took at Aberavon. I, therefore, can at least claim to be consistent seeing that thirty years ago, twenty years ago, and at the present time I have held the same opinion.

Every bird that has a mark or tick of the most minute character is variegated, but the Fancy does not so read it. The Albert Palace case had most to do with the introduction of the wording "unevenly marked." One of the strongest advocates of that wording was Mr. T. Heath who, like myself, has always tried to work for simplicity in classification.

Messrs. Stubbs ask what I should have done had there been no class provided for clears or ticks. This question, as put, is rather vague, but I will try to give a definite answer. Had Class 55 at Aberavon, "Clear or Ticked," had no existence, and Class 56 had read as it did, "Uneven, or Variegated," I should not have wrong classed their bird. Why? Because I could not have agreed it was not eligible for Class 56.

Even had Class 55 read "Clear," only I should have admitted the bird in Class 56. A judge must be governed by the wording of the schedule. A ticked bird, like an even-marked bird is variegated, the first representing the lowest form of variegation, and the latter the highest.

But when special classes are provided in a schedule for ticked, and (or) evenly-marked birds, I hold that they can only be shown in those classes. I take it that at Aberavon the officials who drew up the schedule intended that ticked birds should be shown in the class provided for "Clear, or Ticked," and not in that for "Uneven or Variegated," and that was the spirit in which I judged.

Certainly Messrs. Stubbs' bird is a two-coloured bird. It could not be a ticked bird unless it had two colours. I have explained this before, even as I have explained it again in the previous paragraph. Messrs. Stubbs say my explanation to Mr. Johnson was a failure. They are at liberty to think so. I do not. I would refer Messrs. Stubbs to their first letter on Dec. 2. Their contention was that the bird I wrong classed is a "marked" bird, and they made a money challenge on that point. Now they talk of two-colours and variegation. Why? Because I, some weeks since, gave the actual wording of the two classes at Aberavon. In answering Messrs. Stubbs' first letter I said their question should have been: "What is a Marked Bird?"

As to sitting upon Mr. Allsopp. Never! I answered Mr. Allsopp's contentions. In the early part of their last letter Messrs. Stubbs say they will not bring in the names of those who said I was wrong, but they do not hesitate to mention Messrs. Allsopp, Houghton, Robson, and Roe, in the latter part. I suppose these are the four judges who have awarded the bird first prizes. But, as I have said before, it does not follow that I am wrong, or they right. It all depends on the classification.

Twice I have asked for the classification at the shows, not knowing who the four judges were, but that question has never been answered. From this I conclude the wording was not the same as at Aberavon. If so, it is quite possible the four gentlemen named were right. But the point in this discusion has been the classification at Aberavon, and my decision under it, not what took place at other shows, of the classification of which I know nothing, and not even the name of the shows. Only in their last letter have Messrs. Stubbs given us the names of the four judges. Messrs. Stubbs do not say it plainly, but they insinuate that I have said these four gentlemen are unable to define a tick. I have not. Neither do I say so now.

Messrs. Stubbs also infer that I have said only my opinion "should stand final." Not so. In Cage Birds of Jan. 13, I said if the Norwich Clubs gave us a ruling of what they consider a ticked bird, I should accept it, even though it was against my own opinion.

I am in hearty agreement with the last paragraph of Messrs. Stubbs' lotter, and I can assure them I entertain nothing but good will towards them.

In Reply to "Old Hand."

"Old Hand" says we cannot have clearness and simplicity. Few people will agree with him. I have always understood that these two naturally followed each other. As to what he says about what constitutes a tick, I agree that any small mark is a tick. "Old Hand" cannot understand my saying that "invisible ticks" and "variegated" court trouble. First of all these so-called "invisible ticks" are sometimes visible owing to slight derangement of plumage. What then becomes of their invisibility? As to "variegated" it is a loose term, and covers everything outside of "clear" when used generally, and it is because of its being used generally instead of specifically that the trouble arises.

"Old Hand" draws attention to a certain classification, and asks an abstract question which does not at all help in the settlement of the concrete question which arose at Aberavon. The classification which he quotes is one that is not on all fours with that which was scheduled at Aberavon. It is more detailed, and I should say little difficulty would be experienced in deciding for which of the three classes a certain bird was eligible.

C. A. House.

[This letter must be the last upon the much debated question whether Mr. House was right or wrong at Aberavon. It is a matter of opinion which will never be settled satisfactorily. We shall be glad to find room for short letters devoted to the establishment of a classification which will preclude such differences of opinion in the future, but the letters must deal with this phase of the subject only. The personal side is now closed. —Editor, Cage Birds.]

CLUB AND SOCIETY NOTICES.

ONE NOTICE of any forthcoming Society meeting inserted free. It must reach us not later than Tuesday morning's post. Specially printed Club Notice Postcards may be had free on application to any Manager. Secretaries should always use them.

NOTE.—Only the details asked for on our cards can be published. Such phrases as "a large attendance desired," etc., must not be included. Classification for forthcoming shows, appeals for new members, and any other matter in the nature of an advertisement will only be inserted if paid for at advertisement rates.

Alfreton C.B.S.—Mar. 10, Red Lion Hotel, 6.30. General meeting; table show of mules and hybrid pairs; W. Evans, judge. Birds staged 6.30; special in each class.—G. Sawer.

Bolton Roller C.C.—Mar. 13, Joiners' Arms, 7.30. National Fed. rule books and song tours; important business.—T. Ormston.

Barry F. and F.S.—Mar. 10, Headquarters, 7.30.—H. P. Thomas.

British Roller C.C.—Mar. 13, 7.30.—J. W. Norris.

Barrow C.B.A.—Mar. 10, Weights and Measures Office, 7.30. Washing competition for novices; judges for Nest Feather; and general business.—T. A. Croft.

Clydebank C.B.C.—Mar. 15, Morrison's Restaurant, Kilbowie Road, 7.45. Nomination of Judges, annual show, and other important business.—R. McCardle.

City of Bradford O.S.—Meeting for Mar. 10 postponed, owing to Yorkshire Union prize distribution.—J. Bolton.

City and Suburban A.C.B.—Mar. 12, Church Institute, 60, Paddington St., Baker St., W., 8. Lecture by H. Norman, on "Topical Items."—F. J. Martin.

Crystal Palace and Penge C.B.S.—Mar. 14, Alexandra Hotel, Penge, 7. Lecture by Mr. Martin on "The Basis of a Strain." Orders for pepper should be sent at once.—W. D. Fryett.

Hull Roller C.C.—Mar. 15, Argyle House. Business important; rings now to hand.—A. Baggaley.

Houghton-le-Spring C.B.S.—Mar. 10, Queen's Head Inn, 7.30. Usual business.—R. H. Dixon.

Huddersfield O.S.—Mar. 12, White Hart Hotel, 7.30. Monthly table show, 8 classes Yorks., 2 Nor., all cocks; judge, Mr. H. Mallinson.—A. Lawford.

Ilkeston C.B.S.—Mar. 10, Castle Inn, 7. Settling up for table shows.—T. Smith.

Landore, Plasmarl C.B.S.—Mar. 10, George and Dragon, 6.30.—Hy. Fry.

Leigh C.B.S.—Mar. 4, Railway Hotel, 7.45. Orders for nest linings and rings to be given in.—R. Charleson.

Larkhall C.B.A.—Mar. 17, Y.M.C.A. Halls, 7. Canary washing exhibition by president and vice-pres.—A. Thomson.

Lanarkshire British, Mule and Specialist Club.—Mar. 17, Sloan's Restaurant, The Arcade, 100, Argyle St., Glasgow, 6.—W. F. Campbell.

Manchester and N. Counties O.S.—Mar. 12, Deansgate Hotel, 8. Table show of Borders; judge, Mr. C. Dooley; and general business.—F. Wilkinson.

Maesteg C.B.S.—Mar. 17, Bird-in-Hand Hotel, 7.30. Members not having paid levy towards cost of trophy kindly do so at meeting.—O. Williams.

Newsham C.B.S.—Mar. 17, Institute, Newsham, 7.30.—W. Gibb.

Members' Shows.

NOTE.—Secretaries will greatly facilitate the work of ourselves and our printers if they will kindly endeavour to send their reports as nearly as possible as they see these accounts printed, and if they will also write the names of exhibitors as distinctly as possible.

SOUTH SHIELDS (Always Ready).

Annual pair and British show, Feb. 24, St. Thomas's Institute, with 40 entries. The exhibits were well arranged by the Stewards, Messrs. R. Stephenson, R. Honeyman, W. Thompson, and J. S. Dixon. Norwich were a good collection, and Brit. were of good quality, Mr. C. Waters taking spl. best exhibit in show with a splendid Goldfinch, W. Duke won spl. most points, W. Thompson spl. best Nor. pair, G. Greenwell spl. best Bord. pair. Mr. W. Reid (Sunderland) judged, and his awards were very satisfactory. Nor. Pairs (10): 1, Thompson; 2, Watson; 3, hc, c, Dixon; vhc, Stephenson. Crests: 1, 2, 3, Duke. Bord.: 1, Greenwell; 2, 3, Duke. A.O.V.: 1, Duke. Mule or Hyb. Pair: 1, Duke; 2, Simpson. Goldf. or Bullf.: 1, Waters; 2, Peacock; 3, Dixon; vhc, Stephenson; hc, Curry. Linnet: 1, 2, Curry; 3, Waters; vhc, Peacock. Greenf.: 1, 3 Duke; 2, Simpson; vhc, Curry. Siskin, etc.: 1, Peacock; 2, Waters; 3, Curry. A.O.V.: 1, Waters; 2, Curry; 3, Dixon. Softbill: 1, Curry.—J. W. Watson, Sec.

ABERDARE C.B.S.

Annual table show. Nor. Ck: 1, 4, Morris; 2, 3, hc, c, W. Davies; vhc, J. Davies. Yell. Hen: 1, W. Davies; 2, Reynolds; 3, J. Davies; 4, Morris. Buff Ck.: 1, 3, J. Davies; 2, Stansfield; vhc, G. Davies; 4, hc, W. Davies. Hen: 1, 2, W. Davies; 3, J. Davies. Unflig. Yell. Ck.: 1, W. Davies; 2, G. Davies; 3, 4, Evans. Hen: 1, Evans; 2, 3, J. Davies; 4, W. Davies. Unflig. Buff Ck.: 1, vhc, hc, Joe Davies; 2, 3, Morris; 4, J. Davies. Hen: 1, J. Davies; 2, G. Davies; 3, Reynolds; 4, Joe Davies; vhc, Morris. Yorks. Yell. Hen: 1, G. Davies; 2, 3, Morris. Ck.: 1, Morris; 2, G. Davies. Goldf.: 1, 2, 3, 4, hc, vhc, T. Davies. Linnet: 1, 3, T. Davies; 2, C. Morris; 4, Evans. Bullf.: 1, T. Davies. Redpoll: 1, C. Morris. Mules and Hyb., A.V. Mule: 1, 2, 4, vhc, T. Davies; 3, Jones. Hybrid: 1, G. Davies; 2, Jones. Selling: 1, G. Davies; 2, Jones. Pairs: 1, 4, Reynolds; 2, 3, vhc, G. Davies. The society has now changed its headquarters to the "Prince of Wales" Hotel, where Mr. W. Davies was presented with the members' cup for most points last season. Mrs. Wilson kindly gave a donation to our funds. Our late secretary having been in the Army for some time, I am doing the work until he returns. All communications should be addressed to 24, Davis Street, Aberaman, Aberdare.—A. J. Evans, Sec.

H. C. Legg, Hon. Sec.

The Opinion of a Noted Fancier—
"IT MAKES BIRD BREEDING EASY."

THE STOCK BOOK

Simplifies the operations in the Bird room and makes it possible for everyone, even the veriest novice, to breed his birds as they should be bred. It affords facilities for the recording of the complete pedigree of all your birds; of your experiences during the season; an account of every bird reared. Contains also Pedigree, Breeding, Young Bird and Show Registers of simple and unique character; Cash and Profit and Loss Accounts for the year. Gives valuable hints for times of emergency during the breeding season.

Price 6d., from your Newsagent, or 7d. (postal order), post free, from "CAGE BIRDS," 154, Fleet Street, London, E.C.

Club Reports.

PLUMSTEAD AND WOOLWICH.

Meeting, Trinity Schools, Feb. 27, Mr. Newnham, chair. Decided to carry on programme for 1917. The meeting night is changed to the second Tuesday in each month. Pair and Finch show, Mar. 13, Mr. Taylor, Leytonstone, judge. Diploma for best pair. Five new members were elected, one rejected. Members are asked to make pair show a success. A few items left over till next meeting.—Geo. H. Maclellan, Hon. Sec.

SOUTH MOOR (Social Club).

General meeting, Feb. 25, Mr. Taylor, chair, with a good attendance. Mr. Taylor was elected chairman. Messrs. Roxborough and N. March, auditors; and Mr. Lane, sec. There was a big discussion about rules. Rule 5 reads: "If a member be found guilty, twelve months after the show, of showing wrong exhibits, he will be debarred from showing at any future show." Rule 6: "If there are only 5 birds in a class and no competition, they shall only receive 2nd and 3rd prize-money." Rule 7: "If a member does not attend four meetings in a year he will be debarred from exhibiting."—Geo. Lane.

NORTHERN NORWICH P.C.

Annual meeting, Feb. 24, Shield's Cafe, Mr. J. W. Lawson chair. Balance-sheet was presented, which showed a balance of over £3. Officers for 1917, Pres. and Vice-Pres. as in 1916; Chairman, Mr. H. Wellsbury; Vice-Chair, Mr. J. W. Lawson; Auditors, Messrs. Carey and Matthewson. Sec. and Treas., F. W. Laidlow. Specials for 1916 are not yet to hand, but have been on order for several weeks and will be sent to winners on arrival. Particulars as to membership will be supplied on applying to F. W. Laidlow, 55, Colston Street, Benwell, Newcastle-on-Tyne.

SOUTHAMPTON C.B.S.

Meeting, Feb. 28, Mr. G. G. Fellows, chair. The chairman, in referring to the great loss the society had sustained by the death of Mr. S. Foyle, said he was desired by the widow to express her appreciation of the wreath and letter of sympathy sent by the society. The vacancy on the committee was filled by the election of Mr. Welsh. Table pair show was held, the entry being small, but some very promising birds were on show. Mr. Fellows judged Yorks., and Mr. Melhuish Norwich, etc. Best in show (champion) was awarded to Mr. W. J. Love for a pair of Norwich, and best novice to Mr. A. C. Winter (Yorks.). A judging competition, as usual, created much interest, the winner being Mr. A. C. Winter. Nor. Buff Ck., Yell. Hen: 1, Love; 2, Vale; 3, Bagg. Yell. Ck., Buff Hen: 1, 2, 3, Love; vhc, Vale. Yorks. Buff Cock, Yell. Hen: 1, Hayter; 2, Gentry; 3, A. C. Winter. Yorks. Yell. Ck., Buff Hen: 1, Hayter; 2, A. C. Winter; 3, vhc, Gentry. Muling Pairs: 1, 3, vhc, Alderslade and Clark; 2, Vale. Hybrids: 1, 2, vhc, Alderslade and Clark; 3, Vale.—G. J. Slade, Hon. Sec.

DULWICH AND PECKHAM C.B.S.

Annual pair show, Reindeer Hotel, Feb. 20, with a splendid entry, and some tip-top birds were staged. The Norwich and Yorkshires were a grand lot in both sections. An excellent attendance of members and friends helped to make the show a complete success. Mr. F. J. Martin won spl. best pair, and Mr. Geo. Sands spl. most points. Winners of other specials: Messrs. Hall, Dracup, Saunders, Humphreys. Mr. Robson judged, and afterwards made a few remarks on the birds staged.

Champ. Nor., Yell. Ck., Buff Hen (6): 1, Martin; 2, 3, Cole; 4, Clements; vhc, Gilbert. Buff Cock, Yell. Hen (9): 1, 2, Martin; 3, 4, vhc, Cole; hc, c, Clemmence. Yorks., Yell. Ck., Buff Hen (8): 1, 4, Hall; 2, 3, vhc, hc, Sands; c, Andrews. Buff Cock, Yell. Hen (10): 1, 3, Hall; 2, vhc, hc, c, Sands; 4, Andrews. Nov. Nor., Yell. Ck., Buff Hen (6): 1, 2, Dracup; 3, hc, Atkins; 4, Roberts; hc, Whiffin. Buff Ck., Yell. Hen (4): 1, Atkins; 2, Dracup; 3, Whiffin; 4, Roberts. Yorks., Yell. Cock, Buff Hen (3): 1, Saunders; 2, 3, Field. Buff Cock, Yell. Hen (2): 1, 2, Saunders. Muling: 1, 2, Humphreys.—W. Hodson, Hon. Sec.

QUEEN'S PARK (Glasgow) C.B.S.

Meeting, Y.M.C.A. Rooms, Feb. 28, Mr. R. B. Cairns presiding over a good attendance. Decided again to hold annual show, Dec. 1, in Victoria Rooms, Crosshill, the chairman expressing the hope that every member would endeavour to make the show a success by sending as many exhibits as possible. Judges were nominated and names will be published on acceptance. Table show for British in the above rooms, fixed for Mar. 17; birds staged at 3.30; judging to commence at 4. Goldf., Bullf., Greenf., Linnet, Siskin, Mealy Redpoll or Twite, Lesser Redpoll, hens for Hybrid breeding, Light Mule or Hyb., Dark Mule, Any Variety not classed.

The event of the evening was the demonstrative lecture given by Mr. R. Jeffrey, on the pairing of birds, which was interesting and educative to old members and novices alike. He had a number of birds with him to show the good qualities and points, as well as the bad ones, and he told the meeting how with careful and judicious mating some of the good qualities can be retained and some of the bad ones eradicated. The members accorded him a hearty vote of thanks for his instructive lecture, and he promised at some future date to say a word or two on rearing and colour-feeding. The chairman intimated that Mr. Davidson, of Mossend, had promised to give a lecture at the March meeting, the secretary being instructed to make all arrangements. A vote of thanks to the chairman closed the meeting.—A. Foreman, Sec.

THE POULTRY WORLD.

The up-to-date, efficient poultry journal. Every number grandly illustrated and full of practical articles by experts. Invaluable for the beginner and the amateur.

Every Friday, 1d.

Advertisement Forms & specimen copy from "POULTRY WORLD," 154, Fleet St., London, E.C.

NEWCASTLE EAST END.

Meeting, Blue Bell Inn, Shield's Road, Feb. 23, presided over by Mr. W. Espie. Members elected: Mr. J. Scott and Mr. T. Farr. Proposed as members: Messrs. Slater, Wright, and Wilson. There was also a table show, but only a moderate entry. Pair Nor.: 1, Kindness. Crests: 1, Kindness. Cinn.: 1, 2, Roy. Bord.: 1, Espie. Green and Cinn.: 1, Lucas; 2, Eades; 3, Espie. A.O.V.: 1, Coltman. Linnet: 1, 3, hc, Coulthard; 2, Coltman; hc, Espie. Greenf.: 1, 3, Coltman; 2, Newton. Bullf. and Goldf.: 1, Espie; 2, Coulthard; 3, hc, Newton; hc, Scott. A.O.V.: 1, 2, 3, Coltman.—E. Coltman, Sec.

BLAENAVON C.B.S.

Meeting Mar. 1, Crown Hotel Assembly Rooms. Mr. J. Pitt presided over a good meeting. Sec. read a letter from the Red Cross Society, showing that a sum of £3 10s. had been paid them, this being the profit of our last open show. Decided that we hold our open show for 1917 on Nov. 1, and that the Sec. see about getting it in "Show Dates Fixed." Sec. to write Mr. J. Robson, London, to judge, and report at next meeting. Classes fixed for N.F. show, and specials came in galore. Anyone wishing to give specials please do so by next meeting, so that we can fix up the prize money for same. New members elected: J. Durham, J. Styles, and C. Brewin. Fanciers who desire to join please attend next meeting, Crown Hotel, Broad Street, April 5, at 6.30.—Geo. Broome.

HULL C.B.S.

Meeting and show held Oddfellows' Hall, Mar. 3, Mr. D. D. Longhorn chair, with a good attendance and a record number of entries for the show—Canary cocks and British. Messrs. Harland, P. P. Potter, W. E. Sowden, and Crawforth were the principal winners in the Norwich classes. The excellence of the birds shown in the novice Yorks classes was freely commented upon, Mr. W. Fox winning both the yellow and buff classes with two gems, full of type and quality, his buff being a shade too good for Mr. Towse's runner-up, both birds having a creditable record on the bench, this making Mr. Fox's 12th first and still unbeaten, whilst this is the first time Mr. Towse's bird has been placed second. Mr. Freeman was the runner-up in the yellow class. Mr. Macpherson staged an excellent show of British. Mr. W. E. Sowden judged Yorks, and Mr. W. T. Pepper Nor. and Brit., and gave every satisfaction. This closed our second successful show this year, and we are looking forward with enthusiasm to the coming breeding season. Three new members were enrolled.—W. Furnandiz, Hon. Sec.

NORTHERN YORKSHIRE C.C.

The N.Y.C.C. held a supper and presentation at Shield's Cafe, on February 21, when a good number of members and friends turned up to partake of the good things prepared for them. Mr. Wigglesworth occupied the chair, and after supper presented the president, Mr. Crawhall, with a silver-mounted black ebony walking stick, and the late sec., Mr. Havis, with a case of briar pipes, both presents being subscribed for by the members. The chairman, in making the presentation, spoke in glowing terms of the work of both gentlemen, and hoped they would have long life to use the presents. Both replied and thanked the members who had subscribed. Decided to try and make our society stronger in membership, and we give any Yorkshire fancier in the district a hearty invitation to join us. Our next meeting will be held at Shield's Cafe, Mar. 14, at 8, when we would like to have a good number of new members. We would like to see some of the Chester-le-Street Yorkshire fanciers join us. Members please let Mr. Crawhall know how many closed rings and how much colour food they will be wanting, so that he can put same on order as early as possible. At next meeting business is important.—Wm. Mather, Sec.

NEWCASTLE C.B.S.

Meeting, March 1, Shield's Cafe, Bigg Market, Mr. G. Dobson chair until the arrival of Mr. T. C. Crawhall, before one of the best meetings held for some time. New members elected, Messrs. Reed and Collins, Montague, Thwaites, and Thomas. Owing to the various opinions as to ticks and marks in Canaries since the disqualification of the bird referred to of late in CAGE BIRDS, we decided to hold a discussion on same. Birds with different markings were brought by Messrs. T. C. Crawhall, W. Copie, and S. Lomas, also plates and Blakston's book by Mr. Maddison. Mr. Priestley (Halifax), now in the Army and stationed in Newcastle, attended and explained the rules of the Yorkshire Union. Several members spoke on the subject, but different opinions were still held on the bird in dispute. The majority seemed to think it a marked bird and that times had altered considerably since the days of Blakston, and it was time something should be done to put the matter right, so as to cause no trouble in future show seasons. The question was asked if Blakston was the only authority on Canaries, and one member present who knew him, said he was the man when living, and we had never come across a better yet. This caused an interesting discussion. At our next meeting Mr. J. Johnston (Wallsend) has promised to give us his experience on rearing young, so we invite all to come and hear this most successful breeder of the North. New members welcome.—F. W. Laidlow, Sec.

MANCHESTER AND N.C.O.S.

General meeting and table show of Yorks. and Norwich, Deansgate Hotel, Feb. 26. Mr. Raynes presided. Mr. Thos. Atkinson, an old member of the society, judged Yorks., and Mr. F. Wilkinson Norwich. There was a good muster of birds, Nor. in particular; also a good attendance, and it was a very enjoyable evening. A hearty vote of thanks to the judges was strongly supported by Mr. Fairhurst. Mr. Atkinson responded, thanking those present and remarking that he was jealous of the society as to the progress it had made, since he was not able to be amongst the old faces which had always been a pleasure to him in years gone by. Mr. Dooley won most points Yorks, Mr. Riley most entries. Mr. Mitchell most points Norwich.

Yell. Yorks Ck. (5): 1, Drew; 2, Dooley; 3, Bottomley; 4, Green; vhc, Riley. Buff (4): 1, Dooley; 2, Bottomley; 3, Riley; 4, Drew. Yell. Hen: 1, Riley. Buff (2): 1, Riley; 2, Green. Yell. Yorks. Ck. and Buff Hen (4): 1, Dooley; 2, Drew; 3, Green; 4, Riley. Buff Ck. and Yell. Hen (4): 1, Dooley; 2, Riley; 3, Green; 4, Drew. Yell. Ck. (9): 1, Green; 2, Cook; 3, vhc, hc, Turner; 4, Warburton; c, Mitchell. Buff (7): 1, c, Cook; 2, 4, hc, Mitchell; 3, A. G. Smith; vhc, Raynes. Yell. Hen (3): 1, Mitchell; 2, Raynes; 3, A. G. Smith. Buff (9): 1, Mitchell; 2, hc, Turner; 3, Green; 4, vhc, Warburton; c, A. G. Smith. Yell. Ck. and Buff Hen (10): 1, Green; 2, vhc, Warburton; 3, c, Turner; 4, Raynes; hc, Cook. Buff Ck. and Yell. Hen (4): 1, Mitchell; 2, Raynes; 3, Green; 4, A. G. Smith. Green A.V. (5): 1, 4, Hayward; 2, vhc, Raynes; 3, Turner. Classification for Borders at next meeting, and table show will be Cock, A.V.; Hen, A.V., Green or Cinn; Cock, A.V.; Hen, A.V.; A.O.V. Can., except Norwich and Yorks.—J. Green, Hon. Sec.

SUNDERLAND C.B.A.

Meeting, Feb. 24, Station St. Cafe. Mr. Farrar presided over a good attendance. The chairman gave the members present a few hints on how to make a drying cage. It was decided to give a series of lectures at forthcoming meetings. Mr. Farrar promised to give the first at next meeting, Mar. 10, on his experiences of breeding the Yorkshire Canary. It is hoped that the members will turn up in full, and we shall also be glad to see any fanciers in the district who would like to hear what Mr. Farrar has to say on this particular subject. Mr. G. Davidson also promised to give a lecture on the Lizard Canary, and Mr. J. Riseborough will give a dry washing exhibition; dates for these will be announced later. Mr. J. Copeland was elected treasurer, owing to the resignation of Mr. G. Davidson. New members were elected: Mr. J. W. Watson and G. Greenwell.—F. Riseborough, Assist. Hon. Sec.

LANARKSHIRE B,B., M., & S.C.

Meeting, Sloan's Restaurant, The Arcade, 100, Argyle Street, Glasgow, Mar. 3. Sample cages from James F. Dewar, Edinburgh, were for inspection, and a friendly discussion ensued. The cage for Bullfinch, Greenfinch, Bramblefinch, etc., and the cage for Linnet, Goldfinch, Larger Redpoll, or Twite, were very much admired and approved of. The cage for Hawfinch, etc., was considered 1½ins. too high, and the Redpoll and Siskin cage ¼in. too low. Agreed to leave over the adopting of these cages until next meeting, Mar. 17, at 6, when they will again be on view, and we hope that all members and those desirous of becoming members will be present. The secretary would be pleased if those at a distance, who cannot see their way to be present and still wish to support this big push, would send on their membership fee, which is only 2/6 per year.—Wm. P. Campbell, Sec. and Treas.

GLASGOW & W. COUNTIES CLUB

Special meeting, Feb. 24. Messrs. A. McFarlane and H. McDonald were admitted members. Mr. J. H. Adam lectured on "Breeding, Moulting, and Colour-feeding," which proved highly interesting and instructive, and at the close he was cordially thanked. Meeting and show, Mar. 3. Mr. A. McFarlane was elected auditor in room of Mr. FitzPatrick. The following were elected officers for season:—Pres., Mr. Wm. Dinwoodie; vice-pres., Messrs. Jas. Findlay, Jas. Cross, Jas. McGowan, and P. Eccleston; committee, Messrs. Wm. Cassells, Wm. Jack, F. McGowan, D. Dinwoodie, and R. Steel; treas., Mr. Wm. D. Fraser, 20, Maull Drive, Partick; minute sec., Mr. T. McMillan; hon. sec., Mr. J. H. Adam, 15, Alexander Street, Sandyfort; auditors, Messrs. Geo. Bannerman and Alexander McFarlane. The rules were carefully gone over, and in one or two cases amended.

Owing to Glasgow Spring Holiday, the next meeting will be held Mar. 31, when balance sheet will be read), in lieu of April 7. The management would thank all members who are indebted to the club to have same squared off as early as possible, either to the treasurer, Mr. Whitelaw, at 83, Cardross St., Dennistoun, or to sec.

A special Linnet show has been fixed for April 14; two classes H.M. and F.M. Specials for same have been kindly promised by Messrs. Fraser, 5/-; Macfarlane, Pettigrew, and Wm. Dinwoodie. Specials for table show were given by Messrs. Johnstone, 2/6; Eccleston, 2/6; P. Pettigrew, 2/6; Wm. Dinwoodie, 2/-. Mr. Jas. Findlay and Mr. Alex. McFarlane judged. Hybrid Pairs, Bullf. Hen Cross: 1, spl, Pettigrew, Goldf.-Bullf., 2, 6, D. Dinwoodie, Greenf., 3, Bannerman, Linnet; 4, Jas. McGowan, Goldf., 5, 7, Jack. A.O.V.: 1, 2, Pettigrew, Goldf.-Greenf. and Goldf.-Siskin. Goldf., Muling: 1, 3, Pettigrew; 2, D. Dinwoodie. A hen in this class was singing lustily. Linnet, Muling: 1, Geo. Bannerman; 2, spl, D. Dinwoodie; 3, Pettigrew. A.O.V.: 1, 3, spl, 4, spl, 5, Pettigrew, Greenf.-Can., etc.; 2, D. Dinwoodie, Siskin-Can.

Next meeting and table show, March 31; classes: Goldf., Linnet (H.M.), Siskin, Linnet (F.M.). Don't forget, great Linnet rally and judging competition, for good prizes and specials, April 14, at Headquarters, 122, Ingram St., at 7. Prospective members invited. The one-fancier one-club cage bird society in Glasgow. Particulars can be had from the hon. sec., J. H. Adam, 15, Alexander Street, Sandyford, Glasgow.

SCOTTISH PLAINHEAD CLUB.

Annual general meeting, 142, High-st., Edinburgh, Mar. 3; Mr. Grewar, Lochgelly, presided over a good attendance of local fanciers, and a few from Glasgow and Fifeshire. The financial statement was read, and showed a handsome balance of £17 14s. 9½d., and a membership of 148 members at the end of the season. The financial statement was adopted. The ballot for officials resulted as follows: Committee, West Section: A. Maxwell 25, A. Sloan 22, W. Hutchinsou 18, J. McLay 17, A. Chalmers 15, R. B. Cairns 15; Northern Section: W. Grewar 33, W. Allison 33, G. Mitchell 23, A. G. Forrest 20, A. Harris 20, J. C. Murray 16; Eastern and Southern Section: J. Winter 34, W. Aitchison 33, A. G. Cameron 25, A. M. Gardiner 24, J. F. Dewar 26, S. Buglass 21; auditors: W. Hutchinson 25, J. F. Park 24; scrutineers: W. R. Finnie 15, J. F. Dewar 14; judges: A. G. Cameron 25, E. Barron 22, W. Grewar 18, A. Maxwell 18, W. Simpson 17, A. Harris 16; sec. and treas., E. Barron 45.

Gold medal for best young cock was won by Mr. G. Mitchell, Brechin, and Mr. J. Braid, Bishopbriggs, won gold medal best young hen. Silver medals at open shows were won as follows:—Brechin: J. Dalgety and W. Allison; Ayr: D. Harper and J. Kerr; Irvine: W. Connelly and R. Colley; Larkhall: A. Harris and J. Gallacher; Glasgow and District: G. Mitchell and A. H. McLean; City of Glasgow: P. Houston and W. Simpson. At the local club shows the medals were won as follows:—Glasgow and West, R. B. Cairns; Partick, A. Maxwell; Lochgelly, M. Smith; Glasgow West End, J. Braid and J. Procter; West of Scotland, J. Black; Queen's Park, M. Stewart; Edinburgh and District, J. Procter, Leith; Edinburgh Norwich, A. Bell; Dumfries, D. Devoy; Springburn, A. Crawford. Decided that at local shows the silver medals given by the club be awarded for the best unflighted bird. Mr. Grewar proposed that the young birds at the club's annual show be judged by the judge having the most votes in the annual vote by ballot; Mr. Nelson seconded. Mr. Winter, seconded by Mr. Houston, moved the previous question. Mr. Grewar's motion was accepted by 8 votes to 7. Decided to pay judges' fee at the annual club show. Decided also that the standard show cage of the club be wired with eighteen wires. Members elected: J. Burnett, R. Bryce, J. Beattie, J. Cuthbertson, W. Crawshaw, W. P. Campbell, T. Cook, J. Cumming, M. Clarke, E. Docherty, E. Hales, A. Hamilton, J. Johnstone, J. Muir, J. Murdoch, P. Mason, D. Main, D. Morrison, G. E. Robertson, A. Robertson, J. Sykes, J. Simpson, T. Sherridan, J. Smyth, J. Sheen, J. Aric, and D. Hannah. Closed rings can now be had from the sec. Meeting terminated with a vote of thanks to the chairman. Fanciers anxious to join the club are requested to communicate with the sec.—E. Barron, 119, Montrose Street, Glasgow.

BIRKENHEAD B.B.A.

Meeting, May 1; members elected: Messrs. T. Bunker, T. Evans, J. Rennie, S. Sprage, W. Barr, J. Lucas, and W. G. Hunt. Syllabus for next four months: April 5, selection of judges and general business; May 3, lecture on "How to feed and wean young birds"; June 7, arrangements for nest feather shows; June 16, 1st N.F. show; July 5, open night and arrangements for second N.F. show; July 21, second N.F. show. Mr. Wakem, 16, Clifton Road, Birkenhead, will be pleased to hear from any fancier who would like to join. Meetings first Thursday of each month at Abbott's Cafe, Market Street, Birkenhead, at 7.30; subs., 2/6. Mr. J. Darlington has promised to become our vice-president; his name was not mentioned in our last officers' list.—H. Wakem, Sec.

LEEDS ROLLER C.C.

Meeting, Mar. 3, Griffin Hotel, Mr. R. Peel chair, before a crowded attendance, amongst whom was Mr. Montague, who has decided to withdraw his resignation. After the ordinary business of the meeting, which consisted mainly in doling out rings, of which 6,000 have already been sold, the meeting was given over to the newly-elected judges of the Leeds Club to show their talent before the members, four of them, Messrs. Peel, Hunter, Walton, and Best doing so, and the sheets varied very little in the aggregate, and there were some good birds on view. After the judging the various tours were explained, and some of the novice members openly said they had learned more that night than all the time they had been in the Fancy. Decided that next meeting night be given over to four of the novices, Messrs. Heaton, Boyd, Hallam, and Simpson, to give their ideas of the birds' tours. Also decided to hold our annual contest, Nov. 9, 10, connected with which we are adding £5 to a sweepstakes of 1s. each; birds to be nominated not later than Aug. 1, and ring number sent to Sec. not later than Oct. 1. Novices to have three song points start; the stakes to be called the Roller Breeders' Derby. Decided unanimously that we ask all clubs to take a vote on Rule 7, so as to let all new clubs give their opinion on this "drastic" rule, as it has been termed. Federation members please show their interest in the matter by recording their vote.—H. Best, Sec.

Singing Contests.

Announcements of forthcoming contests in the nature of advertisements must be paid for at advertisement rates, two words a penny.

LEEDS.

Linnet singing contest for quality, Clarence Hotel, Skinner Lane, Mar. 4. 34 birds competed for four good prizes, and some very good singing was heard. 1, H. Wigfield; 2, 3, Binns; 4, Bamfield. Judges, T. C. Summers, C. Ward; timekeeper, Rayner.—T. C. Summers, Hon. Sec.

Open contest, Glassmakers' Arms, Greyhound Place, York Road, March 4, Linnet singing, 28 birds; 1, T. Stockdale; 2, Platts; 3, G. Marshall, Wheelhouse. Also night contest, 14 birds: 1, 2, 3, G. Marshall. Judges, Messrs. Biss, Dearlove, Bomfield.—G. Marshall, Hon. Sec.

Contest, Mar. 4, Old Bird-House, Albion Hotel, Saville Green. Some excellent singing by 25 birds was heard: 1, Bott; 2, 4, Ward; 3, Parker. Canary contest, same evening: 1, Thompson; 2, Wood; 3, Sissons. Please note change of secretary, Mr. Walter Naylor retired; Mr. T. Crane has been appointed, to whom all correspondence must be sent.

Easter prize drawing on behalf of the above club will take place on April 8. For winning numbers see CAGE BIRDS, April 1.—(Advt.)

West Leeds Linnet and C.F.H. contest, Mar. 4, Prince of Wales Hotel, for Linnets, 20 birds contested: 1, H. Baldwin; 2, Jarrow; 3, C. Towes. Judges, J. Goodwill, W. Moss; timekeeper, D. Clegg. Canary contest, Mar. 4, Viaduct Hotel, 10 birds: 1, G. McNichols; 2, Conchiffe; 3, T. Sissons. Judges, W. Moss, C. Towes; timekeeper, J. Sellers. If Driver's match is for Linnets, he can be accepted if he will extend his challenge to Leeds, up to £10.—T. Cawood, Sec.

PONTEFRACT

Linnet contest, Woodman Inn, Horsefair, club sing, Mar. 4, 46 birds entered for four prizes, three minutes time singing: 1, Skidmore, 92; 2, B. Nelson; 3, W. Nelson; 4, Merrick.—S. Pugh, Sec.

SHEFFIELD.

Linnet contest, Sportsman Hotel, Paternoster Row, Mar. 4. 23 birds sang: 1, Parlett; 2, Holmshaw; 3, Woodhouse.—E. Phillipson, Sec.

The challenge published in last week's CAGE BIRDS, "any bird in Sheffield, time singing," should be "any bird, Sheffield time singing," and the offer is open to any bird in the world.

BARNSLEY.

Dove Inn Linnet Club, Doncaster Road, March 3. A match was sung between Hardman's Linnet and Jones' Mule Linnet for a stake, 10min. time, Hardman giving the Mule 1min. start. Result: Hardman, 7min. 47sec.; Jones' Mule, 5.27. Mar. 4, club sing, 18 birds, for four prizes; good average singing. Norburn, 3min. 40sec.; Jones, 3.27; France, 3.5; Wright, 3.4. Books to be straight by next week or members will not be allowed to sing at Easter big sing.—J. Hardman, Sec.

KIPPAX.

Kippax Linnet Club, Headquarters, Commercial Hotel, members' sing, Mar. 3. 31 birds entered for four minutes sing, and some good singing was heard: 1, R. Collinson; 2, H. Collinson; 3, Potter; timekeepers, J. Cooper, R. Plows; tappers, H. Collinson, J. Liversedge.—R. Plows, Sec.

I will sing Driver, of Sheffield, at Pontefract Club Headquarters, the same style as advertised in CAGE BIRDS, 1½ minutes spring, 1½ minutes bluff, five seconds a break.—R. Plows.—Advt.

ALL JUDGES AND SHOWS SHOULD USE OUR

specially prepared and up-to-date

JUDGING BOOK.

The advantage this book has over others is that it has 3 columns for awards and is therefore a great help to, and a double check for judges, while there is always a slip free to be sent to the printers of the catalogue.

Prices:—1 Copy, 6d. post free.
6 Copies 2/6 post free.
12 Copies 4/6 post free.

A sample page on application to "CAGE BIRDS," 154, Fleet Street, London, E.C.

Queries Answered

For rules see last week's issue.

CANARY QUERIES

Answered by CLAUDE ST. JOHN

SAMPLE OF RAPE.

N. W. G.—The sample of rape sent is an excellent all-round sample of summer rape for these times, though it seems rather new. This will be no serious detriment, but if you find it scours the birds use a rather smaller proportion of it. It is most suitable for feeding to any class of Canaries.

EXPECTS TOO MUCH.

Leader.—Assuming the young bird is really a cock he is not very likely to be in good breeding condition or fit for being already mated if he is always expecting the hen to feed him. Was he in good song when he was mated? And what makes you think he wants the hen to feed him? Does he merely drop his wings, stand across the perch, and gape open-beaked at the hen, perhaps making a squeaking noise meantime? If this is how he acts then it is probably his manner of courting her good opinions and not owing to be fed by her. If this is the case a little patience will probably set matters right, though it may be some little time before they set to work in earnest, as the cock is obviously not in a very forward condition. To help them along you may give the pair a teaspoonful of egg or other soft food every second day, and on alternate days a similar quantity of a mixture of equal parts hemp, niger, white millet, teazle and broken groats. It will also further help matters if you add a pinch of a mixture of equal parts maw, gold of pleasure and sesame to the soft food each time you give it. Also look out for the early sprouts of dandelion which you may find even now in warm sheltered nooks, and give four or five crisp tender leaves of this daily until they have gone to nest. As you will probably have seen by other replies, it is really too early yet to put the birds together, and in your case it would doubtless have been better to have had a little more patience before doing so. If the supposed cock really does sue to be fed, and was not in good vigorous song before it was put with the hen I should be much inclined to doubt it being a cock.

ROLLER DIET.

H. Rose.—(1) Highly trained contest singers are commonly fed chiefly on a staple diet of summer rape only, while canary and the other seeds usually fed to other breeds as a more or less prominent item in the staple are limited to the place of titbits. Any large proportion of canary seed in the dietary is believed to lower the quality of the song of these birds. For full details of feeding this class of Roller you should get our Manager to send you a copy of the nutshell booklet No. 10 on the Roller, 2½d., post free. For an ordinary class of Roller I prefer a staple diet of two parts canary to one part summer rape, with a small teaspoonful of egg food once or twice a week, according to the season or condition of the birds, and on two other days a pinch of a mixture of equal parts hemp, niger, teazle, black rape, broken groats, and just a sprinkling of linseed amongst the bulk. A little green salad should be given two or three times a week during early spring and late autumn, and daily during the summer, and in the winter a morsel of sweet fruit may be substituted, care being taken at all times not to give green food which is nipped by frost or sodden with rime or snow, or decaying portions from any other cause. (2). The above dietary would be equally suitable if you were going to breed with the birds, except that when you are preparing the birds for mating you may give the egg food every second day and a little of the seed mixture on the alternate days for two or three weeks, the length or quantity of extra feeding needed being dependent upon the condition of the birds. Birds in very vigorous condition need but little feeding up for breeding when the proper season arrives for mating, those in less robust health or out of condition require to be put on the extra feeding a week or two earlier.

SHELLING SEED.

J. Towler.—The sample of seed sent is really of excellent quality all round, and there is no fault with it. It is the hen that is troubled with a deranged digestion, and the following treatment should set matters right. Keep in a comfortably warm place, though you need not over-do the heat, give a staple diet of a mixture of three parts canary to one part summer rape, and in addition give separately every second day a piece of bread and milk the size of a hazel nut, sprinkled with soft sugar, and on the alternate days give half a teaspoonful of mixed seed and a morsel of banana, or a crisp tender tuft of dandelion, if you can find the latter. In the water every second day for a week add six drops of syrup of rhubarb and as much Epsom salts as will cover a sixpence, and after this give instead four drops each of tincture of gentian, tincture of calumba, and aromatic sulphuric acid every second day for a week or fortnight as may seem necessary. Continue the above dietary for a fortnight or three weeks.

CEASED SINGING.

A Beginner.—(1) It is not unusual for some cocks to cease singing when put with the hen, and provided they are in robust health and vigour and seem to attend to their duties satisfactorily the absence of song does not necessarily mean that they are not in good breeding condition. But in your case you mated the birds a good deal too early, and it is more than doubtful if they, or at least the cock, were in a sufficiently forward condition for mating. If things have got no further I would advise you to separate them again and feed up the cock until the last week in March, and then if the weather is propitious and the birds both appear in good condition and anxious to begin nesting you may try again, but if they do not seem very forward then do not mate for another week. In addition to the staple seed diet give the cock a morsel of bread and milk sprinkled with soft sugar, or a small teaspoonful of egg food with a pinch of a mixture of equal parts maw, gold of pleasure and sesame seed mixed in it every second day, and on the alternate days give half a teaspoonful of a mixture of equal parts hemp, niger, white millet, teazle, and broken groats. Also try to find three or four tender young leaves of dandelion to give him daily. It should not be very difficult to find this herb now in warm sheltered corners. During the first ten days give the hen a pinch of niger seed every second day, and a little egg food with the seeds the same as the cock twice only, and after this time treat both birds alike until ready to mate. (2) You would get only buff youngsters from two buff birds ticked, marked, variegated, or grizzled more or less, both in extent and proportion, according to the amount of green blood in the parents, of which you give me no idea. I note you say one bird is yellower than the other, so possibly they are a pale yellow and a buff, in which case you might expect to breed both yellow and buff young with the same conditions as to markings. In a buff you will find that the yellow colour stops a little short of the extreme tip of the feather, which is white, giving the bird a mealy or frosted appearance, whereas in a yellow the colour, whether pale or warm, goes right to the tip of the feather, giving a solid appearance to the colour. (3) Your Mule query should have been written on a separate sheet. See Mr. Norman's column next week for reply, as your question will have to be forwarded to him.

SWOLLEN JOINT.

W. T. H., Dowlais.—You cannot do better than continue carefully to carry out the advice previously given as to keeping the bird as quiet and restful as possible until the effect of the swollen joint has passed off and the bird commences to move about of its own accord quite freely. From the further particulars you now give I anticipate the joint may not fully recover its normal condition, but there should be a considerable improvement, and you can do nothing better than leave the remedy wholly in Nature's hands now, beyond seeing that it has every inducement to keep quiet and at rest for the time being. It may enable it to perch better if you supplied rather wide perches with flat upper surfaces, but see that there are no sharp edges where the flat top meets the curved under surface.

FLYING ABOUT CAGE.

Rollers.—The sudden attacks you describe are in all probability due to slight attacks of epilepsy. You might first of all see if you can find any outside cause for its alarm when these attacks come on, such as any strange animal, cat, or dog, or any startling article of dress, etc., and if so remove these causes, or at least try to prevent their recurrence. Then try the effect of the following treatment for a month or so. Keep in a fairly comfortable temperature, but do not over-heat it, and give as a staple diet a mixture of two parts canary to one part summer rape. In addition to this give separately every second day for two or three weeks, a piece of bread the size of a hazel nut, soaked in cold milk, drained, two drops of cod liver oil emulsion on it and sprinkled with maw seed. On the alternate days give half a teaspoonful of a mixture of equal parts hemp, niger, white millet, teazle, broken groats, and just a sprinkling of linseed among the bulk. On these days give also a morsel of banana or boiled carrot, or a spray of watercress or two crisp young leaves of dandelion, which you may now discover in warm sheltered nooks, the latter will be the best thing you can give in way of green food. In the drinking water add six drops of syrup of rhubarb and a crystal of sulphate of soda the size of a small pea every second day for a week, and after this give instead a crystal of sulphate of soda as above and as much bromide of potassium as will cover a three-penny-piece every second day for a fortnight. As you are feeding rather high it would benefit your stock to give an aperient at this season by adding twelve drops of syrup of buckthorn in the water all round for two consecutive days.

FOR ECONOMY'S SAKE.

Novice, B'ham.—(1) You wish to know if Pigeon eggs will answer the purpose of Fowl food in the making of egg food for feeding young Canaries, doubtless with a view to economising on the egg bill. Where the eggs of common Pigeons, or any similar eggs, are available this is an excellent form of economy, and I can vouch from personal experience that the results are all that could be desired. (2) No, it is not necessary, nor even advisable, to soak the canary seed which forms the staple diet when young are being reared.

THE MAIDEN SONG.

D. M. A.—There is no definite age at which a young Roller cock should commence to sing without fail, but you have certainly been wrongly informed that such a bird is not old enough to sing at seven months old. At this age any Roller cock worth his salt as a songster should be in his fullest song, though she may improve in technicalities, which are not usually considered in ordinary songsters, after this age. Young Roller cocks of a good free singing strain, or that are likely to come out as very free singers themselves, will very frequently be seen trying over their vocal powers almost as soon as they leave the nest, and by the time they are through the first moult will be in quite good song, and the great majority of these birds will be in what may be termed full song by the middle of the January following their hatching. I should be inclined to consider a Roller bred last season that has done nothing more than a twitter up to this time as a hen, though there is just a possibility of such a bird being a cock.

A VIOLENT WOOER.

M. Dodman.—The new change in the climatic conditions will doubtless have convinced you before this can reach you that you took rather a big risk when you mated the birds so early. Another fortnight's patience would have been of the greatest value as you may find later. The apparent violence of the cock when allowed access to the hen is of no serious import; rather the reverse, as it is an indication that he is in a high degree of vigour and breeding condition, and this apparent violence is nothing more or less than his manner of vigorous courtship. It is not at all unusual for cocks in high condition to behave in this way when first mated, but they usually cool down by the time the hen goes to nest. If he does not do so, and continues his displays after the hen has commenced to sit you should take him away and cage him separately, leaving the hen to hatch out and rear the young by herself, which she will do better without such a violent consort than with him. As they commenced the business of domestic cares to all appearance so promptly it would probably be too late to separate them now until a more seasonable time, so you can only let matters take their course and trust to luck. Glad to hear the previous treatment for the bird was so successful.

BRITISH BIRDS, MULES AND HYBRID

Answered by H. NORMAN

BREEDING IN SMALL FLIGHT.

Frost Bound.—Your five feet flight is scarcely large enough for a couple of pairs of British birds with a view to getting them to nest. It is large enough for the four birds simply as pets, but if your desire is to try and breed, then you had better give the place up to a single pair. Greenfinches are the most likely to breed, but of course these are rather common, so why not put in a couple of Goldfinches if you have them; they will be far more interesting, and if you get some young ones they would be valuable. You will have to feed them fairly well, with plenty of dandelion and other wild food. Place a bundle of furze, heather, or birch branches in one end with plenty of moss, hair, etc., for building purposes, this need not be done until some time in April.

BEST SINGING MULES.

J. W. Fleming.—The question of the best singing Mules is rather a matter of taste. The singers they are trained under influence their song. Both the Goldfinch and the Linnet are good performers, although somewhat noisy. Greenfinch Mules are quieter, some of them being quite melodious, although lacking in variety. (2) You would gain nothing by mixing your colour-feed before baking the cake; it is much better to add it to the soft food as required, commencing first with a small quantity and gradually increasing to full strength, and also leaving it off gradually when the birds are finishing. (3) I am afraid you will find your 6ft. flight rather too crowded with the eight birds in it. You would do better with one cock and three hens; your other Canary hens you could use with your spare cock bird and the Goldfinch, keeping them, of course, in separate cages. All your hens could have a first nest with cock Canaries, running the Goldie in for the second one.

SEED SAMPLE.

Midlands.—Your sample of wild seed submitted is not a particularly good one, the bulk of it is charlock, a little sow thistle, chickweed, and burdock. It is not at all suitable for a staple food for any of the Finches; the Linnets would eat more of it than either the Goldfinch or Bullfinch. I would advise you to sift it well before using, and then give a spoonful at a time, and let the birds take what they require and throw the remainder away. I have had no experience of burning an acetylene lamp in a bird-room, but I have not known any injurious effect from a paraffin lamp when kept perfectly clean, and with a little ventilation at the top of the room. If you decide to try yours, see that the room is properly ventilated, as this, in my opinion, is very important.

SAMPLES OF SEEDS.

Six Seeds.—I am sorry to hear of your loss. I have carefully examined your samples of seeds, and I must say they are exceptionally good ones. Your No. 1 wild seed contains a fair percentage of husks and waste matter, but I can detect nothing in either this or your No. 2 that would be at all likely to injure the most delicate birds. The canary seed is nice and bold, and I would advise you to secure some while you have the opportunity. The summer rape is particularly sweet, and one of the best samples I have seen for some time.

FOREIGN BIRDS.

Answered by WESLEY T. PAGE, F.Z.S.

IDENTIFICATION OF PARROT.

F. Best.—Your bird is an Amazon Parrot, either a Blue-front or Le Vaillant's. I think the former, but I cannot be definite until the plumage is perfect. Keep the bird as warm as possible, yet in some well-ventilated position free from draught. Lightly dust its daily supply of boiled maize with flowers of sulphur. Add to your dietary ripe fruit, as much daily as it will eat. Also give it a few nuts (walnuts, pea, and Barcelona nuts are all good). Do not give table scraps or any kind of tea, coffee, or milk sops, or any kind of animal food. Put one teaspoonful of fluid magnesia into the drinking water daily, and twice a week half that quantity of chemical food. Persevere with the above treatment and report progress in about a couple of months. If it does not bathe, spray with a fine sprayer. Use a solution of tepid water very slightly coloured with Condy's Fluid for the purpose. Grit and cuttlebone should continually be in the cage, also a chunk of wood for it to exercise its mandibles upon.

GREY PARROT WITH SWOLLEN EYE.

Dalesman.—I am strongly of the opinion that you should consult a local vet. about your bird. A slight operation might give immediate relief. Continue the honey and borax, even if you have to put a little on its tongue daily. Also give a teaspoonful of fluid magnesia in the drinking water as often as you can without setting up chronic diarrhœa. Also give cod liver oil emulsion lightly spread on bread, biscuit or cake. Keep it in the warmest quarters you can that are not stuffy. A sore such as you describe should be personally examined, and I think a vet. could give some immediate relief and prescribe and treat it more effectively than can be done by correspondence. Should be greatly interested to hear how the bird progresses.

ZEBRA FINCHES NOT BREEDING.

W. H. Millard.—They are young birds and the weather has been all against successful nesting. I should say she would settle down all right with later nests, but if she breaks her next clutch I should advise you to procure another hen and get rid of the present one. You state that they are last year's birds, and it is quite possible that they are brother and sister. If such be the case you certainly should not attempt to breed from them, but make an exchange with someone as soon as you can. If you purchase another hen, do not get it from the same source as the present pair. Their cage should be kept in some well-ventilated position, yet where they will be free from draught and will not be continuously disturbed by movements in the vicinity of their cage. Many Zebra Finches have been bred in cages, but much more numerously in aviaries.

WHAT PARROT?

E. Peircey.—Your bird is a Ring-necked Parrakeet, a species not noted as talkers, yet I have seen quite a few which were really talented talkers, and unless yours is an old bird, there should be every prospect of it talking; at any rate, to some extent if you perserve in training it. The first thing is to get the bird steady and accustomed to you. Be very steady and quiet when attending to it. As soon as it is steady, keep it where it can hear conversation going on around it, and also when you are attending to it or giving it some tit-bit, talk quietly to it and present the tit-bit with some such remark as "Something nice for Polly." Also when it is in restful mood, teach it any word or short sentence you wish it to say. The response will come probably when you least expect, and then it will progress. Diet: Seed mixture, three parts each, by measure, canary and white millet, and one part each oats, hemp, sunflower, and shelled peanuts, ripe fruit, biscuit, dry crusts and plain cake. Grit and cuttlebone must always be in the cage, also a chunk of wood for it to exercise its mandibles upon. Water to be kept in the cage.

WHAT PARROT?

W. H. P.—It is one of the Indian Ring-necked Parrakeets, known here as the Alexandrine Parrakeet. I have known very many of this species, some of which talked quite well, and some not at all. For training see reply to "E. Piercey" in this issue. You can only tame it by dealing gently and quietly with it, avoiding any rushing movements when in its vicinity. Unless it is an old sullen bird it should pick up words and sayings it hears spoken and similarly mimic cries and calls. All Parrots should bathe, but some will not do so in captivity. Those that will not should be sprayed (use a "mist" sprayer) with tepid water two or three times a week in summer, and once a week. Do not give any tea, coffee, or milk sops, table scraps, or any kind of animal food.

BUDGERIGAR WITH SWOLLEN LEGS.

A. M. Wrightson.—I alluded to several probable causes in my previous reply. I am of opinion that it was a case of paralysis with your bird, especially as I now learn that it had wing exercise by being allowed to fly loose in the room; but only a post-mortem examination could have definitely decided the point. With the exercise you give your birds they should intimately breed, but fix the cocoanut up in the cage with the opening towards the light, and if the birds are allowed a daily fly round the room they should breed when quite fit. Diet: Seed mixture two parts each, by measure, canary and white millet seeds, and one part white oats (whole or crushed, which they prefer); well mix and keep continuous supply in cage. A little sweet apple or frame lettuce as green food in winter, but when in season supply ad lib the flowering seeding heads of any kind of grass. When they have young to feed, supply millet sprays and keep a tin of broken biscuit in their cage. You would find the Nutshell "Budgerigars," from my pen (2d., post free from our Manager) very useful to keep by you.

BREEDING RED-HEADED FINCHES IN CAGES.

S.W.B.—A full-sized Crystal Palace type cage ought to be large enough for the birds. Fit it up as suggested in my last, putting in a nest receptacle, and when the hen is in good plumage again, then supply nesting material (hay, long grass and a little moss) at once, and leave them to themselves. As regards nest receptacle, make a box about six inches square, with the top hinged for cleaning, etc., after brood has flown. For entrance, cut a hole (elliptical) 1½ x 1½ inches near the top. Hang the box up near to the top of highest portion of cage, and put a screen of some kind over that portion of cage top, and ultimately you should have some young Red-headed Finches. When feeding young they are the better for some kind of live food, such as gentles, live ants' cocoons, smooth caterpillars, flies, earwigs, spiders, etc.; also a little soft food.

WHAT PARROT?

A. J. Lye.—It is an Indian Ring-necked Parrakeet. Some individuals are good talkers, while very many talk not at all or but little. I have given details as to training, feeding, etc., to two other correspondents in this issue, and to this I must refer you. Do not give any tea, coffee, or milk sops, table scraps, or any kind of animal food. Keep it free from draught yet where it will get light and air. Feed as directed and keep continuous supplies of Parrot grit and cuttlebone in the cage. Also a chunk of wood for it to exercise its mandibles upon, and it should do well with you.

PARROT WITH SWELLING.

E. W.—Give it one teaspoonful of fluid magnesia in its drinking water every fourth day, and on the intermediate days lightly colour the water with chemical food. As regards the bath, during the remainder of the winter only give this on a genial day. Omit it altogether during severe sharp spells. Discontinue the milk pudding, as it will be far better without this. All the other items you give are wholesome, but you make no mention of seed mixture. Keep a supply of the following continually in the cage: Canary, white millet, white oats, hemp and sunflower seed in equal parts, by measure; well mix together. Keep Parrot grit and cuttlebone continually in the cage, also a chunk of wood for it to exercise its mandibles upon. As regards the swelling, paint it every other day with tincture of iodine so long as the skin remains unbroken. Be careful not to get any of the tincture in its eye. I also advise giving it a little honey and borax, lightly spread on cake or biscuit, daily, so long as an ordinary small box lasts. This bird would be best kept in the warmest (not stuffy) position you could give it for the next two months.

POST MORTEMS.

Mr. G. Yates, M.R.C.V.S., 1, College Road, Harrow, Middlesex, will examine and report upon dead cage birds for a fee of 1s. 6d. each bird; for reply direct, 2s. 6d.; analysis, 2/6. The Post Office regulation is that bodies of birds must be sent at the letter rate of postage, and must be packed in hermetically-sealed receptacles which must themselves be enclosed in strong wooden, leather, or metal cases. If this regulation be infringed the packets may be destroyed by the authorities. **Any bodies sent to the office of this paper will be thrown away, and if a fee is enclosed the loss will be the sender's.**

Novice.—Inflammation of the bowels, accompanied with splenic apoplexy. An indication of food poisoning. There is evidently some discrepancy in the feeding to account for your losses.

GENERAL.

WILD BIRDS AND BERRIES.

J. D. Griffiths.—All the seeds and berries you name, and very many others, are described and their uses given in the book about which you enquire, "Seeds, Foods, and Wild Plants for Cage Birds." Our manager would send you a copy, post free, for 1/2.

JOINING A CAGE BIRD SOCIETY.

W. Henthorn.—There is a society in your own town, St. Helens, the secretary of which, Mr. J. Hesketh, 29, Kirkland St., would be pleased to give you all particulars as to membership, subscription, etc. It is not necessary for you to be an experienced bird-keeper before you join a society; novices are always welcome, and would learn much by attendance at the meetings and in conversation with fellow members of greater experience. There can be no doubt that your Chaffinch is a cock bird; the hen is very much duller in colour than the cock and would not answer to the description you give.

SUFFERING WOMEN

To prove the superiority of Zedex, prepared in dainty, tasteless tablets) over all other remedies, will send a

1/3 BOTTLE FREE.

together with interesting book full of information on Zedex, and explanatory treatise by Dr. Andrew Wilson. Send three stamps to cover carriage and packing. Obtainable from all Boots' Branches at 5/- per package. Advice Free.—MANAGERESS, ZEDEX CO., Hove, Sussex. Mention paper.

A POST CARD ONLY You cannot hold your own in life's battle if weak, worn, or easily jaded. Periodical attacks of moodiness, langnor, despondency, depression, and groundless fears mean nerve troubles and lead to brain fag, impaired memory, and unfits one for study, business or pleasnre. The chosen ones in every walk of life are the alert, the bright, and the intelligent, nature's natural gift, but marred for lack of a little knowledge. A post card to the Useful Knowledge Publishers, P.6. Box 94, Bradford, will put you in possession of a 48-page book, neatly bound, of valuable information, and will be sent post paid free of any charge whatsoever if you will mention CAGE BIRDS. A little knowledge saves much medicine. [Copyright.

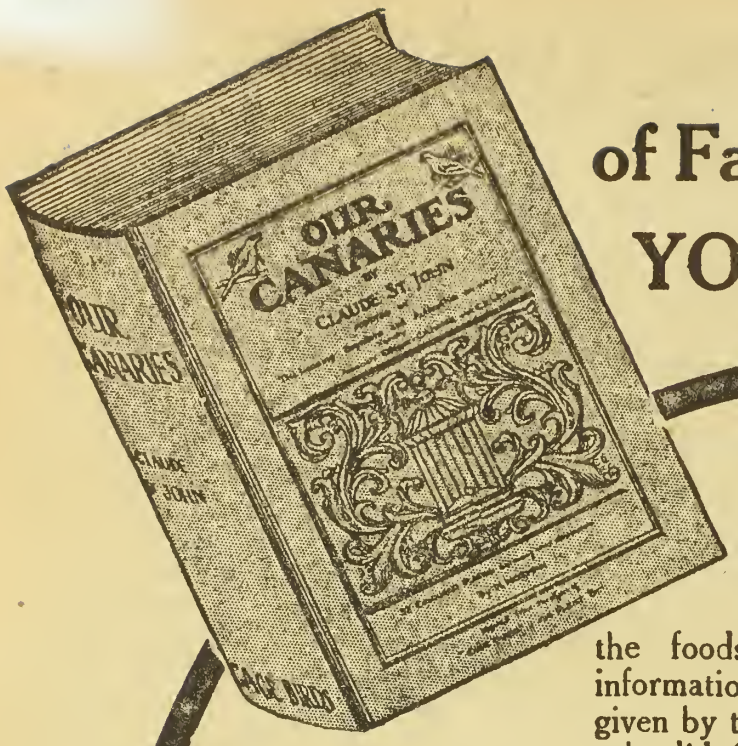
SECRETS
of Famous Canary Breeders
YOURS for only 1/- down



Judging the position of a bird by the clock.

HOW well-known Canary Fanciers bred their prize-winning birds—birds literally worth their weight in gold—how they trained them—the foods used. All this priceless information and much more is clearly given by the Breeders themselves in this splendid Canary Book. Every page—every line—is full of the *practical experience* of practical men—experts in their line. Fanciers who have specialised in Lizards give valuable information. Breeders of famous prize-winning crested varieties contribute to its 380 pages. Every feature of Canary Breeding and Exhibiting is clearly and fully dealt with—you have only to glance at the comprehensive index to turn up the information you desire.

The book contains 133 illustrations, a few of which are here reproduced. Thus, "Our Canaries" not only *tells* you but *shows* you. If you are a novice, or breed only for pleasure, you will be delighted with the increased enjoyment which the book will enable you to derive from your hobby. If you are an "old hand," or breed for profit, it will help you to *increase* profits.

"Our Canaries" will be sent you for Free Examination—Approval for a deposit of only 1/-. If, after examination, you return the book, your deposit will at once be refunded. If, however, you decide to keep the book, you can pay the balance by easy monthly instalments. Thus you have everything to gain and nothing to lose by sending for a copy. Do so TO-DAY

WEST COUNTRY YORKSHIRE CANARIES.

The two fine Yorkshire Canaries here shown are the property of a West Country Fancier, Mr. W. A. Clift of Saltash, late of Cardiff. The ticked yellow on the left has won 1st Prize at Plymouth Show, and seconds at Hayle and Bristol. The other is the clear yellow which took 1st Prize and special at Plymouth, 3rd at Hayle, and 2nd at Pontypool in the unflighted class.

F. CARL, Publisher, 154, Fleet Street, London, E.C., 4.

Advertisement Charges.

One Halfpenny for each word up to 48, 1d. per word afterwards. Name and address to be reckoned. Minimum, 12 words 6d.

IMPORTANT NOTE.—Two or more Advertisements coming from the same advertiser, even if sent in different names, are reckoned together, and are charged at two words a penny up to 48 words; after that 1d. per word. No single advertisement, even if accompanied by others, will be charged at less than the minimum price, viz., Sixpence.

Headlines or Footlines, 9d. 1/-, 1/6, 2/-, 2/6, according to size.

The rate for displayed advertisements is 7/6 per inch. Rates for a series on application.

ADVERTISEMENTS UNACCOMPANIED BY CORRECT REMITTANCE WILL NOT BE INSERTED.

Postal Orders must be sent as far as possible. All moneys should be made payable to F. CARL.

The Proprietor reserves the right to refuse any advertisement, or to cancel any advertisement ordered for a series, at any time, without assigning any reason for so doing.

Advertisements must in all cases bear the bona-fide name and address of the advertiser, and no advertisement will be inserted if addressed to a receiving office, or similar place of call.

Advertisements close Tuesdays first post in each week, and should be sent to the Advertisement Manager, CAGE BIRDS, 154, Fleet Street, London. Terms for Display Advertisements on application.

ALWAYS USE "CAGE BIRDS"

DEPOSIT SYSTEM.

We are not responsible for the statements made in advertisements, nor of the *bona-fides* of either buyers or sellers In all transactions the adoption of our Deposit System should be insisted upon

RULES.

1.—PROCEDURE.—The intending purchaser should send to this office the amount of the purchase (our deposit fee included), and at the same time he should communicate with the seller stating what it is he requires sent on approval. We acknowledge receipt of the deposit to both parties. In all cases the depositor should give his name and address, and also that of the vendor, and must write same clearly and distinctly.

2.—END OF TRANSACTION.—The deposit is retained by us until we hear from both parties that the transaction has been completed. If a sale has been effected, we hand the amount deposited to the seller. If a sale has not been effected, we return the amount to the depositor. The transaction must be conducted by the parties themselves. We merely hold the deposit.

3.—AMOUNT OF COMMISSION.—The fee is 6d. for each £1, or fraction of £1, and it must be sent at same time as the deposit.

4.—IMPORTANT POINTS.—The depositor must decide within forty-eight hours of the receipt of the goods whether he will keep or return the same, unless, that is, some other period of approval (of which we must be advised) is agreed upon by both parties. The depositor must at the same time notify us of the fact that he has returned the goods. If the goods are not returned within the said forty-eight hours, we reserve the right to send the deposit to the seller after the expiration of that period. And should the seller fail within three days to notify us of the receipt of his goods back again, the transaction will be treated as ended, and the deposit will be returned to the depositor.

5.—A SATISFACTORY PURCHASE.—When a transaction has been completed to the satisfaction of both depositor and seller, both parties must at once return the deposit receipts as a guarantee of its completion. The depositor must at the same time instruct us to pay over the deposit to the seller.

6.—GOODS ALREADY SOLD.—If the goods are sold before our deposit note reaches the seller, or if for any other reason he declines to do business, he must at once return the deposit note to us. Failing its receipt, we reserve the right to return the deposit to the sender after the expiration of three days.

7.—FRESH TRANSACTION.—In case no sale be effected, a deposit is available for purposes of a fresh transaction, provided another deposit fee be paid.

8.—GOODS IN TRANSIT.—Goods in transit are at the seller's risk, and any damage or loss sustained on the journey must be borne by the seller. But goods not approved of must be properly packed and returned by the same means as were used in sending the same.

9.—PAYMENT OF CARRIAGE.—The payment of carriage must be a matter for arrangement between the vendor and depositor. We do not undertake to settle disputes affecting questions of carriage. But in the absence of other arrangements the purchaser is liable for the carriage of the goods, and if the goods are sent on approval and returned, each party pays the carriage one way.

10.—DISPUTES.—In case of a dispute, the decision of the Editor is final.

IMPORTANT.

SEND THE FULL COMMISSION.—If the full commission does not accompany the deposit, the vendor will not be notified of its receipt until the amount deficient plus the extra postage incurred has been paid to us.

HOW TO REMIT.—Under no circumstances will Cheques or Post-dated Money Orders be accepted as deposits. Uncrossed Postal Orders must be sent and the numbers taken for safety.

Not Singing

If you have any birds you are relying upon for the breeding season that have gone into Soft Moult, we Guarantee you a perfect cure.

DITCHFIELD'S TONIC DROPS

are a certain cure for loss of voice, soft moult, slow moult, going light, feather plucking, and inflammation of the bowels.

DITCHFIELD'S FAMOUS REVIVO

is absolutely unequalled for giving new life and vigour to the birds, and for producing that smart tight appearance of the plumage so much desired by all fanciers.

These two Medicines, given on alternate days, will bring any bird into breeding condition.

DITCHFIELD'S SPECIAL LUNG TONIC

the grandest medicines ever introduced for chest and lung affections in cage birds. Can be given with absolute confidence to the most weak or delicate birds. All medicines can be given in the drinking water, and the birds take them freely, with marvellous results.

All the above remedies are sold in 8d., 1/2, and 2/2 bottles; two 8d. bottles for 1/2, two 1/2 bottles for 1/11, or three for 2/8. P.S.—The 1/2 bottles are treble the 8d. size. All orders sent per return, post free.

FRANK DITCHFIELD, BIRD SPECIALIST, OLDHAM

NOTICE TO BIRD PURCHASERS.

It is advisable that all newly-purchased birds, especially foreign birds, be kept isolated from established stock for a week or ten days, until by their condition they establish the fact that they are thoroughly healthy.

KNOWLEDGE IS POWER.
You can get it in 6d. Vols.

READERS of "Cage Birds" can to-day secure at pre-war prices volumes of the well-known **"Everybody's" Series.** Each volume is, on its particular subject, the handiest and best book obtainable. Although small enough to fit one's pocket, each book is packed with a vast amount of valuable information. Consider the wonderful price—only **6d.** each (8d. post free), strongly bound in cloth; in attractive leather binding, **1s.** each (1/2d. post free). The number of these books is very limited, and owing to the enormous increase in the cost of printing and paper, it will be impossible to reprint them at present prices. There are sure to be some of these books that YOU need—some that will give you just the information you have been seeking on some knotty point. Send in your order **NOW.** It is only necessary to state the *Number* of each book as given opposite the name in the list shown here.

1. Everybody's Guide to Poultry-keeping.
2. Everybody's Guide to Carpentry and the Doing-up of the House.
3. Everybody's Home Dressmaker. (7d. only.)

Champion YORKSHIRES & NORWICH Bulldog Strain.

NOW IS THE TIME TO PROCURE YOUR BREEDING STOCK, to ensure getting **the best birds,** and to get them settled in their new home before pairing up. I have an enormous stock of all varieties on hand, and, having almost finished my export trade for this season, I can now concentrate my attention to the requirements of the home trade. My long experience as a breeder and exhibitor, and the large stock of birds I have to select from place me in a position to send you just such a bird or birds as you require. As regards the quality of my stock, it is surely sufficient to refer you to the reports of all the leading shows, from which you will find that both my **Yorkshires** and **Norwich** are not only maintaining but adding to, their great reputation. In addition to this, I have sold several birds that have won leading honours at all the principal shows. Kindly write, stating wants. I am now offering a limited number of grand stock and exhibition birds, either Yorkshires or Norwich, which I can guarantee as bred from my own **Bulldog Strain,** at 20/-, 25/-, 30/-, 40/-, 50/- each, cocks or hens. Also a few grand matched pairs at 40/-, 45/-, 50/-, 60/- per pair upwards. These are splendid value, and have only to be seen to be appreciated.

I have also a grand selection of stock birds from other well-known strains, as follows:—

YORKSHIRE COCKS, grand lengthy birds, in full song, 15/-, 17/6, 20/-, 25/-, 30/- each, upwards.
YORKSHIRE HENS, smart, racy, typical hens, 7/6, 10/-, 12/6, 15/-, 20/- each, upwards.
MATCHED PAIRS, 25/-, 30/-, 40/-, 50/-, 60/- per pair upwards.
NORWICH PLAINHEADS. Grand, thickset, cobby birds at same prices as Yorkshires.
BORDER FANCIES, Real good birds, both for stock and exhibition. **Cocks,** 15/, 20/-, 25/-, 30/- each. **Hens,** 7/6, 8/6, 10/- each. **Matched Pairs,** 17/6, 20/-, 25/-, 30/-, 40/- per pair.
CRESTS AND CREST-BREDS.—A few real good pairs at 30/-, 40/-, 60/-, 60/- per pair. Odd birds, Cocks or Hens at proportionate prices. **Matched Pairs** for **Mule** or **Hybrid Breeding,** 15/- pair.

ROLLERS. ROLLERS. ROLLERS.

I have a magnificent collection of pure British Rollers from the best and purest strains, at following prices:—

HIGHLY TRAINED COCKS, 25/-, 30/-, 40/- each.
PURE-BRED HENS, 7/6, 8/6, 10/- each.
MATCHED FAIRS, 25/-, 30/-, 35/-, 40/-, 50/- per pair.
Travelling Cages, **4d.** extra in all cases.

One word more—**Please remember, I invite you** to come on any day but Sunday, and make your own selection, but if you cannot come, **Don't Forget** that I send every bird on 7 days' approval, at my sole risk. I personally select every bird that is sent away. I have over 4,000 (four thousand) birds in my rooms at the present time to select from, and I guarantee to give absolute satisfaction to every customer or return cash in full. Terms: Cash or deposit with Editor.

Send for 1917 Price List.

20 lovely Yorkshire cocks, 17/6, 21/6, 25/6, 30/6; racy hens, 7/6, 10/6, 12/6, 15/6, 20/6; correctly matched pairs, 21/6, 25/6, 30/6, 40/6; worth double; approval: R. Hanford, Derby. (867)

FOR immediate disposal, my last 12 pairs of Yorkshires; many are big winners and have bred winners, price from 20/- to £4 a pair; genuine bargains: L. Yates, 135, Maybury-rd., Woking. (867)

YORKSHIRES and Norwich; I have a grand lot to dispose of; can be seen any time or sent on approval; cocks, 15/-, 20/-, 25/-, 30/-; hens, 10/-, 15/-, 20/-, 25/-, 30/-: E. Cheshire, 34, Crawford-st., Bradford.

EXCHANGE only: 2 H.M. Linnets and hen Canaries and two grand Goldfinches and hen Canaries, for first class Yorkshires; new blood wanted; approval both ways: Mathews, 74, Greenway-avenue, Taunton.

HIGH-CLASS, reliable Yorkshire hens, clear and yellow, and buff, cinnamon (1915), 12/6 each; lengthy good position, and healthy; approval, receipt cash, or "Cage Birds" deposit: Chef, Noon's Hotel, W.C.1

IF you want a few good Yorksbire cocks I have 5 good ones for sale, from 15/- to £2 10s., yellows and buffs; seen any night except Wednesday: W. D. Hall, 124, Sancroft-st., Kennington Cross, London. (855)

WANTED, pair of good stock birds; will give very large yellow cock, 1915, cup winner, not better living, slightly blind in eye, also cash, £3; value £6; approval both ways: Peter Thompson, 7½, Kirk-st., Peterhead. (864)

GRAND unflighted clear buff cock, can win, and over 7 inches long, with lovely yellow hen to match, 25/- the pair, worth double; six days' approval: Edwin North, Breeder, 443, Manchester-rd., Bradford. (872)

CHAMPION Yorkshire for sale, the same strain as the winners of the two cups at Llanelly, Swansea and other shows, yellow, buff, variegated cocks, from 12/6 upwards: Owen, 20, Bryn Terrs, Sea Side, Llanelly, Carm. (867)

GRAND cinnamon marked buff stock cock, 1916 bred, with lovely hen to match, sure to breed winners; price 25/- the pair, worth double; approval six days: Edwin North, Breeder, 443, Manchester-rd., Bradford. (872)

CLEAR yellow Yorkshire cock, good colour and over 7 inches long, grand stock bird, with lovely hen to match, sure to breed winners, 30/- the pair, worth double: Edwin North, Breeder, 443, Manchester-rd., Bradford. (845)

MR. INNES, Estate Factor, Largs, offers clear yellow, clear buff, marked buff cocks. These three birds are quite exceptional and fit to win in keenest competition; large, with perfect feather; £3, £2, £2; or exchange poultry. (864)

BARGAINS in Yorkshires: A few good pairs at reasonable prices; also buff cocks and hens; good size and typical birds; guaranteed healthy; seen any time: H. Smith, Breeder and Exhibitor, Almora, 81, Merton-rd., Wimbledon. (869)

CHITTENDEN'S Yorkshires.—30 pairs all for sale; call and see them; cocks from 12/-, hens 10/- upwards; splendid buff cock and yellow hen, 30/-; yellow cock and buff hen, 35/-; have a pair on approval and see for yourself the value I give: 53, Carlisle-street, Manningham. (858)

I HAVE still some very good pairs to part with, yet all large birds; also some odd cocks, yellows, clear and variegated, also some buff variegated cocks; they are all the best of Norwich, ready for breeding, on approval; stamp reply: William Hampton, 25, Damacre-rd., Brechin. (865)

LONG, leggy unflighted clear yellow Yorkshire cock, £2; two clear buff hens 7/6 each; we have won many of the highest awards at Palace with birds, our own breeding, this last ten years; approval, cash or deposit: Ernest Radley, c/o Walter Radley, Paradise-square, Skelmanthorpe, near Huddersfield. (871)

YORKSHIRE Canaries. 2/2, by H. W. Battye (Past President of the Yorkshire Union); absolutely the best handbook dealing with the Yorkshire and its sub-varieties. Contains complete instruction upon pairing, breeding, moulting, and successful exhibiting; also how to treat in both health and disease: CAGE BIRDS, 154, Fleet-st., London, E.C.

G. SNEAD

breeder of the finest up-to-date Yorkshires living, for proof, winner of the greatest trophy of the season, the Sheffield Rose Bowl for best unflighted bird bred by exhibitor, 1916; the same blood as his noted Palace and National winners; having selected my breeding stock, I have some grand birds for sale, related to the above, at reasonable prices: approval, cash or deposit: Address, 133, Arncliffe-terrace, Horton Grange-rd., Bradford. (830)

CHAMPION YORKSHIRES

I can offer you the best value in Yorkshires it is possible to procure in this city or elsewhere at very much lower prices for what they are worth on the perch, besides being bred or very near related to some of the biggest winners in the Fancy. I offer some exceptionally well matched pairs at 20/-, 22/6, 25/-, 30/-, 40/-, 50/- a pair; odd cocks from 12/6, hens from 7/6; all cold room bred, and cocks over 7 inches long, and full song; terms, 6 days' approval, cash or deposit; testimonials arriving every post, so send at once to avoid being disappointed, as my stock is limited: Edwin North, Breeder, 443, Manchester-rd., Bradford. (845)

IF YOU £20 WILL CALL

at my office any time during business hours and ask to see the original letters of the unsolicited testimonials here given, and I fail to produce same, with huge quantities of others, the above amount will be paid for your trouble. Note the dates, please.

"CERTAINLY ADVISE, ETC."

Upper Thomas Street, London, March 7, 1917.—I am greatly pleased with pair of Norwich. I will certainly advise anyone to send to you for birds.—T. Williams.

Norwich Plainheads.

You cannot purchase better blood than I now hold, and I am certain you cannot procure the same value. Cocks, 12/6, 15/-, 20/-, 30/-, 40/-, 50/-. Hens, 5/6, 6/6, 7/6, 10/6 upwards. Pairs, 17/6, 20/-, 25/-, 30/-, 40/-, 60/-. These are the best value in Great Britain to-day, and containing many of the best combined strains in Great Britain.

"STRAIGHTFORWARD WAY."

Hedley Street, S. Shields, March 6, 1917.—Birds arrived safe. I am highly satisfied. Best thanks for straightforward way you have dealt with me.—R. Honeyman.

Crested and Crest-bred.

Cocks, 15/6, 20/- up. Crestbred Cocks, 12/6, 15/-; pairs, correctly matched for breeding, 21/-, 25/-, 30/- up.

"EVIDENTLY A WIZARD."

(I hope not.—W.R.)

Bridge of Allan, Scotland, March 9, 1917.—About a fortnight ago I got from you some Tonic Drops and Asthmarine, for a Canary which has been losing feathers for a year or more, and was a most miserable looking bird. Now his plumage is fast coming right, and he improves daily. You are evidently a wizard!—E. G. Stevenson.

Yorkshires.

The value is great; have on approval and prove this fact. Cocks, 15/-, 20/-, 30/-, 40/-, 50/-. Hens, 6/6, 7/6, 8/6, 10/6, 15/-, 20/- upwards. Pairs, 21/-, 25/-, 30/-, 40/-, 60/-. I have a very fine collection of these.

"PROMPT DELIVERY, ETC."

Birds arrived in good condition. Quite satisfied. Thank you for prompt delivery and straightforwardness.—T. Lewis.

Norwich Cinnamons.

Cocks, 12/6, 15/-, 20/-. Hens, 10/6, 15/-, 20/-. Pairs, 22/6, 25/-, 30/-, 40/-.

"YOUR STATEMENT IN 'CAGE BIRDS' IS PERFECTLY RIGHT."

Ebbw Vale, March 8, 1917.—Thanks for yours today. Your statement in "Cage Birds" is perfectly true. I am satisfied.—A. Powell.

Lizards.

Cocks, 12/6, 15/-, 20/-. Pairs, 21/-, 25/-, 30/-.

"MORE THAN SATISFIED."

St. Agnes, Cornwall, March 9, 1917.—Bird to hand in splendid condition. Am more than satisfied. Thanks much for prompt attention. Shall place further orders with you.—W. T. Certis.

Goldfinch, Linnet and Twite Mules.

Light and Dark Goldfinch Mules, others all dark, undoubtedly by far the largest collection in England. Also white-legged breeding Goldfinches. List or particulars on application.

"SPEEDY TRANSACTION OF ORDER."

Kirkcaldy, March 9, 1917.—Birds arrived safely. Am highly pleased with same, and must thank you for your prompt and speedy transaction of my order.—J. F. Kelly.

Greens! Greens!!

Norwich, Yorkshires, Borders, Crests, and Crestbreds. Particulars or list free.

"MORE THAN VALUE."

Received bird in excellent condition. Thanks for prompt attention. I consider I have more than value for money.—A. Davies.

NOTE.—Now what does this oft repeated word "promptness" signify? Simply, that I possess the birds in the flesh and feather, and not merely on paper, and do not fail to remember, that these are the unsolicited words of others—not mine.

For a full detailed list of others, I will at once post on application, and upon receipt of stamped directed envelope, send any particulars required.

Travelling Cages, to hold one bird, 4d.; for two birds, 6d.

W. RUDD, The Bird Specialist, **NORWICH.**

JOHN FIRTH

HAVING now selected my breeding stock, I have a few good birds to dispose of at reasonable prices; approval, cash or deposit; inspection invited: 9, Munster-st., Wakefield-rd., Bradford. (857)

Buff: 1, 2, Kennedy. Gr. or Cinn.: 1, Thomson; 2 Kennedy. Washing exhibition arranged for Mar. 17 by President and Vice-pres.—A. Thomson, Sec.

SKEWEN C.B.S.

On March 5 the Skewen C.B.S., held a very successful exhibition at the Headquarters, the Crown Hotel. Everything was free of charge, and the object was to secure as many new members as possible. A considerable number of birds were staged, and the attendance was excellent. The arrangements for staging the exhibits were in the hands of Messrs. A. Taylor, M. Thomas, and S. Pattinson, who did their work excellently. It is hoped that as a result of the exhibition many new members will turn up at our next meeting, March 19 at 7, at the Crown Hotel.—Thos. Pattinson and Ernest Daniel, Joint Secs.

STOCKTON C.B.S.

Annual pair show, Mar. 1, Little Regent Hotel. There was a good turn-up of exhibitors, and quality was of the best. Mr. J. Carr judged. Nor. Yell. Ck., Buff Hen: 1, Hutchinson; 2, Walker; 3, Yates; 4, hc, Sanderson; vhc, Bean; c, Barrett. Buff Ck. Yell. Hen: 1, 4, Sanderson; 2, 3, Bean; vhc, hc, c, Yates. Yorks. Yell. Ck. Buff Hen: 1, vhc, hc, Hutchinson; 2, 3, 4, c, T. Carlisle. Buff Ck. Yell. Hen: 1, 3, Hutchinson; 2, 4, vhc, hc, c, T. Carlisle. Muling Pairs: 1, 1, Barnett; 2, Preston; 3, Saville; 4, vhc, hc, Clark. A hearty vote of thanks was given to Mr. Hodder for kindly acting as judge. Mr. Hodder commented on the fine show, especially the Yorkshires. British and Foreign Show April 4; all fanciers invited, also new members.—C. G. Martin, Hon. Sec.

N. LIVERPOOL C.B.S.

Annual pair show, Feb. 28, the Ante-room, at Headquarters, the Hall, Royal St., Kirkdale, proved inconveniently small, so numerous were the exhibits. In getting through their big task in a little more than two hours, the judges, Messrs. J. Lobb, of Bootle, and J. Abbot, of Liverpool, did remarkably well, and to the general satisfaction. Mr. Wilkins (chairman), with Mr. Holden (hon. sec.), and the stewards, Messrs. H. Jordan, M. Cattle, J. Lloyd (Garston), S. Worral (Bootle), H. Satterthwaite (Seaforth), and R. Jones, hon. sec. Liverpool B.B.S., did all possible to ensure the success of the show. Among the many gratifying features were the increased support accorded the Norwich and British bird sections, and the initial success of the Junior Champion Yorkshire Section. The success of the opening show of the season augurs well for the various cup competitions.

Yorks. Champ.: Yell. Ck., Buff Hen: 1, Satterthwaite; 2, Roberts; 3, Knight. Buff Ck., Yell. Hen: 1, 3, Satterthwaite; 2, Knight. Yell. Green Ck., Buff Hen: 1, 3, Roberts; 2, Satterthwaite. Buff Ck., Yell. Hen: 1, Roberts; 2, 3, Satterthwaite. Junior Champ.: Yell. Ck., Buff Hen: 1, vhc, Jordan; 2, hc, Baynes; 3, Satterthwaite; c, Worral. Buff Ck., Yell. Hen: 1, vhc, Satterthwaite; 2, 3, Jordan; hc, c, Baynes. Yell. Green Ck., Buff Hen: 1, Jordan; 2, vhc, Worral; 3, Baynes; hc, Satterthwaite. Buff Ck., Yell. Hen: 1, Jordan; 2, hc, Satterthwaite; 3, vhc, Worral. Nov.: Yell. Ck., Buff Hen: 1, Hayes; 2, Cattle; 3, Gidman; vhc, Barr; hc, Nugent; c, Fitzsimmons. Buff Ck., Yell. Hen: 1, Fairley; 2, Cattle; 3, hc, Hayes; vhc, Barr; c, McCarthy. Yell. Green Ck., Buff Hen: 1, Fitzsimmons; 2, Costello; 3, Hayes; vhc, c, Gidman; hc, Sinclair. Bullf.: 1, 2, Satterthwaite; 3, Thistlewaite; vhc, Frankham. Chaff.: 1, 3, hc, Satterthwaite; 2, Thistlewaite; vhc, Hammond. Bramblef.: 1, 2, Satterthwaite; 3, Frankham. Greenf.: 1, Satterthwaite; 2, Thistlewaite; 3, Hayes; vhc, Hammond; hc, Senogles; c, Wilkins. Lesser Redpoll: 1, Thistlewaite; 2 3, Battersby; vhc, Satterthwaite A.O. Hardbill: 1, Percival; 2, 3, vhc, hc, Satterthwaite. Softbill: 1, Satterthwaite; 2, 3, Mrs. Holden. Mule or Hyb.: 1 Satterthwaite; 2, Hayes; 3, Thistlewaite; vhc, Frankham; hc, Mrs. Holden; c, Percival.—(Kindly see note at head of Members' Shows.—Editor.)

PENYGRAIG C.B.S.

Pair show, Mar. 3, Butcher's Arms, Penygraig. Mr. A. H. C. Legg (Porth) judged, and gave satisfaction. Secs., Messrs. Hollingshead and Edwards, and show manager T. L. Evans, carried out their duties to a nicety. Special, best pair, also Single Border and best Border pair, T. L. Evans; 2nd best pair, best Brit., best pair Yorks., Hollingshead and Edwards; best Green Border, Whitman; best Cinn. Border, T. James; best Nor., Wm. Morris.

Single Nor., Cl.: 1, Morris. Var.: 1, Morris. Yorks. Hen, Yell.: 1, Whiteman. Var.: 1, Whiteman. Single, Self or Foul: 1, Whiteman. Yorks. Yell. Ck., Buff Hen: 1, 2, vhc, Hollingshead and Edwards; 3, Laurance; hc, Padfield. Buff Ck., Yell. Hen: 1, Whiteman; 2, Morris; 3, Laurance; hc, Hollingshead and Edwards; vhc, Padfield. Bord., Single, Cl.—Yell. Ck.: 1, Evans. Buff: 1, Evans. Yell. Hen: 1, Evans. Var. Ck. or Buff Hen: 1, Evans. Single Green or Cinn.: 1, James; 2, Whiteman; 3, Hollingshead and Edwards. Var. Yell.: 1, Padfield. Yell. Ck., Buff Hen: 1, James; 2, vhc, Hurle; 3, hc, c, Hollingshead and Edwards; c, Padfield. Buff Ck., Yell. Hen: 1, 2, Evans; 3, James; vhc, Padfield; hc, Hurle. Pairs, Greens: 1, Hollingshead and Edwards. Goldf.: 1, Padfield. Bullf.: 1, Hollingshead and Edwards; 2, James. Linnet: 1, Hollingshead and Edwards.—A. H. C. Legg.

Club Reports.

GREAT HORTON O.S.

Owing to the prize distribution being on the same date as our usual one, the next meeting will be held March 17. Officers elected for 1917:—President, Mr. F. Self; vice-presidents, Messrs. F. Brown, W. Firth, W. Ormandroyd, J. Shackleton, and E. Self; secs., F. Hodgson, J. Holroyd; auditors, Messrs. F. Brown and J. Shackleton.—F. Hodgson.

BOLTON ROLLER C.C.

Meeting, Mar. 1, Joiners' Arms. A very interesting lecture was given by Mr. Kilshaw on the song tours and how they should be sung, a large number of members and friends being present. We have added to our list 14 new members, for all seemed very interested. A hearty vote of thanks to Mr. Kilshaw for his lecture brought a very pleasant evening to a close.—T. Ormston, Sec.

JARROW, HEBBURN C.B.S.

Meeting, Victoria Hotel, Wednesday, March, 7, Mr. R. Butler chair, and a good attendance of old members and a few new ones. Decided that we hold fortnightly meetings. Various dates were proposed for holding F.F. shows, but it was decided to leave it over till our next meeting, when the election of officers will take place, and new members made. A hearty invitation is given to all old and new fanciers to join us.—H. Ayers, Sec.

ACCRINGTON C.B.S.

Meeting, Mar. 1, Crown Hotel, Mr. Harwood presided over a good attendance. Prize money and specials were paid out. Decided to have a social evening, Mar. 21, at 7. Fanciers and friends in the district are invited to what will be an enjoyable evening. The sec. invites fanciers in the district to send their names to him, so that they can be proposed at next meeting; 1s. entry fee, and 6d. per month.—Wm. Parkinson, sec., 13, Cedar Street.

NATIONAL BRITISH BIRD & M.C.

Annual general meeting, "Red Lion" Hotel, York Street, Piccadilly, Mar. 1, Mr. J. Robson chairman. The officers for the past year were re-elected for 1917, after which correspondence was read and dealt with. The club's gold medal was awarded to Mr. Anderson, of Darvel, for the rarest Hybrid bred and exhibited in 1917 (Thrush-Blackbird). Unfortunately this bird died some few weeks ago, so that the only Hybrid of this cross recognised by the club will not be seen again except in the London and P.O.S. collection of stuffed birds. At the adjourned annual meeting, April 26, a proposed alteration in the paragraph dealing with the gold medal for rare Hybrids, under the heading of Notes to Secretaries, will be dealt with.—E. Stephens, Hon. Sec.

SUNDERLAND C.B.A.

Meeting, Mar. 10, Station St. Cafe, Mr. Farrar presiding. Chairman gave a lecture on the breeding of the Yorkshire Canary, which was very interesting and enjoyed by all. On the conclusion questions were asked and a most interesting discussion took place. There was also on view a Yorkshire brought by one of the members to help in the discussion on "What is a ticked bird." The bird in question had a mark on the back which was only on the end of the feathers and not extending the full length of the feather. The members came to the conclusion that the bird was marked, not ticked. Members turned up well to hear the lecture, but we should like to have seen a few more visitors, as there were only two present; anyhow, we shall probably have a larger number with us next meeting, when Mr. G. Davidson is to read a paper on the Lizard Canary. A vote of thanks was accorded Mr. Farrar for his excellent lecture.—F. Riseborough, Assist. Hon. Sec.

GLASGOW (West End) C.B.C.

Meeting, Mar. 9, Co-operative Hall, St. George's Cross, Mr. P. Allan presiding over a good attendance. Specials and prize cards for pairs show were paid out to members present. The services of Messrs. E. Barron, Glasgow, and Mr. G. Hislop, Stirling, have been secured as judges for annual members' show, Nov. 17. Mr. Archbd. Gillespie was elected a Vice-president, and Messrs. James Braid, Joseph Braid, and D. Reid were added members of Committee. Unanimously decided to have the same classification for F.F. show as last year—21 classes. Specials for British and Foreign Bird Show were kindly given by Messrs. P. Allan, W. Proudfoot, J. Campbell, and Joseph Braid. Table show of British and Foreign birds was also held, entries being slightly down from last year, but although quantity was short, quality was forward in abundance. Mr. Craig, Tollcross, judged, and gave every satisfaction. Goldf. or Bullf.: 1, Hyslop; 2, P. Allan. Linnet: 1 D. Reid; 2, P. Allan. Green.: 1, Joseph Braid; 2, Glass; 3, sp, P. Allan. Redpoll: 1, sp, P. Allan; 2, 3, Glass; 4, Joseph Braid. Hens for Hybrid Breeding: 1, D. Reid; 2, Joseph Braid. Bunting: 1, P. Allan. For.: 1, 2, sp, P. Allan. Light Mule or Hybrid: 1, Hyslop. Dark Mule or Hyb. 1, P. Allan. Special most points: P. Allan. Next meeting April 13, in Co-op. Hall, at 8; this is to be a "hat night," and every member is requested to be present to take part in the many discussions, which will be very interesting, especially to young members. J. Campbell, Sec. and Treas.

ALFRETON C.B.S.

Meeting and table show of muling and hybrid pairs, Red Lion Hotel, Mar. 10. Mr. Newton chair, and a poor attendance, owing to the inclement weather. Decided to hold a table show of British. Classes: Goldf. or Bullf.; Siskin, Redpoll, Linnet, or Twite; A.O.V. Brit.; British hen. Mr. T. Barlow judge 1/3 on first cage special on each class; birds to be staged by 6.30. Result of table show: Muling Pairs (5); 1, vhc, Webster; 2, Evans; 3, Sawer Bros.; hc, Newton. Hybrid (4): 1, 2, Evans; 3, Webster; vhc, Abbott; winners of specials; A. Evans and A. Webster. Mr. W. Evans judged and gave satisfaction. New members elected: Mr. Attenborough and Mr. W. Whittaker.—G. Sawer.

LOCHGELLY C.B.S.

Washing exhibition and competition, Bay Horse Hotel, Mar. 3, Mr. M. Smith chair. Messrs. G. Raith and J. Anderson gave a demonstration of how to wash and handle the birds in the process which was greatly appreciated. Mr. A. Anderson judged the competition. Result: W. Grewar's gold centre silver medal, Melville; 2, Gourdie. The rest of the evening was spent in song and sentiment. The following contributed: Messrs. M. Smith, R. Gourdie, J. Forsyth, J. Petrie, J. Raeburn, J. Watson, J. Taylor, and R. Stewart, while Mr. C. Mason gave some nice selections on the gramophone. A vote of thanks to the chairman and artistes brought a most enjoyable evening to a close.—W. Grewar, hon. sec.

EAST HAM C.B.S.

Meeting, table show, and washing competition, Mar. 8, Town Hall; chairman, Mr. H. J. Kybert, a good number of members spending a very interesting and instructive evening. Mr. and Mrs. Wilkes and Mr. F. Hutchinson were elected members. Decided to hold annual show Dec. 1, instead of Nov. 24, as previously arranged. Hon. sec. reported a profit on inter-club show. Table show, judge Mr. W. L. Taylor. Yorks.: 1, 2, Parker; 3, Noakes. Nor.: 1, 3, Manning; 2, Ferridge. Brit.: 1, 2, 3, and best bird in show, Parker. The washing competition resulted in a win for Mr. Ferridge, who was also accorded a vote of thanks for his efforts in helping to make the competition a success. Next meeting, April 12; egg food competition final; judge, Mr. J. A. Webb; also paper by Mr. F. Onslow.—H. J. Kybert, chairman.

LIVERPOOL B.B.A.

Meeting, Mar. 8, Oldham Hall, Mr. E. Bunner chair, and a fair attendance. The members gave a hearty welcome to our esteemed friend, Mr. Hunt, who has been on the sick list for some considerable time, and has so far recovered that he can be amongst us again. The chief item for the evening was an egg food making competition for novices. Messrs. Phillips, Leatherharrow and T. R. Jones competed, and the competition proved very interesting, especially Mr. Phillips' method, who used egg and bread crumbs, adding maw seed, which I am sure is worthy of imitation. The judges gave every satisfaction. Messrs. Phillips and Leatherharrow 22 points each; Jones, 16. Afterwards there was a general discussion on egg food, in which Messrs. Abbott, Evans, W. Jones, Plunkett and Hunt gave their experience. The meeting proved to be very interesting and instructive.—T. Jones, sec.

CLAPHAM C.B.A.

Meeting, Mar. 5, prize money for pair show was paid out; the balance sheet of the show showed a small deficit, which was made up by the chairman. Sec. announced that he had received 10s. from Miss Smith, and £1 from Mr. A. J. Clarke as donations to help to reduce the heavy deficit made by the open show last year. The meeting warmly appreciated the generosity of the donors, and the general feeling was that if sufficient further donations are received to warrant our holding an open show this year, we shall certainly do so. The meeting passed a vote of sympathy with Mr. Allen Silver, and also with Mr. Hy. Yeoman, who has just recovered his health, after undergoing his fifth operation, and sec. was instructed to send suitable letters in each case. The writer had the honour of an invitation to address the next meeting on the subject of British Buntings. Cups and medals won last year will be given out on that occasion.—A. R. Coe.

Linnets for Contest Singing.

By FRED ALLEN, HULL.

We have recently had several enquiries as to whether the owners of contest-singing Linnets added anything to the drinking water to strengthen their song, and the following article has been kindly written by a well-known Linnet fancier in reply to a question we put to him on the matter.

PERSONALLY, I do not agree with putting anything into the water to make the birds sing. I know some fanciers who have tried this treatment, but I do not know any who found it a success. The late Mr. Walter Cunningham (a retired gentleman, who would give more money for a Linnet than any gentleman in England) used to put a few drops of whiskey in the water, but I know he never had much luck, although he had some of the finest birds living. Moreover, most of his birds died before he had had them long; this I put down to the whiskey.

One of the finest birds this gentleman ever owned was a Canary on Linnet song. I shall never forget it; it was a marvellous chattering bird, and if my memory serves me rightly, Mr. Saul, of this town, purchased it for £7.

Another fancier, the late Mr. J. Thompson ("Old Jim" as he was known), once told me that he had tried a drop of gin before sending a bird to a contest, but after the contest he mentioned he would have been better off if he had drunk the gin himself.

The late Mr. Jack Jarman, of Woodhouse, had a team of Linnets that will never be forgotten by the older Leeds fanciers. Jack's birds were first, second, and third every week, and no one could beat them. Here was a fancier who could beat all comers, and one who never put anything in the water.

This gentleman sold me two Linnets for 23s. 6d., which later produced me a strain that won all before them, but Mr. Summers, the present secretary of the Clarence Linnet Club of Leeds, purchased Mr. Jarman's best bird. It was a good one, and had one of the cleanest forms of song ever heard. Mr. Summers has won many prizes, and yet he has never put anything in their water.

The Mystery Bottle.

My father and myself won many firsts, and I well remember after we had won, some fanciers used to say, "How do you do it?" My father used to say, "I gave them a drop out of the bottle last night," but being a comedian it was only natural that he should play a joke on them. I do not know if he was the first to invent the "drop out of the bottle," but I do know that it spread, and many fanciers used to ask one another if they had tried a drop out of the bottle.

I have had many a good laugh over the following story:—A fancier once paid us a visit, and mentioned that he would be very pleased to know if it was true we gave our birds a drop out of the bottle to make them win. My father did not answer the question, but seeing the gentleman had a very bald head he gave him a small medicine bottle full of water, and told him not to use it until he got home, because the last chap he gave some to used it at once, with the result that he had to get his hair cut twice before he got home.

I can say without fear of contradiction that I have had my share of prizes, and I have never, on any occasion, put anything in the water. Those who do put anything in the water do not have any more success (if as much) as those who do not. I fail to see how spirits can improve a bird. Anyway, I can assure readers that it is not greatly practised.

Good Moult; Good Song.

To get a Linnet to sing anywhere with his wings down, it is most important that he should be given a proper moult, for if the bird is not given a proper moult, a fancier may labour for all he is worth, and never get his bird to that high quality of condition needed to win.

The second most important item is the feeding, and whilst on this subject I may mention that I have received many letters from fanciers stating that they have fed their Linnet the same as advised by me in Nutshell No. 2, and yet have not got them to sing at a contest. I take this opportunity of informing readers that the article on feeding was not written by me (I wrote the song portion at the end). The method of feeding mentioned in the Nutshell is very good, and if followed will most certainly get a bird into good condition, but in my idea it will not get a Linnet to that high condition needed for contests.

I have mentioned previously that the most important is the moult; give the bird a very cold moult, and during moult feed on nothing but black rape and linseed, half and half, but mind that the bird gets a cold moult. This can easily be done by putting a cloth over the cage, and keeping it damp.

The Proper Seed Mixture.

After the moult the best mixture for contest singers is ¾ lb. summer rape, ½ lb. English rape, ¼ lb. each of Canary seed and linseed, all mixed together. This mixture can be given all the year round, except when moulting. If one has no secrets of his own, as regards tit-bits, the one I should advise all novices to use is dandelion seed, to be given half a teaspoonful every two days. The best time to give it to the bird is when he has just finished his training.

Going back to the bottle business, I must confess that I spray a certain liquid on my secret mixture, but I can honestly say that I have never put the liquid in the water. Anyway, it acts. Mr. Plows, the popular secretary of Kippax Linnet Club, gained a second and third first time of using.

The first question a novice must ask himself is, "Have I got the right birds?" If one has not the right class of birds it is no use trying to make them proud. Some birds will never make contest birds, therefore a novice should educate himself in picking the proper class. The tailor will tell you if you have good cloth you will have a good suit, and the same applies to birds.

The novice may ask, how he can choose the right class of bird. The answer to this is, choose a bird that does not seem timid, one that takes to cage life, not one of those that try to get out of sight. If the novice will follow this advice he will soon find he is on the right track, but above all he must have patience. All those who are winning at the present time are, nearly in every case, fanciers with long experience.

In conclusion, I strongly advise the novice to leave the bottle business well alone, because if his hopes of success lie in this direction he is bound to have many disappointments, which may terminate his hopes of ever being successful.

SHOW DATES FIXED.

To secure insertion in this column, a guarantee that the show will be advertised in "C.B." to the extent of at least 25/- must be sent to our manager.

England.

Nov. 1.—**Blaenavon C.B.S.**—(Geo. Broome, 82, King St.)

Nov. 3-5.—**Leicester Hand-in-Hand C.B.S.**—(Day and Roberts, 28, Francis St.)

Nov. 14.—**Coventry O.S.**—(J. Kent, 91, Villiers St., Stoke, Coventry.)

Wales.

Nov. 15.—**Swansea C.B.A.**—(J. H. Ford, 83, Norfolk St.) D.J., S.J.N.

SCALE of CHARGES, which must be fully PREPAID

½-inch 3/6, 1 inch 6/-

CAGE BIRDS, 154, FLEET STREET, LONDON.

Cage Birds

and Bird World.

A Guaranteed Circulation amongst 50,000 readers weekly

Offices: 154, Fleet Street, London, E.C.4.
Telegrams—"Aviculture, Fleet, London."
Tel. No. 5229 Holborn.

The Editor is always glad to receive and consider suitable contributions, whether articles, sketches, or photographs. Provided an addressed envelope, sufficiently stamped, accompanies same, every effort will be made to return unaccepted contributions promptly, but he does not in any case hold himself responsible for their safety.

All matter intended for publication must be written or typed on one side of paper only, and must reach us not later than the first post on Tuesday if insertion in the next issue is desired.

"CAGE BIRDS" will be sent post free weekly, on the day of publication, at the prepaid rate of 10s. per annum for the United Kingdom, and 13s. annually for foreign countries.

Twitterings.

Mr. R. W. Gray, 6, Otley Terrace, Hopetown, Darlington, writes that he has taken over the secretaryship of the Darlington C.B.S. in place of Mr. W. Harfield.

At a meeting of the Sheffield O.S. on March 10th, at Rotherham House Hotel, Exchange Street, writes Dr. W. Craig, Mr. Robson will lecture on general management and pairing, etc. Friends and fanciers will be welcome.

Messrs. Day and Roberts write that they have been compelled to resign their position as Joint Secretaries to the Leicester Hand in Hand C.B.S., and that Mr. E. H. Hulse, 23, Hartington Road, has been appointed in their stead. All future communications should be made accordingly.

Motherwell and Dist. C.B.A., writes Mr. Andrew Lees, sec., 14, Kirk Street, Motherwell, have opened their club to fanciers of the surrounding districts (no specified radius). Fanciers interested might attend the first meeting in Y.M.I., Brandon Street, on March 24, at 7.30, or apply to secretary.

In order to meet the condition of the Railway Companies that after April 2 the carriage of all parcels must be prepaid, Mr. Enoch Tams, Church Street, Longton, has issued a revised price list in sheet form. A small addition to the old prices has been made to cover the carriage, so that purchasers will know exactly what the goods will cost delivered carriage paid.

I wish to thank you for publishing my letter re the Scotch Fancy, writes Mr. Geo. Dix. Please convey my best thanks to your artist, Mr. Norman, for so kindly finishing my sketch. I have had several congratulations respecting the model, some from Ireland, and many consider it the best ever seen. Again I thank you, and wish Cage Birds still greater success.

The London and Counties A.C.B. are holding a social evening and a light supper on March 26th at the Victoria Hotel, the corner of Farringdon Road and Charterhouse Street, E.C. Chairman will be Mr. J. Robson, and a grand company of artists will appear. Admission, 1s. 6d., including tax; doors open, 6.30, start 7 sharp. Fanciers who would like to spend an enjoyable evening kindly communicate not later than March 20th with the Secretary, W. Gilbert, 42, Cowcross Street, E.C. (Advt.)

I was more than surprised when Cage Birds arrived, writes Mrs. Hart Madagan, to see my Crest-bred Cock, 2nd Birmingham, to see front page of Cage Birds. Please accept my best thanks for giving it such an important position. Great credit is due to your esteemed artist, Mr. Norman, for the life-like portrait. I think it a great honour for any exhibitor to get a portrait in Cage Birds. Please do not mind me calling your attention to a slight error. The owner's name is Mrs. Hart Madagan, not Mrs. Madagan Hart.

The winners of specials at the recent pair and Finch show of the Clapham C.B.A. were: Most points Canaries, champ., Hawkins; nov., Westrip; most points Hybrids, and most points Softbills and foreign birds, Vale; most points classes 18-23, and classes 24-29, Coe; best Goldfinch, Hose.

Drinkers at Porth Show: An Apology.

I have received a letter from Mr. Edwards, of Penygraig, writes Mr. A. H. C. Legg, hon. sec., Porth and Rhondda Valleys C.B.S., referring to a hasty statement made at the Porth Show Dec. 14 last, accusing Mr. Padfield, of Penygraig, of packing drinkers which did not belong to him. Mr. Edwards now wishes to make a public apology, and trusts this will be satisfactory to Mr. Padfield.

Show Dates Fixed.

Mr. W. H. Johnson, joint show manager, writes that the second annual show of the Barrow C.B.A. will be held on Dec. 7, 8 next, and Mr. J. H. Ford, sec. Swansea C.B.A., writes that the annual show of the Society is fixed for Nov. 15. Mr. D. Jenkins will judge Canaries and Mr. S. J. Nicholas the remainder. In order to avoid clashing secretaries should note these and other dates as published.

An Important Postal Regulation.

It will, of course, be known to all our readers that the Postmaster-General has made an appeal to the public in London and their correspondents in the Provinces to comply with the method which has been devised in order to save labour in the Post Office and money for the country.

In the scheme which has been devised every delivery office in London will be numbered, and letters for streets served by any particular office must bear a number corresponding with that office.

For example, Fleet Street will be known as Fleet Street, E.C., 4, and letters for our offices must therefore be addressed, Cage Birds, 154, Fleet Street, London, E.C., 4. London correspondents should be careful to give the distinguishing number of their own street as part of their address. The absence of these numbers will lead to delays in delivery, and those who omit complying with the regulation will have only themselves to blame.

An Insufficient Address.

Will "Mr. Taylor, 117, York Road," please send us his full address. There are many "York Roads" even in London, and a letter so addressed would not be likely to find him.

A Saturday Show in London.

The British Bird Show of the London and Counties A.C.B. will be held this evening, March 17th, at the Victoria Hotel, Charterhouse Street, Farringdon Road. The show opens at 7.30, and admission will be free.

How Fanciers Help.

I am pleased to inform you that I sent £8 2s. to the Coventry and North Warwickshire Hospital, being the profit of the members' show held Feb. 17, writes Mr. A. Wright, hon. sec. Coventry Godiva C.B.S.

A Leeds Fancier in a Dublin Hospital.

Mr. E. Norton, late hon. sec. of the Leeds C.B.S., and whose present address is Pte. E. Norton, 2573, D Company, 2nd Batt., 8th Royal Scots, H. Block, 3 Room, Richmond Barracks, Dublin, would like to make the acquaintance of Dublin Cage Bird fanciers.

Birds, Bones, and Butchers.

Starvation will be the lot, says W. A. Croft, writing to the "Sheffield Daily Telegraph," of many good friends of the feathered tribe unless we make good the food deficiences caused by the renewed keen frosts. It is unknown to many of the kindly disposed that breadcrumbs are quite useless to many of the gardener's best friends, the insectivorous birds. If your readers will hang out, preferably in a tree, shell bones such as the butcher usually sells to dealers at a few pence per stone, they will be amply rewarded by the visits of many pretty strangers with wonderful gymnastic abilities, and will also have the knowledge that they have assisted in the food production campaign by maintaining those creatures which will materially assist in keeping the insect scourge in check.

[This is all right so far as the uselessness of breadcrumbs as food for insectivorous birds is concerned, but we have to find a butcher in these times who would sell bones of any sort at "a few pence per stone." The birds, which are "the gardener's best friends" in destroying the grubs in the soil would, moreover, scarcely display wonderful gymnastic abilities in clinging to bones hung in a tree.]

Mr. J. W. Thomson, sec. Midland Roller C.C., writes that he has now the British Roller C.C. rings for disposal, and that in accordance with rule 7 of the club annual subscriptions must be paid before the rings can be issued.

A Macaw as a Mascot.

Amongst the many regimental "mascots" which have been deposited at the London Zoological Gardens is a Macaw, which, says "The Queen," was at one time the mascot of a certain ship which went into action at Heligoland and the Dogger Bank. Though unwounded he came out of action decidedly the worse for wear, and minus several feathers. In fact, when he was received at the Gardens it was quite time he was ordered into hospital. He is now, however, it is satisfactory to say, making a good recovery, and it is hoped will live to a good old age and to be a celebrity in the Macaw world.

The Song of the Missel Thrush.

Almost the only living creature who seemed thoroughly to enjoy the recent prolonged spell of bitter weather, says "The Manchester Guardian," was the Missel Thrush. He sings from time to time throughout the winter, but is heard to best advantage on cold, stormy days of February, when, swaying to and fro upon the topmost branch of some tall tree, he chants his wild refrain in weird harmony with the climatic surroundings.

It is from this eccentric trait in his character that he has gained the popular sobriquet of "Stormcock," for, unlike the other Thrushes, he does not sing during the breeding season. Some people, even country-bred lovers of bird song, seem unable to distinguish between the notes of the Stormcock and those of the Song Thrush or even of the Blackbird.

But the song of the Missel Thrush ought not to be mistaken for either of these. It consists of from three to six loudly whistled notes, given hurriedly and in a manner which has been unkindly compared to "the crow of some musical bantam cock." The same strain is sometimes repeated a dozen times in succession.

Curiously enough, a young Blackbird beginning to acquire his full notes also sings such brief strains with few variations. So the Missel Thrush seems to be the stern, unbending Tory of his family who still retains unchanged the original type of Thrush song.

Seasonable Hints on Useful Weeds.

By RICHARD MORSE, F.R.H.S.

A new weekly feature which will be found of the highest value to all who keep seed-eating birds, and of interest also to all who appreciate the beauty and usefulness of the flowers of our waysides and meadows.

The Coltsfoot.

Flower, Bud and Leaves of Coltsfoot.

I HAVE just returned from a walk across the fields, and though the calendar says we are rapidly approaching the middle of March, the countryside is still in the grip of winter, and save for a few occasional notes from Thrushes and Hedge Sparrows there is little to remind one that spring is nearly upon us.

On account of this prolonged severity of the weather, the wild flowers this year are disappointingly late, but growth is already evident in many of the early bloomers, and as soon as we get a few days of genial spring sun they will doubtless rush into flower with extraordinary rapidity, and so do much to make up for lost time.

My first Coltsfoot (Tussilago Farfara L.) blossoms last year were gathered on Jan. 28, and yet in the same spot to-day not a single bud has burst its covering, though the stems are now well above the ground, and by the time these words appear the bank will probably be everywhere dotted with yellow and alive with busy honey bees eager for their first draft of nectar.

Although these elegant little flowers are abundant in most country districts, they are not at all widely known, principally, I suppose, on account of their very early appearance, and the comparative unattractiveness of the countryside at this early season of the year to any except the truest lovers of nature.

Where to Find Coltsfoot.

The Coltsfoot is never so abundant as on poor, clayey soils, and in such a habitat it may usually be found in the greatest profusion. The general appearance of the bud, flower head and leaves, is shown in the accompanying sketch, but it should be noted here that one never sees the flowers and leaves at the same time, as one is accustomed to do in the majority of other plants, for the leaves never expand until the flowers have withered, a peculiarity which marks the Coltsfoot as almost unique amongst British wild flowers.

The flowers themselves are of a pale and delicate yellow, and are made up of a great number of tiny florets packed closely together, the whole head measuring generally about an inch or slightly more in diameter. The stems reach a height of from four to ten inches, and are partially clothed with the scales which protected the tender florets during the early period of their growth.

After fertilisation, the flowers close, as if to inform the bees that the nectar is gone, and their work accomplished, and when next the head expands it will be to expose a globe of feathery down with seeds attached, for the wind to scatter far and wide. One has to watch carefully when this stage is reached, or a gale on a sunny morning may cause much loss and disappointment. The seed is produced in great abundance, and with care very considerable quantities may be gathered in quite a short time. The Coltsfoot has been highly esteemed as a household medicine for generations, and even its scientific name "Tussilago," is derived from the Latin word "Tussis," a cough, in reference to one of the principal troubles for which it has long been used as a remedy. Many aviarists, too, have testified to its great value as a food for most British birds, and also to its beneficial effect in cases of wheeziness. The large angular leaves, cobwebby above, and covered with dense white down beneath, were once much used in the making of medicinal cigars for asthmatic persons.

Readers are invited to send any botanical specimens which they have difficulty in identifying. The whole plant, including fruits, should be sent whenever possible. Packages should be addressed "The Editor, Cage Birds, 154, Fleet Street, London, E.C. 4, and must be accompanied by a P.O. for sixpence. Answers will appear in this column.

WHAT ADVERTISERS SAY.

"Many thanks for insertion of Cinnamon advert., but before this appeared I had sold all my birds through the previous advertisement. There should be no doubt as to value of advertising in CAGE BIRDS, as through so doing this season I have sent birds all over the British Isles, and a consignment in spite of war troubles to Canada. I have also had enquiries from New Zealand."—HY. CRAVEN, (Plymouth).

"The Birds advertised in CAGE BIRDS were all sold by Saturday. I have had so many applications that I could not answer all. I could have sold 50 more if I had them, and all for a few pence in advertising."—F. OWEN (Cannock).

"Kindly allow me to thank all those that applied for the two Norwich hens I advertised in last week's CAGE BIRDS. They are too numerous to reply to individually. I had to return some two dozen P.O.'s besides a couple of cheques."—J. KELLEY (Frome).

"Kindly withdraw my advert. this week as I have practically sold all I wish to dispose of. There seems to be plenty of money about for birds as I could have sold any number of pairs and single birds at high prices. I should like to say also that I am not quitting the fancy, but was forced to reduce my stock this season to twelve pairs instead of about twenty-five as I had intended."—J. W. GORDON-STEWART. (Ipswich).

"Thanks to CAGE BIRDS I have sold 22 Roller Canaries for a shilling advert. 16 of them were sold on Friday. I cannot reply to all and beg you will convey thanks to all senders. My shilling advert. resulted in above £11 in sales."—T. SWANN (Wavertree).

"I should like to thank, through CAGE BIRDS, the 38 fanciers who applied for the Norwich hens as advertised. They are too numerous to reply to individually. Besides the above number I had to return no less than 22 P.O.'s, 2 deposits, and 2 cheques, and still enquiries are coming."—J. KELLEY.

"Kindly thank the many enquirers for my birds. Through one single advert. I had letters from all over the United Kingdom and Ireland, and could have sold them a dozen times over. I am a constant reader of good old CAGE BIRDS since its infancy."—JAMES McCINTY (Leith).

HEALTH & STRENGTH

Deals with all kinds of athletics, including Football Wrestling, Boxing, Weight-Lifting, Fencing Running, Ju-Jitsu, Gymnastics of all kinds, Swimming, &c., &c. Gives free advice on all questions of Health, Diet, &c. to all readers. EVERY THURSDAY, 1d. Sold Everywhere. Get a copy to-day; or send for Free Specimen to "Health and Strength," Windsor House, Kingsway, London.

THE ROLLER CANARY.

ITS BREEDING AND MANAGEMENT.

By J. EARNSHAW.

The following interesting and instructive lecture was given before the members of the Nelson Roller Canary Club, by the Secretary, Mr. J. Earnshaw, and, upon our request, has kindly been forwarded to us by the lecturer for publication. The very sound advice given will be of value to breeders of Canaries other than the Roller, to which it was especially intended to apply.

I RECOMMEND the novice to keep to sound healthy stock of good strain. Song cannot be brought out by training unless it is also bred in the birds. Never be tempted to breed from weaklings, as that way is failure and disappointment; even if successful in hatching and rearing, the moult will prove too much for sickly young birds.

Do not be tempted to pair up your birds too early unless you are prepared to take risks of egg binding. To pair up too soon is not gaining but losing time, as it cannot profit you to have a round of unfertile eggs. It only wastes the vigour of your birds and valuable time and labour on your part to no purpose, and nothing is more disappointing to beginners.

Don't Hurry the Pairing.

I recommend pairing during mild and settled weather, about the last few days of March or the beginning of April, and even then only when the birds are in high breeding condition, which cannot be mistaken by veriest tyro. The older fanciers will probably encroach a little on this time, and pair up a little earlier, but they know the riske, and ought to be prepared for trouble.

The birds at this time should be in the height of condition, the hen calling and bouncing from perch to perch, taking short flights into the air, and catching up stray feathers and carrying them to and fro. The cocks will be singing lustily, and, if put in sight of the hens, singing madly, and dancing to and fro. For backward birds at this time there is nothing to beat dandelion. I give them root and leaves daily, with egg food and mixed seeds on alternate days, not forgetting a little pinch of niger seed daily to the hens as a preventive of egg binding. The floor of the cage must be strewn with clean gritty sand, and a piece of cuttle fish must be stuck between the bars. Broken egg shells may be given to help the hen to form her shells. A piece of pork fat is also recommended as a preventive of egg binding.

When it is seen that the birds are in proper condition, the cock can be introduced; at first, they will often squabble in a most alarming way, and it would almost appear as though they would kill each other. The hen is generally master of the situation at the first pairing, owing to the fact that she will have been kept in a large flight with full freedom and use of her wings, and the poor cock having been kept in a small cage is not able to hold his own. For this reason some breeders will give the cock birds a larger cage for a week or so before pairing, to allow him to stretch his wings.

In most cases they very quickly settle down to business, and proceed to build their little home. Nesting material may then be supplied, and when it is seen that the hen is getting to work in real earnest she can be supplied with sufficient material to make a comfortable nest.

The Care of the Hen Bird.

The hen requires careful attention at this stage, especially in the first round of nests, and a little niger seed must not be omitted from the daily diet until she has laid her clutch. If the hen goes mopy towards evening and looks thick and full, watch her carefully the following morning. If egg binding results, she will be found huddled up on the nest, or in a corner of the cage looking very ill.

There is no mistaking this condition. If it is seen that she is in difficulties, act promptly, but don't get flurried, go about the job calmly. Get a jug of hot water about three-parts full, not so hot as to scald (always try it with your own bare flesh). Place a piece of thin cloth over the top of the jug, shape it out to allow room for resting place for the hen. Then catch her gently, and hold her over this, so that the vapour has full play to the vent. A drop of warm olive oil may be smeared on the vent.

If she is not relieved in a few minutes, place her on the nest in a small cage in front of the fire, and if she has not parted with the egg in about an hour's time repeat the operation at intervals of an hour or two. After the egg has been laid she will be quite lively, and can be returned to her cage.

When all goes on well, and the first egg is laid on the expected morning, the egg must be removed and a dummy substituted to keep her broody. Remove the eggs as laid, until the evening of the third day, and then return them to the nest in the evening. She will probably lay her fourth on the following morning, and commence to sit in real earnest.

Feed Plainly and Avoid Interference.

When she commences incubation the cock may be removed quietly, and the hen put on a plain diet. A piece of cardboard hung up on the wires in front of the nest helps her to keep quiet and shades the nest.

All interference either with nest or cage must now cease. Even the cleaning of the cage must be left alone excepting merely lifting away the dirt from the floor of the cage. On the evening of the 13th day from the commencement of the incubation the chicks can be hourly expected. In the afternoon of that day a little egg food or milk sop can be given to the hen, and in the evening a little hard boiled egg, minced fine, about a saltspoonful is quite sufficient.

Do not rush into the common mistake of surfeiting the hen with a rich variety of foods with the idea of tempting her to feed, or you may repent it, as you are more likely to make her sick and upset the hen with the sudden changes after the plain diet of incubation. This is a fruitful cause of the bogey known as sweating, which I do not intend to touch on this evening, as it is almost a subject in itself. Bad feeders and sweating hens will make a separate subject for some of our more capable members to deal with.

When the Young Arrive.

The best way is to bring her gradually on to the richer diet. For the first day or two a little yolk of egg at intervals of a few hours is quite sufficient. Leave the hen to herself as much as possible, and do not be alarmed if she does not seem to feed the young as soon as they are hatched, as nature provides the chick with nourishment for the first twelve hours.

After the first two days begin to give biscuit meal or bread crumbs, with the yolk of egg, gradually increasing the quantity of bread until they are on a diet of two-parts bread to one-part egg.

A spray of watercress or chick weed, or lettuce, may now be given in increasing quantities, and at abont the fifth day the diet may be varied by the addition of a little crushed hemp and broken groats, and the white of the egg can also be given grated fine with the egg food. A little soaked rape may be given at abont the tenth day, and the more liberal diet may now be given daily.

About this time it is as well to give a clean nest, made ready in a clean pan beforehand, and shaped out with a hot fowl's egg after putting in the material, such as cow hair, moss, or shreds of cotton. The grey warp or weft which cotton makers can easily obtain in the unsized state is fine for the purpose.

Keep an eye on the young birds in the nest from the fifth to sixth day onward, and be sure to ring them at the proper time, as if left until they are grown too big, crippled birds will be the result of attempting to ring. Young birds vary so much in size that no hard and fast rule may be applied as to the proper time for ringing.

It will be seen that the young birds are now developing an appetite, and the egg food must now be supplied in increasing quantities to meet their need. Always aim at just giving sufficient for the hen to clear up before next feeding time, as she will relish it all the more and feed better than when she is overdone and the food is always before her.

At about the end of the third week from hatching some of the more lusty young birds will be popping out on to the perches, and at this stage it is as well to go about your duties in as quiet a way as possible, in order to keep them in the nest as long as possible, as sudden movements or noises will frighten the young birds and away they go over the side of the nest, floundering about in the bottom of the cage. It is well to remember that the Canary is of a nervous temperament, and during the breeding season they are best left to themselves as much as possible. Never allow your breeding room to become a sort of peep show or camping place, as the sight of strangers is enough to upset birds of a highly-strung temperament.

'Ware Ladies' Hats.

Above all, watch your lady friends, and if a visit to the bird-room is permitted, insist on them removing their hats, as the sight of some of the strange headgear worn is sufficient to cause quite a panic, and the way some of them will go up to the cages, just to have a peep, saying "Sweet, sweet, pretty dick," is enough to make any hen forsake either eggs or young.

I cannot impress it too much on the young fancier to keep the bird-room as quiet as possible, as this often makes the difference between success and failure. However much accustomed to you the birds may be, it is better to take no risks.

All duties such as cleaning, changing nests, and ringing should be done in the evening, as it then causes least commotion, and the hens will usually settle themselves for the night and resume their duties the following morning as if nothing had happened.

At this time, when the young birds are popping out of the nest and venturing on to the perches, a sharp look-out must be kept, and at the least sign of plucking the youngsters must be removed and placed in a small nursery cage which is hung up on the wires of the cages. The cock is returned to the hen, if not already with her, and the parents will feed the young through the wires.

A good plan is to tie a piece of string to the bar so as to keep the hen busy and prevent her plucking the young. Keep her supplied with nesting material, and if she goes to nest before the young are ready for leaving the parents the cock will usually finish them off.

I never use dandelion *after* the first pairing up, as I find this to be an incentive to plucking, although I am well aware that some breeders will feed the young on dandelion, still I am of opinion that watercress or lettuce is a better green food for young with the parents. Dandelion brings the hen forward again too quickly, and before the young are properly reared.

The nursery cage must be kept clean and supplied regularly with food, and when it is seen that the young are able to feed themselves they can be turned into the flights and brought gradually on to the hard seed, but keep up the soft food for some time and wean them very gradually. Putting them on hard seed too early is the cause of loss, and youngsters going light.

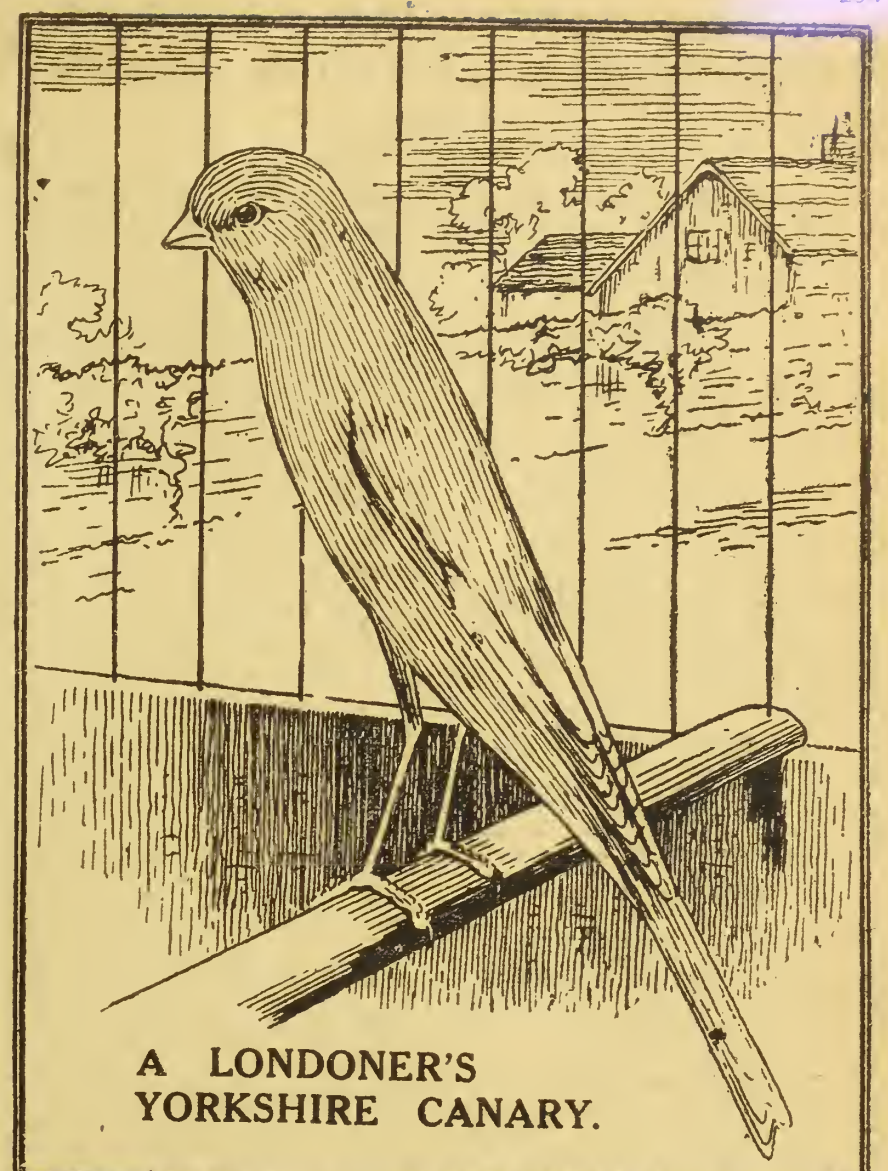
As the season advances, and the first rounds are well away, the weather will be getting warmer, and insect life is on the increase. War must be declared on the red mite, the chief enemy of the breeder. Strict cleanliness must be observed, for prevention is far better than cure, as one may find to his cost if the birds and cages become infested with this pest. They prey on the victim at night, and during the day they seek their hiding places, which are usually the ends of perches, and any slight crack or crevice in the cage. The nest itself is the happy hunting ground of the red mite.

Dealing with the Red Mite.

To check their ravages no half measures must be employed. Keating's powder, well dusted about the nest when setting the hen and changing nests is excellent. For the cage itself, a solution of camphor and methylated spirits is the best. Paint the mixture over the cracks and work it well in with a soft brush. Dip the ends of the perches into the solution and go over all the suspected places, such as the back of the cage behind the nest and all likely-looking places.

Be thorough in your methods; don't slip over it so that you can go to the pictures or football match. Your interest must be with your birds, and time spent in keeping them clean and comfortable is time well spent. This does not mean that you must always be cleaning and scraping and keeping your birds in a constant state of excitement and commotion: in this, as in all other things, there is reason. Just now (early March) is the time to overhaul your cages and give them all a good spring clean and the annual whitewashing or distempering, and see to all perches being made tight-fitting.

(To be continued.)



A LONDONER'S YORKSHIRE CANARY.

A fine Yorkshire Canary, which won 1st prize at the show of the East Ham C.B.S., for Mr. T. Purday, East Ham.

THE POULTRY WORLD.

The up-to-date, efficient poultry journal. Every number grandly illustrated and full of practical articles by experts. Invaluable for the beginner and the amateur.

Every Friday, 1d.

Advertisement Forms & specimen copy from "POULTRY WORLD," 154, Fleet St., London, E.C., 4

Nests of Birds, Poultry, etc., should be regularly sprinkled with KEATING'S POWDER, especially when hens are sitting. Don't forget to do this just previous to the eggs hatching, to destroy the Red Mite. Kills all insects. Harmless to everything else.

FAVOURITE FOREIGN BIRDS.

By "TYRONE."

(Continued from page 133.)

Some practical hints upon the treatment of the more inexpensive of the many beautiful foreign birds which may be kept as pets.

Three Coloured Nun.
(*Munia malacca.*)

The Three Coloured Nun has a black head and neck, white breast, and brown back, wings and tail. It is a native of India, and, though it will not breed in the aviary, is a quiet, amiable, but, to my mind, a singularly uninteresting bird.

In my aviary the Nuns seemed to spend their whole day sitting quietly upon a perch, with an occasional visit to the seed pans or water fountain, but they showed no amusing or interesting little ways, and, as their claws grew with wonderful rapidity, and had to be constantly cut to prevent them getting entangled in the wires, their presence in the aviary was more of an anxiety than a pleasure.

They are all extremely hardy, and will thrive on canary and millet without any soft food, and, but for the trouble with their claws, do not seem likely to die of anything but old age.

The Two Coloured Nun.
(*Munia sinensis.*)

This is also an Indian bird, and resembles the preceding species in habits and colouring. It has not the white breast, but is chestnut brown, except the head and neck, which are black.

White Headed Nun.
(*Munia maja.*)

The White Headed Nun, or Maja Finch, has a creamy white head and neck, and the rest of the plumage is chestnut brown. Food and treatment the same as for the other Nuns.

Bronze Mannikin.
(*Spermestes cucullata.*)

The Bronze Mannikin is such a cheerful little bird in the aviary that he is a general favourite. He is a small bird, but thickset and sturdy. His breast is white, and head, shoulders, wings, and back are black, with a lovely metallic sheen. The cock and hen are alike.

In the aviary he is hardy, and does not require very elaborate food, and yet he always seems to be happy and in good health. He is very strong on the wing, and even in a small aviary it is almost impossible to catch him with the butterfly net.

Bronze Mannikins have nested in aviaries, but it is by no means usual. Though only a small bird the Bronze Mannikin is very plucky, and would be quite capable of defending his nest even from birds twice his size. In a cage with smaller birds he might develop into a bully. The cock has rather a pleasant little song.

Nutmeg Finch or Spice Bird.
(*Munia undulata.*)

This bird is imported every year from India in very large numbers, and consequently is easily obtained for a small sum. He is very hardy, and amiable with smaller birds, and so he deserves a place in the aviary, although he possesses neither brilliant colouring nor a sweet song. His song, in fact, is quite an amusing performance. He makes a great show of singing, and hardly a sound can be heard. Male and female are alike. Their food should be the same as the preceding species.

The Grey Singing Finch.
(*Crithagra musica.*)

When the beginner in bird-keeping has prepared his cage or aviary, and goes to the dealer's store cages to select the birds to occupy it, it is not likely that he will be attracted by the sober grey and fawn colouring of the grey singing Finch.

And yet, if he only knew it, he is passing over one of the most attractive of the smaller birds, and certainly one of the best songsters, as its name shows. Its notes are loud and clear, and very sweet, and the bird is also good tempered with others and fairly hardy, even wintering safely in a garden aviary when thoroughly acclimatised.

Just at first he is rather delicate, and requires a little extra care. The Grey Singing Finch occasionally breeds in a garden aviary, building an open nest, like a Canary, in a bush or nest box. Their food should be white and spray millet, canary and egg-food, or ants' eggs, with plenty of flowering grass and chickweed. They are fond of bathing, and should be supplied with shallow water, as all these little birds hesitate to enter water more than half-an-inch deep.

Green Singing Finch or St. Helena Seedeater.
(*Crithagra butyracca.*)

The Green Singing Finch is nearly as good a singer as his grey brother, and is about the same size. Its plumage, in different shades of green, is restful among the brighter colours, and has a beauty of its own when the bird is clean and bright after a moult in the aviary.

The hen is a trifle smaller and greyer than her mate, and frequently sings nearly as well, and as they are always very lively, chasing one another about the aviary all day long, a real pair is often mistaken for two cocks.

These birds are very hardy, and if turned out in June may safely be wintered in a garden aviary, where they will be bright and cheerful, even in the coldest weather. Like the Grey Singing Finch, they build an open nest in a bush or nest-box. Some people give them a bad character as egg stealers, so they should be carefully watched if they are in an aviary where more valuable birds are nesting.

They will require the same food as the grey singing Finch.

The Silverbill.
(*Munia cantans.*)

This is another hardy, cheap, and most attractive little bird, though it is not brilliantly coloured. Its plumage is in soft shades of fawn, the back darker than the breast, and the wings and sharply pointed tail darker than either. The beak is leaden grey or "silver."

The cock and hen are difficult to distinguish, but the head and beak of the cock are generally a little broader than those of the hen. As the cock sings a soft and pleasant little song, this is generally the safer test.

Silverbills are most affectionate little birds, and where several are kept they go about the aviary in a little flock during the day, and all crowd into the same nest-box at night, like Bengalese; therefore, if it is wished that they should nest, only one pair should be kept in the aviary during the summer. During the winter the little flock certainly help to keep each other warm at night.

The Silverbill requires the same food as the Singing Finches.

(*To be continued.*)

THE HEDGE-SPARROW.

A sober-plumaged but pretty British bird not often seen on the show bench. The bird in our picture won 1st Prize and Special at Bedford Show for its owner, Mr. A. Simons, Bedford.

The Essentials of Aviculture.

By J. W. N.

(Continued from page 121.)

A Series of comprehensive articles, embracing the proper management of all kinds of birds in captivity, their housing, feeding, general management and diseases, and the breeding of species, Mules and Hybrids.

FOOD even slightly tainted will produce inflammation, so care given to its preparation is time well spent. The diet can be slightly varied about the 6th or 7th days by adding a little soaked rape to it, but this is not necessary although proving very useful where the hen is not a satisfactory feeder.

When the young are a fortnight old a fresh nest can be substituted if the existing one is very soiled, and about the end of the third week they will be ready to leave it. About this time, too, the hen sometimes starts to pluck them to obtain the feathers preparatory to going to nest again In this case they should be quickly removed to a nursery cage hung in front of the breeding cage. Here the parents can feed them through the wires, but cannot injure them.

The only other trouble likely to occur is that the hen proves a bad feeder. Very often the presence of the cock in the cage is the exciting cause, and if the hen is seen calling to him and taking no notice of the young then her lord and master is much better out of sight and hearing. A variety of seeds and plenty of green food, combined with the saline bath, are usually all that is required to make the hen perform her maternal duties satisfactorily.

If none of the foregoing accidents happen the young will be out of the nest at about the 21st day, and will start pecking about for themselves about a week later. At first egg food should be supplied, and some soaked Canary seed. A little cracked hemp and dry Canary seed can gradually be added, but do not be in a hurry in getting the birds on to hard seed. Their internal organs have to adapt themselves to the changed conditions, and if this takes place too suddenly the loss of one or more of the brood will be the inevitable result.

As soon as they are able to crack seeds for themselves the young should be transferred to a flight cage, where the exercise will develop their frames and give them every chance of becoming well built healthy adults. The egg food can be gradually diminished, and when it has ceased bread and milk given once or twice a week will prove very beneficial.

This description of the breeding of Canaries will serve as a guide to those who wish to breed other birds in cages. Naturally the nests will differ, and the food altered in many cases, but the technique is the same.

In the aviary few difficulties will as a rule be met with. The more natural conditions under which the birds mate seem to eliminate these, the only one of any importance that calls for special vigilance is egg-binding, and unfortunately this takes place here as in the cage.

The breeding of Mules and Hybrids I have purposely omitted, to deal with separately as will be seen, but the education of the aviculturist is incomplete unless he has experimented with this interesting branch of bird keeping, for here he will find that all his experiences and failures will prove a very useful foundation on which to build his methods when dealing with the crossing of birds.

Before leaving the subject of Canary breeding I should like to caution enthusiastic amateurs against taking too many nests in the season. As a general rule two nests are quite sufficient, although in some cases, where the birds are healthy and eager to nest again, three might be permissible if the season is not too far advanced when the hen has finished with her second brood.

In a state of nature birds rarely mate with other than their own kind, but, when caged, crosses between different species can be obtained, and such birds are known as "Mules" and "Hybrids."

What is a "Mule"?

By long usage it has come to be understood in the bird-keeping world that the words Mule and Hybrid have distinct meanings. Strictly speaking, the word Mule is wrongly used in connection with bird breeding, for in its proper application it means the offspring of a horse and an ass. It has, however, so long been the custom to use the word as meaning the progeny of a Canary and a Finch, while a Hybrid is accepted as being a cross-bred bird neither of whose parents is a Canary, that the misuse of the word is likely always to continue.

In some cases it is open to debate whether the resulting plumage is an improvement on that of the parent birds, and one could hardly hope in all cases for this when one is dealing with a cross that is contrary to nature, but most cross-bred birds show a new blending of markings and colours which is distinctly pleasing.

It is principally for their powers of song, however, that these birds are treasured, and certainly the blending of the songs of two different species is usually a musical treat the enjoyment of which is enhanced by the knowledge that skilful breeding has produced a new grouping of harmonious sounds. As the "Mules" excel in this latter qualification I shall deal with them first.

Favourite Crosses.

The two crosses most frequently met with are the Goldfinch-Canary and the Linnet-Canary. It is the general custom for the female parent to be the Canary, and if size and shape of the Mules be points wished for, then the Norwich Canary is the most suitable. For amateurs, and those who do not wish to exhibit, the cross with a Roller Canary hen is the one recommended, as they are prolific breeders and good feeders, whilst the song of the young is of a very high order.

In pairing these birds the same rules must be observed as are found necessary for breeding birds of the same species. Where exhibition is intended the yellow Norwich hen should always be used, and the Finch carefully chosen. He should be as large as possible, of good proportion, and with markings distinct and well coloured.

In overcoming the difficulties involved in trespassing the laws of nature, the first point is that the health of both birds must leave nothing to be desired. The secret of success is in feeding as near to nature as possible in the case of the Finch, finding out his likes and dislikes and treating him accordingly.

The most useful food-medicine, and one the praises of which all Mule breeders unite in singing, is the young dandelion leaf, or, later on, the seeding heads. Every effort should be made to obtain these, as their value cannot be overestimated.

The cocks for Mule breeding should be obtained or chosen from stock in the autumn, and receive special treatment during the winter. If obtained young, and if they become quickly steady, it does not matter very much whether they are field or house moulted, as the former will usually have settled down by the following spring.

(*To be continued.*)

IN-BREEDING:

WHAT IT IS, AND WHAT IT DOES.

A Treatise of the Greatest Interest to all Breeders of Live Stock.

BY

C. A. HOUSE.

Price tenpence, post free, from The Manager, CAGE BIRDS, 154, Fleet Street, London, E.C. 4.

Correspondence.

EVERY WEEK A PRIZE OF TEN SHILLINGS IS GIVEN FOR WHAT, IN THE OPINION OF THE EDITOR OF "CAGE BIRDS," IS THE BEST LETTER PUBLISHED UNDER THIS HEADING. THE LETTER MAY BE ON ANY SUBJECT; IT MAY BE A COMMENT, FOR OR AGAINST, ON ANYTHING WHICH IS PUBLISHED IN OUR PAGES, AN OPINION ON THE POLICY OF OUR PAPER, OR MAY HAVE NO REFERENCE WHATEVER TO ANYTHING WHICH HAS ALREADY APPEARED. SO LONG AS IT IS ON A "BIRDY" SUBJECT, AND IS ORIGINAL, IT WILL BE ELIGIBLE TO COMPETE FOR THE PRIZE.

The Prize this week is awarded to Mr. R. Blincoe, 169, Drake St., Rochdale.

Specials at Porth Show.

A Three Months' Delay.

Sir,—Kindly allow me a little space in your valuable paper, of which I have been a reader since its first number, to ask Messrs. Challenger, Legg, and Co. what has become of the special for best British bird at their show, also the prize cards? As I won the special, I am naturally interested. After failing to get a reply from Mr. Challenger, I wrote Mr. Legg, and this resulted in me getting a reply, saying "next week." So I have waited another month, which makes three months.

B. Robinson.

What is a Ticked Bird?

Do Away with Technical Points.

Sir,—There has been a lot to say as to when birds should be called ticked or marked, and to make it more easy to distinguish ticked from marked birds I should suggest a bird marked on any of its flights or tail feathers be called a marked bird, and a bird be called a ticked if it is ticked on both eyes, neck, or anywhere on the body, providing it is not marked on the wings or tail feathers. I should still stick to the even marked bird, eyes, wings, and tail, or eyes and wings. As to the classification, clears; not to show any dark underflue. Ticked birds; ticked anywhere, one eye or both eyes, or neck, rump, or head, providing there is no marking on wing flights or tail feathers. A bird to be called a marked bird if it be marked on one wing. An unevenly marked or variegated bird be one marked on wings, tail, and different parts of body. Foul marked bird; all dark, head, wings, and tail.

J. W. Fewster.

The Need for a National Tribunal.

Why the Cage Bird Union Failed.

Sir,—I note in one of your last week's letters that a correspondent advocates leaving Mr. Bastock's scheme of a national society to stand over till better times, and, while I quite agree so far as the final launching of the scheme is concerned, it seems to me that there is a great deal of preliminary work that might well be undertaken at the earliest possible moment. If we consider the principal causes of the failure of the late Cage Bird Union the importance of preparation work will be more fully realised.

One of the principal causes of this failure was the making of drastic rules with penalties which the Union had no power to enforce, and which were more inconvenient in some parts of the country than in others. For instance, the rule prohibiting showing under the Yorks Union rules while allowing their members to show at C.U. shows. This rule obviously but little affected most exhibitors who resided in the southern parts of the country, but strongly affected all who lived on the borders of Yorks., and caused no little criticism in this particular district. I hardly think this rule would ever have been instituted if delegates from the north had been given time to lay the matter before their societies.

This brings us to another weakness of a National Society that would require to be overcome, that is, the impossibility of finding suitable men with sufficient time on their hands to attend meetings with any frequency at considerable distances. The expedient of moving the meetings from town to town to give various members a chance was not successful; interest in the Union gradually dwindled away, and the rules were ignored with impunity by that class of fancier who can never understand that his individual interest for the time being should be subordinated to the general welfare.

So with a view of avoiding these and similar difficulties I would like to suggest a few of the things that might be done towards getting ready, and also with a view of stimulating discussion to offer a few ideas as to the lines on which such a national society should work.

First of all, would it not be possible to establish branches of the Union in all the principal towns to which all clubs in those districts might send delegates to discuss the affair from their local point of view? The branches later on could send their delegates to the main executive, but for the present each branch could be left to work up a Union for its own particular district, and might well be left to deal with purely local affairs permanently, so that the business of the head committee might be confined to matters of general principles or of wide importance to the fancy. This manner of working would keep up the interest locally, and not burden small societies with expensive railway fares and long journeys to keep in touch with things.

Then, again, it must be clearly understood that such a national society would have to move slowly at first, and carefully avoid making any rule that could not be enforced; they should remember, as one correspondent puts it this week, that societies can just as easily leave the Union as join it. The same applies to individuals with regard to their own particular club, and no society would be likely to risk losing members just to support the Union, particularly before it had really accomplished anything.

It would be better at first that such a Union should confine itself to attacking and criticising flagrant abuses, of which there are plenty, and to formulating an expression of opinion on matters of interest to the fancy generally, but leaving to the specialist clubs matters of detail which affected their variety only. For instance, in the discussion as to what constitutes a ticked bird in Norwich, the Union might well express their opinion that such a matter should be definitely settled, and could call upon the specialist societies involved to give their definition. It would be open for them to point out to the fancy generally anything they thought wrong, and to ask individuals to stand by them in boycotting any society, judge or person who refused to listen to reason.

If such a body were to move on these lines for some time, and were to be fair and just, and show that they were broadminded and well able to deal with any matter, they would in time acquire a great deal of power, and disputes would be voluntarily submitted to them, and many fanciers who at the present moment would insist on doing just as they choose in spite of anybody would hesitate to fly in the face of public opinion as expressed by a representative body of men who had the respect of the fancy generally.

Speaking of abuses, probably there is nothing so harmful to the fancy or discouraging to beginners as to have a generally accepted theory on which things are supposed to be done, and to carry it out differently in practice. This, in my opinion, is one of the most glaring abuses in the fancy to-day, and is done in quite a number of matters.

Take such a rule as appears on nearly every schedule, "Birds will be judged for purity of breed, etc." Does anyone who knows imagine this is generally carried out? On the contrary, we see at every show evidences of crossing that are palpable to anyone, and ugly monstrosities are sometimes put up because they have some one quality that appeals to one particular judge. Of course, I am not suggesting that no man should use a cross, but I do say that there ought to be no evidence of a cross in a specimen put down for exhibition, and when the absence of other equally valuable properties is ignored, the results are discouraging, particularly to those who have been attracted to that particular fancy by their admiration for a supposed ideal.

One could point out a good many other instances of this difference between theory and practice, but this will serve as an illustration, and a national society could by the mere expression of its opinion check such things considerably. It could even criticise any particular judge or any society who, in the opinion of its members, did not carry out its show matters in accordance with the schedule, and all this could be done without attempting to enforce its rulings by all sorts of penalties, which would only lead to rebellion on the part of individuals and the ultimate withdrawal of many clubs from the Union. On the other hand, when the Union had gained the confidence of the fancy generally, and had become firmly established, it would be able to deal firmly with abuses that refused to yield to milder treatment.

R. Blincoe.

The Castleford Linnet Club.

Is it Dead?

Sir,—As a member of the Castleford Club I would like to know if the club is broken up, or if it is possible to start it again. Some of the members have joined other clubs in the district, and they are helping to make them successful while their own is lying dormant. One of the Castleford members has won two years in succession a cup belonging to the club, and this year he cannot win it unless the club starts again. This, I contend, is not giving fair play, for if he could win it this year it would become his own property.

I am of an opinion that if they would arrange a meeting they could soon have the club going again; it only wants a little energy on some one's part to make a move. I have inquired of a few of the members, and they say they are ready to start again at any time. I trust this will meet some of the members' eyes and encourage them on a little.

A Member.

The Lanarkshire British Bird and Mule Club.

The Question of Standard Cages.

Sir,—Seeing that the above club are to have a meeting on Mar. 17, at 6, in Sloan's Restaurant, The Arcade, 100, Argyle Street, Glasgow, I think it is the duty of every British bird and Mule exhibitor who can possibly attend to do his best to be present.

Standard cages will be on view, and in my opinion this is a step in the right direction. There will also be other business very important to all in the fancy. I may say I am not a member of the club myself, as there will be a club started shortly in Glasgow, and I must give my spare time to the forming of it, but no matter how many clubs start we must be all unanimous in the fixing of the standard cage. By being present at the meeting fanciers will be showing at least that they are in sympathy with the Lanarkshire Club, and willing to help them in their endeavour to lift the British bird fancy to a higher standard.

Matthew Craig.

How to Grow Sunflower Seeds.

A Saving in the Seed Bill.

Sir,—Some time ago a reader asked for the best way to grow sunflowers for seed. As a working gardener and bird fancier I will give a few hints, as I think sunflower seed is quite equal to hemp for feeding purposes, and can be grown at home.

To grow large heads, a deeply dug, well manured soil and sunny position are essential. Dig and manure ground at once, and if you cannot get farmyard manure, put on a good dressing of fowl manure if you can get some.

About the end of March, or the first week in April, stretch a line across the site and put in two seeds at 1½ feet intervals. If you decide on more than one row, make the next rows 1½ feet from the last, and arrange the seeds so that they come between the two in the back rows, thus— : : : : : :

If you cannot spare separate ground, and have a flower border, dig holes at intervals at the back, put in some manure, and fill up, putting two seeds at each place, as they are quite ornamental when in bloom. If you have neither of these positions, they will form quite useful heads in any odd position, if they get a little sunshine.

When well up, pull up the weakest plant, leaving one in each position; these thinnings can be transplanted elsewhere if you have room.

Another plan, and the best to my mind, is to sow the seeds thinly at about the end of March in a box of good soil, and place in a sunny window. After the seeds are well up, give all the air possible to keep them sturdy, and harden off by standing under an outside wall for a week before planting out singly, which should be about the end of April. Whatever plan you adopt, water the plants well during dry weather, and give liquid manure occasionally.

When the seeds turn black, cut off the heads with about 3 inches of stem, and place them in a hot, dry place for a week or two, then shell out and lay them in a sunny position, safe from rain, until they ripen, which will be when they get quite hard; then store in a dry place.

If the plant stems are left standing they will break out again at the top, and you will get three or four more small heads of seed from each plant, but these should be used first, as they do not ripen properly. On no account cut the seed heads when they are wet, but choose a perfectly dry day, even if it means waiting a little longer. If readers adopt either of these plans they will be able to lay in a good stock of seed. H. Hood.

Our Prize Competition.

A Subject Suggested.

Sir,—Referring to your editorial offer in last week's Cage Birds of prizes for ideas, I think a little information from your numerous readers as to whether in Mule breeding it is better to pair the hen Canary with a cock Canary for first nest or wait till the finch is in breeding condition would be greatly appreciated by novices like myself. So far I have always found a difficulty in getting the hen to pair with the Goldfinch when I have let her run with a Canary for the first nest, especially if the cock has been in the same room when the hen has been transferred to the finch.

Novice.

Oxalic Acid for Killing Red-mite

A Difference of Opinion.

Sir,—I hope we are not taking up too much of your valuable paper on this subject, but I should like to reply to "Old Helpmate's" letter in Cage Birds of Mar. 3.

I have never found oxalic acid make lime-wash boil, and to experiment I have just mixed a small half-bucket of lime-wash, and added a breakfastcupful of dissolved oxalic acid, and it made no difference; it did not even take the chill off. If you put some in water with washing soda it will boil.

I once thought I would like to make the wash a bit blue, so I dropped a bag of blue into a jug with some dissolved oxalic acid in, and it boiled and fizzed terrifically. Dissolved alum added to lime will also make it boil. When redoing cages, if you use dissolved oxalic acid by itself with a soft brush for levelling the old lime-wash down, it makes it froth. These things I know, for I have tried them.

When I first used oxalic acid I said to my wife and a brother fancier that I would kill the red mite or the birds. The red mite is killed, and the birds that were living then are living now, and are in good condition. To prove it, look at the report of Sale Show in Cage Birds, Feb. 24, Yorks Yellow, also Manchester Joint Club Show, Feb. 10, and Openshaw and Gorton C.B.S., published Feb. 3rd. I live in the midst of chemical works and iron works, and I have been breeding four years, and my birds have never had green food. I am only a novice still, but rather an old one. Theory does not always work out right. What does Mr. Clayton say?

G. J. Beddall.

A Linnet Tamed in a Day.

Sir,—I think it would be interesting to you to know how a fresh, very unsteady Linnet was quieted in one day. I bought the bird at a bird shop, where it was in a large flight wildly flying backwards and forwards. I noticed his breast ruddy, and knew it for a fresh caught bird. However, I bought him and placed him in a tiny cage, next to a breeding cage of Canaries, in our living room. He seemed very miserable, first hopping and struggling and fluttering against the wires, and on any notice being taken he would immediately settle on the floor of the cage, so as not to be seen.

It rather worried me, as I love birds to be happy. "Poor little thing," I remarked to my little daughter, "he does so want to be out." "Do let him, mamma," she kept on saying, so at last, to please her, I placed the cage on the table and opened the door. Out he flew, round and round the room, and at last settled on the top of the curtains. We sat very still and took no notice, and presently he dashed at the windows, and, finding no foothold, flew on to a sewing machine standing in the window. The sun poured on to him (we have had a little sun here, notwithstanding the frost, especially at Mitcham), and in a moment he shook himself and commenced his chattering, giving some beautiful clear notes. He was happy, so I allowed him to remain as long as he cared, and was rewarded by his sweet song.

After about an hour he flew back to his cage for a feed, came out for another hop round and sing, and finally went in for good. Although I did not trouble to close the door, he did not want to be out again. I left him nearly three hours like this, and finally closed the door, as it was getting dusk.

Next morning, on opening the door of the cage, he did not fly out for a little time, and then just gently on to the open door, then to the top of his cage and near about, giving vent to his satisfaction by a series of sweet notes.

I am very keen on birds, but, unfortunately, owing to the war, I have been obliged to give them up for a time, as I have been nursing, but I am pleased to say I am able to start again. Cage Birds has always helped me, and I take it regularly. I have been very successful in the breeding season.

(Mrs.) L. Thompson.

CORRESPONDENCE.

(Continued from page 155).

A New Roller Canary Club for London.

A Roller Canary Club, affiliated to the British Roller Canary Club, for Roller Fanciers in London and District, is about to be formed. A meeting is being arranged, the time and place of which will be duly announced. Interested fanciers please write for particulars. This is a preliminary notification. A full and complete statement will be issued as quickly as possible.

J. Aspinal.

50A, Dagnan Road, Balham, S.W. 12.

The Disqualified Hawfinch at Bristol.

Mr. Birch was Not Consulted.

Sir,—I had decided not to write on this matter again, owing to the very personal remark with which Mr. Andrews closed his last letter. Such remarks may be thought clever, but they are not gentlemanly, and do not promote good feeling.

Mr. Johnson should be sure of his facts before he joins in discussions. No one has said Mr. Birch was consulted by me, and I certainly deny the insinuation that he was asked his opinion. Mr. Birch was at Bristol; he saw the bare skin as I saw it. Anyone, pigeon judge or not, with good eyesight, could see what I saw, and what I know Mr. Birch saw.

C. A. House.

Cage Making for Discharged Soldiers.

Some Practical Hints Desired.

Sir,—As a bird lover I note with pleasure that you are again offering in Cage Birds a weekly prize of 10s. for the best letter on bird lore which appears in its columns. Competition is at all times the best means of bringing out ideas which, perhaps for lack of a stimulus, often lie dormant, and all genuine bird lovers welcome any information which tends to the well-being and happiness of their pets.

In some of the back numbers of Cage Birds articles appeared on the capture of the Canary trade from our enemies, the Huns, and it was suggested that many of our wounded soldiers might take up the breeding and training of these birds as a source of income.

This is a splendid idea, especially if they could be taught the kindred trade of cage-making. Cages, like the birds, have hitherto been in many cases made in Germany, and it is time that everything German was wiped out in this country. Many of our Tommies are extremely handy, and with a few hints and designs from your practical readers could soon learn to make the cages and supply them with the birds they breed. At the same time this would afford them a means of livelihood in the off season.

(Mrs.) M. A. Sikes.

The Posting of Schedules and Catalogues.

To Facilitate Receipt of Catalogues.

Sir,—A couple of months ago I had intended writing and giving a suggestion about the sending of show catalogues. This season has been particularly bad. I do not know whether to blame the show secretaries or the Postal Authorities. In every case I had received my birds back before the catalogue came. Sometimes it was two days late, sometimes more, and several times I had to write and ask why it had not been posted. Showing loses a lot of its glamour in this way.

I would suggest that this season the catalogues are placed by the stewards at the time of packing in the hampers or boxes of those exhibitors who have ordered them. A red gummed label bearing the word "Catalogue" could be sent out with the numbers and labels and affixed by the exhibitor inside his box.

Now for the schedules. Up to the present the exhibitor has been in the habit of sending a penny extra for his catalogue to be posted to him, whether he gets it or not, according to luck. This time the exhibitor could send a penny stamp when applying for a schedule, and I would suggest the schedule being put into an envelope and posted as a letter. I think, too, in the long run it would save the secretaries a lot of trouble, as it must be simpler to put a catalogue into a box and a schedule into an envelope than to enclose catalogues and schedules in wrappers with two lots of stamping and addressing.

Of course, these are only roughly worked out ideas of mine, and no doubt other readers will think of better solutions. If they can I hope they will let us all have the benefit of them through the medium of Cage Birds.

W. F. Lloyd James.

The Wanderings of a Starling.

A Ringed Bird Identified.

Sir,—I am much obliged for your letter of March 2nd, drawing my attention to the letter in Cage Birds reporting the capture of a ringed Starling at Redruth. This bird was originally marked as a nestling with ring 41085 on June 20th, 1913, at Bradfield, near Reading. It was again caught at the same place on Feb. 8th, 1915, and the ring replaced by No. 83837.

H. F. Witherby.

Early Roller Canaries.

Two Nests Already from One Hen.

Sir,—I have three young Canaries, hatched Jan. 26, and the mother of the three has just hatched four more out on March 7, and they are all doing well. I have two more sitting, their time being up on March 14, and each of these are on three eggs. These are English bred Rollers; the cock birds are ten months old, and brothers, and the hens are two years old this spring.

Mr. J. Lovatt.

The Value of Milk in Colour Feeding.

Sir,—I am sending a few lines on colour feeding which I hope will be of some use to brother fanciers. During the last two years I have had some remarkably high coloured birds, and my methods have been as follows: I start giving my young birds the feed when they are seven weeks old; first of all soaking the bread or biscuits, whichever I am using, in hot milk. Then I squeeze it nearly dry and add the colour feed and a little sugar. I use all cold feed, no hot, and I start on half the quantity of colour feed for about a week or ten days; then I gradually get them on to full strength, and I find this has a remarkable effect in bringing the colour through. Milk is a fine thing for anything; it keeps birds in good health and vigour, and they will always eagerly take it. I give them also a small piece of sulphate of iron in their water once a week.

A. J. Abel.

An Appreciation of the Correspondence Columns.

Can Colour Feeding be Dispensed With?

Sir,—I was pleased to find you are again opening out your correspondence on birdy subjects. As a reader of Cage Birds for the last four years, I consider that the last competition formed one of the most attractive features of your valuable paper. But I do think we novices are apt to take the kindly advice and information we gather from your correspondents on the management of our stock as our just reward, without any word of encouragement to the writers to show our appreciation of their kindly act. It is this feeling, though feebly expressed, that prompts me to write these few lines.

I am looking forward to the seasonable hints to be given by Mr. Morse, as I consider it a very timely subject, and I am sure there are many working fanciers who will be pleased to learn the art of reducing the cost of the seed bill during the period of excessive prices. I have often thought when in the country that there must be food of a valuable nature amongst the wild plants. We often hear of certain plants such as plaintain, shepherd's purse, knap weed, and the like being valuable for birds, but unless the novice is able to recognise these when he sees them, it is a waste of time to give him names only. That is where the descriptive article of Mr. Morse will be so helpful.

I remember in the latter part of last summer being in the country, and while walking down by the water side casually coming across a cluster of dark things on the end of a long stem. I plucked one to find in the pod a lot of nice ripe seed. It was some time before I learned it was a plant commonly called hard heads, and I can assure you I did not return without gathering some for my birds.

One other matter I should like to speak of, that is, the colour feeding of our birds. On all sides we are asked to economise. The working man fancier finds certain seeds necessary to the welfare of his birds, and the cost is treble what it was in pre-war days. Why then this rage for colour feeding birds for the show bench, apart from the unnecessary expense and labour to make them appear what they are not? We see so much which is unreal and unnatural in life that to see our cage pets made the unconscious victims of the same process brings me no sense of pleasure. The Border Fancy, in its natural colour, is a thing of beauty, and evidently gives satisfaction; why not the other varieties of Canaries? At any rate, to see colour feeding dispensed with during the present strenuous times is the wish of your humble servant.

John Paris.

The Scotch Fancy Canary.

Can it be Made More Popular?

Sir,—If Mr. Dix had read my letter more carefully he would have saved me writing, as I had intended not to trouble you again. What I said was that one never saw Scotch Fancies that were *not* good enough to exhibit, the word not making such a difference. I am not so foolish as to expect any man to sell his exhibition birds at 15s. each, but, as I said, all Scotch Fancies are not bred to that standard, and surely the breeders do not expect top prices for the culls, which would be good enough to breed decent songsters from.

If I fancied such a bird as the one drawn by Mr. Norman from the sketch of Mr. Dix I should expect to pay ten times such a sum for it, but what would Mr. Dix have called such a bird, say, thirty years ago?

I believe there are still a few breeders of the true "bird of circle," and though they know it would be useless to show the same now they still stick to the old stock. Perhaps some of them will send a sketch so that we can see what a difference there is between the old and the new.

Yes, Mr. Dix, that little word "if" of yours is the real trouble. If we could all find the money we could then afford good stock birds. I did not enter this discussion with a view to getting valuable birds for almost nothing, as Mr. Dix seems to think, but solely for the purpose of helping to make the Scotch Fancy Canary more popular, if possible. I am always ready to pay full value for anything I buy through Cage Birds. Several of the best breeders of Yorkshires have supplied me several times, and I am pleased to say that when told what I wanted and the price I wished to pay they have all treated me well, and only once have I made use of the deposit system, in about ten years of dealing with readers of Cage Birds. Before then I had not heard of such a journal, but had a poultry and cage bird paper instead. I need hardly say that since then I have never missed a copy. I have little time for writing, so this, I trust, will be my last letter, but I hope others better fitted for such work may help in making the Scotch Fancy more popular.

Bird Fancier's Son.

The Federation of Roller Canary Clubs.

The Federation and Outstanding Clubs.

Sir,—Mr. Hill has put forward a splendid suggestion re submitting the "drastic" rule to all the newly Federated clubs. I welcome this, and am fully prepared to loyally abide by the decision. Is he prepared to do the same? For his benefit, I had better say a crowded meeting sanctioned the rule at Leeds.

The "liberty of action and British freedom" from one who was "against the reform being taken out of the hands of the British Roller Club" sounds exceedingly strange to one with an intimate knowledge of Roller affairs. Probably Mr. Hill would care to answer the question put to Mr. Willows re the ruling committee of the British Roller Club.

I must point out, too, that the Federation stands for no clique, but the majority of the clubs in the British Isles. The two outstanding clubs would not even condescend to discuss the question of Federation. I myself wrote a letter to Mr. Norris twelve months ago, practically begging for this question to be discussed, even if his club did not federate, but the only reply I ever noticed was one in Cage Birds, "wherein further secessions would be notified as they occurred."

In conclusion, I ask the Federated members in discussing this "drastic" rule to remember they are now a powerful body, each individual about to use a vote he did not possess under the old regime; be true to yourselves, and protect your rights as Britishers, and since you have been asked to declare for "Liberty" and "British Freedom," declare for it right manfully, and your answer is certain.

A. Montague.

Running with the Hare, Hunting with the Hounds.

Sir,—Please grant me the privilege of saying a few words in reply to Mr. H. G. Hill's letter on the Federation of Roller Canary Clubs. He states that he is a member of the Birmingham club, which has decided by a majority of its members to become affiliated to the Federation, and to abide by the Federation rules, and also says he is a member of the Midland R.C.C., which ignores the Federation entirely. How thus can Mr. Hill honestly remain a member of both clubs?

Does he want to uphold the Federation with one hand, and try to pull it down with the other. The Federation is too strong to be influenced by one club, and I am afraid Mr. Hill will have to choose one way or the other; he cannot have both the toffee and the halfpenny.

I consider the rule to which he refers a good one, but perhaps Mr. Hill forgets what action the Midland and the British Roller Canary Club have taken of late years. Have they not debarred all birds out of their young bird classes that were not rung with the B.R.C.C. rings? I can tell Mr. Hill of one club in particular that decided to allow birds to be exhibited with either B.R.C.C. or P.R.C.C. rings, but the B.R.C.C. refused its patronage unless the young bird classes were confined to birds wearing B.R.C.C. rings. Some of the members of the said club were also members of the B.R.C.C., but I suppose they were of no account. I did not hear much whining about it in this part of the country anyway, but it appears directly some other people get a touch with the same brush they begin to cry out. I only hope that the rule will be allowed to stand, and I appeal to all federated members to vote in favour of its standing.

R. Barnett.

The Position of the Midland R.C.C.

Sir,—Mr. Montague practically admits that what I said in my last letter was substantially correct, but in doing so introduces a few remarks to which I should like to reply with your kind permission.

The first is that if I write from now until the crack of doom I should be unable to get round the fact that the said rule is not in operation until next show season.

I will try to prove to all impartial fanciers that the rule is in operation now, although there are no shows at which the Federation can openly use the boycott. I received a private letter from the Secretary of one of the clubs soon after they joined the Federation, in which the following passage occurs: "The feeling of members seemed to be they would only be able to show at three shows if they remained loyal to the British Roller Canary Club." Another club wrote to our Secretary, asking us for our support at their show, and said that they had been threatened with a boycott, and asked us to help them all we could, so that their show would not be a failure. I may say our members did give them a good entry, but since then I notice they have joined the Federation.

Of course both these clubs have a perfect right to join the Federation if they wish, but does it not show that the rule is in operation now? As Mr. Tomlinson said in his article, they are being lashed into it through fear of the boycott next show season.

I may here say that there will be more than two shows held next season—not under Federation rules (that is if the exigencies of the war permit), and fanciers using B.R.C.C. or Midland rings will get a good run for their money.

I must draw Mr. Montague's notice to the fact that he used the word "We," meaning the Federation, and not to mean the Leeds club. Surely he does not want us to believe that the Federation now means the Leeds club only?

It is astounding that in his first letter he was so proud to write as a free lance, having resigned from this Leeds club, which, of course, meant resigning from the Federation also, and in your report to-day under club reports he asks for his resignation to be withdrawn. It looks uncommonly like a planned job, for which there certainly was no need, surely a man can defend his club or federation without first resigning.

Lastly, Mr. Montague declines to answer my last paragraph re the British Roller Canary Club. He knows he cannot, because what I said was correct, the Federation members wish to oust the B.R.C.C. from its position as the premier club, and take the management themselves, and are prepared to go to the length of a boycott to obtain their ends.

I was pleased to see Mr. H. G. Hill's very sensible letter in Cage Birds of March 10. He for one does not intend to be tied down by what a handful of delegates may do or say. I admire him for his pluck in saying so, and hope other high minded fanciers will stand with him in demanding their right to show where they wish. All such fanciers will be given a hearty welcome in the Midland Roller Club, unfederated and free. Once more I thank you for the use of your columns.

J. H. Willows.

(Correspondence continued on next page.)

ALL JUDGES AND SHOWS SHOULD USE OUR
specially prepared and up-to-date
JUDGING - BOOK.
The advantage this book has over others is that it has 3 columns for awards, and is therefore a great help to, and a double check for judges, while there is always a slip free to be sent to the printers of the catalogue.
Prices:—1 Copy, 6d. post free.
6 Copies 2/6 post free.
12 Copies 4/6 post free.

CORRESPONDENCE.

(Continued from page 156.)

A Club for Tonypandy.

Sir,—I have been approached on the possibility of forming a Canary club for Tonypandy, to include Clydach-Vale, Llwynypia, and Trealaw, making Tonypandy the centre. Fanciers interested, and intending to become members, will oblige by sending me their names and addresses, or call and see me, and I will do my best to get a meeting together at the earliest date.

W. R. Williams.

57, Brooks Street,
Williamstown, Penygraig.

The Song of Hen Birds.

And Standard Cages for British Birds.

Sir,—I have been a very interested reader of your valuable paper, Cage Birds, while in Flanders, and I now take the pleasure of writing you a few lines dealing on the correspondence page of Feb. 24 issue. As I have shifted from hospital to hospital, I have unfortunately lost all the issues sent me, and am anxiously waiting this week's to arrive.

The first question asked is whether one can be deceived by the song of the hen Linnet in captivity. I certainly say Yes, for I was, and very much so, as I tried to obtain hybrids from the supposed cock Linnet and a hen Goldie. It was only the singing that made me pair the Linnet to the hen Goldie, for it was a very small, insignificant looking creature, and yet had a song that could beat some of my cock birds into fits. It was just one of the freaks that is palmed on us by Nature.

I was pleased to see from the report of the sec. of Lanarkshire British Specialist Club that we have at last something concrete to stand upon in the way of cages for British birds. It used to give a fellow the *pip* to see some of the fantastic shapes and sizes of cages used to exhibit that lovable little finch, the Redpoll. I hope all this is past now, and when one goes to the shows his eye will be at once attracted by the neatness of the cages and exhibits.

Goldie-Canary.

The New Bell Glucke.

Bell Gluckes, Water Gluckes, and Hollow Gluckes.

Sir,—With your usual kind permission I should like to say a little more about this tour, for I have reason to know that there are others besides experienced Roller fanciers watching this correspondence, fanciers joining our hobby, and others not so well versed in the song tours. Others are asking why the divergency in our views of certain tours, and to such an explanation is due.

There is, or should be, no two opinions in defining a clear or distinct rendering of any tour or roll. To draw a comparison everyone must have noted differences in the human voices; some people are clear and distinct, and there is no misunderstanding what they are saying; others will not be plain; in fact, what one might call a mutterer.

Such mutterers will be found in our birds. Whilst they will sing some of the song passages clearly and distinctly, one or more of the others may be neither one thing nor the other. It is well known that some persons are more observant than others. They heed little details that would pass by a less observant person unnoticed.

In reply to Messrs. Willows and Montague on the new Bell Glucke Tour, I admit at the outset that I am not infallible. I may have made errors, but they have been committed unwittingly. It is not very encouraging after writing and describing that Bell Glucke in an article for these two gentlemen to opine it is either a Water Glucks or Hollow Glucke.

In conveying my respects to them, and the respect due to their opinions, I must say emphatically that the tour I described, and that I have judged and given points for, is neither the Water nor the Hollow Glucke, but a Bell Glucke. It is a double tour, and one of the component parts (if I may use the word) is a Bell note, sung in a more or less distinctive manner. The lower tour of the two is the Hollow (bass), or dry Glucke. These names are used in different parts of the country to distinguish the Hollow from the Water Glucke. They would, amongst experienced fanciers, also be used to describe the various shades of voice tones as sung by any particular bird.

This Hollow Glucke portion of the Bell Glucke is generally sung more quickly than the slower beat of the "old time" Hollow Glucke tour that I was acquainted with. I say acquainted with advisedly, for the Hollow Glucke I knew, and have owned for a matter of eight years, has been the more slowly delivered one; to draw a comparison, say, in the time of a set of flute notes.

The quick delivery of the Hollow Glucke in this new Bell Glucke does, in a small measure, feature somewhat the "old time" Hollow Water Glucke, yet to an acute and experienced ear there is a difference. The beat or downward "thump" of the voice in the "old" Hollow Water Glucke was not so deep as this Hollow Glucke of the Bell Glucke. Further, it was timed more quickly; again there was, and is to this day, a watery intonation prolonged throughout the Water Glucke, and this watery intonation is lacking entirely from the Hollow Glucke of the Bell Glucke component.

I do not know whether Mr. Willows forgets that all the birds coming from the breeder's room in which the tour originated do not sing a Bell Glucke. Just one case in point to substantiate this. I have had to hear, at my own leisure, a cock bred in 1915, direct from these rooms. This bird did not sing a Bell Glucke, but brought Glucke Roll, and the quickly delivered Hollow Glucke, without any trace of Water or Bell.

I have to-day, among birds that I have bred, a hen that sings the slow type of Hollow Glucke, a cock with a distinct Water Glucke, and, in addition, the quick delivery of the Hollow Glucke. Two more cocks, Bell Glucke, bred on both sides, singing Water Glucke, also this quickly timed Hollow Glucke, yet there is a distinct metallic ring running through the tour

Crossing one type of singer, Hollow and Water Glucke, and influence from the Glucke of the Bell Glucke, is responsible for the first named cock; while influence from a Hollow and Water Glucke singer has led to the Bell of the Bell Glucke being so much nullified that it now exists only as a metallic ring.

I should add that these birds never heard a Bell Glucke singer, yet they began to produce a Bell Glucke so soon as they commenced to sing.

I make these statements, not in the way of free advertising, for I have nothing to sell, but to show that I am, I think, quite capable of discriminating between the Water, Hollow, and Bell Glucke. Further, if any of those interested care to call here they can see and hear the birds for themselves.

It might be of interest to our fanciers who are lovers of the Brown Linnet to know that I have had four fierce singing Linnets in company with these Rollers for the past two months, and there is no trace of the Linnet's song in the Rollers. But there is a time for all things, and as the Roller is imitative it would probably not be wise to keep Linnets with Rollers while the latter are under tuition.

Referring again to the Bell Glucke, I would like to refresh Mr. Willows' memory that even when "the musical Bell Glucke we all knew was given points on the judging standard," it was not then without its fault. I said to the Chairman whilst the meeting was in progress at which the tour was voted to the standard, that if the good tour is to receive points, then a space should be provided to penalise the faulty rendering.

I quite agree that a well delivered Bell Glucke is a lovely tour, that is, to anyone who cares for variety, and one of the best I heard was in Mr. Willows' room. Since then I have often wondered whether Mr. Willows was "pulling our legs," or that he actually did not know when the second member of our little party of three, who was, and is still, a Wolverhampton member, asked on hearing this tour, "Whose Glucke is that?" to which Mr. Willows replied, "I don't know whose Glucke it is," and I told them, so innocently, that it was a Bell Glucke.

This was prior to its being put on the standard, and the tour so captivated our second member that he commenced negotiations for the bird.

In spite of this good rendering its propensity to fault has been such that I have advised novices to beware of the tour. For which I have been lashed, and it has come to my knowledge that some are not overpleased that I do not find more Glucke Roll birds on the bench. Yet whether it pleases or displeases, in honesty of purpose I am not wittingly going to give points for this Roll to one that has a distinct water intone, which, in my opinion, constitutes a Water Roll, whereas a Glucke Roll is, and should be, dry.

With regard to my being baited at Wolverhampton, Mr. Montague can take my word that such was not the case. A Wolverhampton member casually made the remark, "The Federation have passed a rule so and so," to which I briefly replied, and said that I deprecated it; no more, no less, passed between us; with three classes, totalling 140 birds, there is no time for gossip.

Mr. Montague is, I know, a young and well meaning fancier, but like youth in many other respects, is inclined in the "drastic rule" to make haste too quickly, and now that we get his version of that rule, I wish to withdraw candidly my term of a "drastic rule." For it is one no longer, as fanciers can ring with two rings, and in the event of one of these ring being inconvenient they can cut it off. Mr. Montague can take it from me also that when a judge calls this Bell Glucke a Water Glucke, or as in Mr. Willows' opinion, a Hollow Glucke, that judge is up against something when he meets the bird that brings a clear Water Glucke, or a Hollow Glucke without any trace of the Bell, in addition to this Bell Glucke I have described.

J. Tomlinson.

Queries Answered

(1)—All questions must be clearly written in ink (or typewritten) on one side of paper, and conclude with either the correct name or a pseudonym.

(2)—The proper name and address in full of querist must always be written on a separate sheet of paper, and enclosed with the query.

(3)—Queries intended for different specialists must be written on separate sheets of paper.

(4)—Queries must not include or be included in orders for books, instructions re advertisements, or any other matter for publication.

(5)—The department to which the queries refer must be stated on the left-hand corner of the query.

(6)—Queries received during any week, up to the first post on Saturday morning, will be answered in the issue bearing date of Saturday in the following week.

(7)—If an answer by post is desired from our specialists, a postal order for sixpence must accompany any query relating to sickness of birds, or a shilling in ordinary enquiries, with a stamped and addressed envelope in either case. Dead birds must not be sent to the office (see Post-mortems).

(8)—All who desire letters of complaint written to advertisers must state grounds for doing so clearly and fully, and enclose a fee of sixpence.

(9)—All queries must be addressed to the Editor, "Cage Birds," 154, Fleet Street, London, E.C.4. Postcards are not admissible.

CANARY QUERIES

Answered by CLAUDE ST. JOHN

AILING CANARY.

R. C.—The bird is doubtless suffering from a chill which has upset the digestive organs. See that it is not exposed to cold direct draughts, and if kept in a room, such as a kitchen, where the fire goes out at night, where the difference between day and night temperature is often extreme, cover the cage over before retiring at night and remove the cover next morning. Keep in a fairly warm place, but whatever the heat let it be as equable as you can manage it. Every second day for a fortnight, in addition to the staple seed diet, give a morsel of bread the size of a hazel nut, soaked in cold milk, drained, and sprinkled with soft sugar, and on the alternate days give either a morsel of banana, boiled carrot, or sweet apple, giving preference to them in the order named. For three consecutive days add to the drinking water six drops of syrup of rhubarb and a crystal of sulphate of soda the size of a small pea, and after this give four drops of dilute sulphuric acid and six of tincture of gentian every second day for a fortnight. If bird is not quite recovered in a fortnight or so, please write again, repeating particulars, and I will advise you further if necessary.

MORE DETAILS.

New Reader.—(1) The distance of the cage from the window, whilst mitigating direct draughts, will not remove the effect of such sudden fluctuations of temperature as we have had of late, but your arrangements should be sufficient to attain the desired object. If you cover the side next the window and the ends when the bird settles down to roost, and the other side before retiring at night, it should be quite sufficient for all ordinary times. (2) Your interpretation of advice respecting the diet is quite correct. (3) Your method of scalding the rape will do very well, though ten or fifteen minutes would be all the better to allow it to remain in the water, and there is no necessity to dry the seed in an oven afterwards. Empty it from the sieve on to a folded towel, spread out a little, turn end of towel over it and gently pat it to dry off the superfluous moisture, then you may give it at once without any further drying. The seed sent is a nice sample of summer rape. (4) I never had the least difficulty in getting the ammoniated citrate of iron and quinine either locally or at any of the great Loudon stores, but if you find any difficulty in doing so, you may safely use the ordinary citrate of iron and quinine as a substitute. (5) Your interpretation of the advice re giving the medicine is also quite correct. (6) As you cannot easily alter the proportions of the seed mixture in the bulk I would suggest that you flick out most or all of the grains of linseed each time you are giving the mixed seed. This would be a comparatively trifling matter, and the millet could remain as it is.

HEN CANARY AILING.

W. E.—The bird has doubtless fallen a victim to the severe climatic conditions of late, though you might carefully examine the claws to see if any injury to them is the cause of her not being able to perch. Keep her caged alone for the present and in a quite warm place, but see that she is protected from cold direct draughts, and let the warmth, whatever the degree, be as equable as possible. If there is likely to be any very serious drop in the temperature of the place where she is kept during the night, throw a cover over the cage before retiring at night, and remove it in the morning, until the bird is quite recovered. Although a fair amount of heat will do most good, you need not overdo this to an extreme. As staple diet give a mixture of three parts canary to one part summer rape, and in addition to this give separately every second day a piece of stale bread the size of a hazel nut, soaked in cold milk, drained, two drops of cod liver oil emulsion on it, and sprinkled with soft sugar, and also a small pinch of a mixture of equal parts hemp, niger, teazle and broken groats, and on the alterate days give half a teaspoonful of scalded summer rape and a morsel of either banana, boiled carrot, or sweet apple, giving preference to the last three in the order named. In the drinking water, for three consecutive days and every second day for the rest of the first week, add 6 drops of syrup of rhubarb and a crystal of sulphate of soda the size of a small pea, and after this give instead 20 drops of Chemical Food in the water two days in every three for a fortnight.

GOING BARE POUND NECK.

H. M.—It is quite possible that the unusual coldness of present season may be responsible for the bareness, in which case it would probably remedy itself as soon as the weather becomes more mild and settled, but otherwise it is doubtful if it will disappear before next moulting season. First of all examine the cage carefully to see if there are any red mites pestering the bird, and if you find any take the necessary steps to eliminate them. Keep the bird in a fairly warm place, but let it be as equable as you can manage it, and you need not overdo the heat; so long as it is quite off the chilly side it will suffice. Every second day for a fortnight or so, in addition to the staple seed diet give a morsel of bread and milk slightly dusted with flowers of sulphur and then sprinkled with soft sugar, and on the alternate days give a morsel of banana or boiled carrot, and add to the drinking water ten drops of lemon juice and as much chlorate of potash as will cover a sixpence. Allow the bird to bathe freely in mild weather, and if there is any great area of bare skin you might well mix 20 drops of glacial acetic acid in a teaspoonful of glycerine and slightly moisten the bare place with a small camel-hair brush or the tip of a small feather dipped in this mixture. If you cannot procure glycerine you may substitute an equal quantity of quince mucilage, which any chemist will doubtless be able to supply.

MATING WHEN MOULTING.

Constant Reader.—Most emphatically; it is not only advisable, but quite essential, not to pair birds whilst they are moulting nor until the plumage is fully grown again. To do otherwise is simply to court failure. The moulting of your birds is undoubtedly caused by extreme fluctuations of temperature, either from the position in which they are kept or the unusually severe weather we have had this season, or it may possibly be due to a damp situation. In either case you should remove any or all of these exciting causes of the condition as a preliminary step towards treatment. See that the birds are kept in a fairly comfortable temperature, which need not necessarily be overheated, but should be as free as possible from rapid extremes of heat and cold and from direct cold draughts. Then, in addition to the staple diet of canary and summer rape, give every third day a morsel of bread and milk with two drops of cod liver oil emulsion on it and sprinkled with soft sugar. On the intervening days give first half a teaspoonful of a mixture of equal parts hemp, niger, white millet, teazle and broken groats, and next a morsel of banana or boiled carrot. In the drinking water, every second day, add six drops of tincture of gentian and four of tincture of steel. Continue this treatment until the feathers have quite ceased dropping, and do not mate the birds until three weeks later at earliest.

AN OCTAVE OF QUESTIONS.

F. W. M.—(1) Yes, your staple diet of three parts canary to one part summer rape is quite correct. All other seeds are best given separately—kinds and quantities as you will frequently see advised in these replies. (2) What you term a double breeding cage seems to be really a three-compartment cage. It is correct to keep the cock in the centre compartment, and there is no necessity to replace the wire divisions with wooden ones at this season, when the wire ones are most appropriate, to enable the birds to get on friendly terms before being run together. If both hens are equally forward when the season arrives for mating, you should run the cock with both concurrently—that is, change him from one to the other at mid-day each day, and when they have gone to nest confine him to the centre again, leaving the hens to hatch and rear the young by themselves. (3) You would find full details for feeding up for breeding in "Canary Breeding for Beginners," or see replies to "Leader" and "A Beginner (1)" in last issue. Begin to feed the cocks at once, and the hens a week later, and if in a normally healthy condition they should be quite ready for mating about the first week in April. (4) Yes, taken all round it is a decided advantage to remove the first three eggs of a clutch, replace them with dummies, and return them on the evening of the third day, so that all may start incubation about the same time, and reduce the variation in the ages of the brood to a minimum. (5) There is no real necessity to rest the cock after he has put one hen to nest before mating him with another hen. You may be guided entirely by the condition of the hens, and, of course, the cock himself. So long as the latter is in apparently good sound health and active, if the other hen it is intended to mate him with is in a forward condition and ready to start nesting when the one has completed her clutch of eggs, he may be mated again at once. On the other hand, if she is not very forward it will do no harm in any case to allow him to rest a few days whilst she is being fed up a little. (6) Yes, the hen should be left to hatch and rear the young by herself, and the cock kept separate by the slide until the young are about a fortnight old, or if the hen does not show signs of commencing to nest again, it would be best to keep him separate until the young are able to leave the nest, or at least sufficiently fledged to be placed in a nursery if it should be found advisable. (7) I take it yours is a three-compartment cage, in which case the slides should, of course, be on both sides, the cock in the centre compartment, when both hens are sitting. Whether you use wood or wire slides may depend upon the character and disposition of the birds. Some cocks in high condition would exhaust all their blandishments to tempt the hens to leave the nests and gossip at the wire slide, or start nesting over again, and whilst some hens are sufficiently absorbed in their maternal duties to ignore the temptation, others are not; therefore it is best to use the wire or wood slides according to the necessities of each particular case.

CANARY QUERISTS

should consult St. John's "Canary Breeding for Beginners" (7d.); House's "Canary Manual" (1/2); Gallye's "Yorkshire Canaries" (1/1½); House's "Norwich Canaries" (1/1); Weston's "Stock Book" (7d.); Dr. Clarke's "Septic or Bird Fever" (7d.); Norman's "Aviaries, Bird-rooms, and Cages" (2/3); Romsden's "Colour-feeding" (3½d.); "Seeds and Foods for Cage Birds" (1/2); or the "Nutshell" booklets (2½d. each): No. 5 "The Pet Canary," No. 6 "Ailing Birds and How to Cure Them," No. 9 "The Disinfection of Cages, Bird-rooms, etc.," No. 10 "The Roller," No. 23 "The Border Fancy," No. 24 "Green Canaries." All thoroughly practical and instructive. Prices quoted are post free, from "Cage Birds," 154, Fleet Street, London, E.C.4.

"Food."

THE GREAT NEW NATIONAL WEEKLY.

A practical journal which shows how to grow our own food.

The profitable rearing of Poultry and animals which help to fill our food bill is dealt with each week, and invaluable advice is given to those who have started to produce home-grown fruit and vegetables.

No one with a garden, large or small, should be without this wonderful penny-worth, and the small holder will find in it a veritable treasury of practical knowledge.

Every Thursday 1d.

Advertisement forms and specimen copy sent post free on application to "Food" Offices,

154, Fleet St., London, E.C., 4.

QUERIES ANSWERED.

(Continued from page 157.)

(8) This query is not very clear. You do not mention the age of the cock nor your object in wishing to mate him with a Roller hen. If song is your chief object, then the young from a Roller hen would undoubtedly be a good improvement upon the pure Norwich, but if size, colour, and fancy points is the main object, then you would certainly lose by mating with a Roller hen. It is rather too early to mate yet. The end of this month or beginning of April is the best time.

BREEDING QUERIES.

L. C. B.—(1) Almost any of the well-known brands of egg food substitutes put up by good firms may be used quite successfully for the rearing of young broods. Many are certainly "good and reliable," but whether they are perfect substitutes in being quite as good as the orthodox food is a matter of opinion. Personally, I consider the freshly prepared food has too many advantages to be discarded lightly when times are normal. I should imagine you would be quite safe in relying upon the food you name first, which is very good. (2) No hard and fast rule can be made as to the number of hens which may be run with one cock to ensure fertility of the eggs when the birds are flying loose in an aviary. But about four is the limit I should care to risk in a general way. I certainly would not advise you to run nine hens with one cock. A much safer plan would be to run two cocks with ten hens, thus making up a dozen head of breeding stock. Assuming you can use only the one cock, then I would not advise you to exceed five hens as an outside limit, and only this number if the cock is a very robust, lusty one, and four would be better in either case. You may find something on this matter in the forthcoming CAGE BIRDS ANNUAL.

AN OLD FRIEND.

Borders.—The food you name has been used by many breeders as a substitute for the usual egg food with much success, and there is no reason why you should not do the same, notwithstanding the many and varied opinions you have heard. A comparison with the ordinary egg food, freshly prepared taken daily, as it should be, is scarcely a fair one. When circumstances permit I should always give the preference to the latter, but that is not saying that success cannot be obtained with these substitutes. See first part of reply to "E.C.B.," on the same subject.

A QUARTETTE.

Anxious.—(1) It would be quite feasible to run one cock with three hens and breed with them successfully, especially if the birds were flying together in a large flight or birdroom. Provided the hens are all in good breeding condition it is also quite possible to mate one cock with three hens consecutively in the same manner as is frequently described in these columns for running two cocks with one hen. But when the extra hen is added it is necessary that they should be in good condition and get to work quickly, otherwise the third hen will scarcely have finished her nesting arrangements before the first may be ready for him for the second round. (2) You ought to have said under what circumstances the birds are kept. I can only assume from your remarks that they are all in a large cage or aviary, separated from the cock only by a wire slide. If this is the case your best course to prevent the quarrelling you speak of would be to remove the cock to a cage by himself a little further away until it was time to mate them. Begin to feed up the cocks at once, as described to "Leader" and "A Beginner (1)" in last issue, and the hens a week later, and look out for the early sprouts of dandelion, which you may find in warm sheltered nooks, for the backward hens. The first week in April will be quite early enough to mate these birds. (3) No, you should not fix up nesting pans in the cages on the 17th March and then run the cock with the hens a few hours each day, etc. Wait until the hens are ready, which, as mentioned in No. 2, may not be before April, then you may put in the nest pans and introduce the cock, and let him remain until the hen or hens, as the case may be, have gone to nest, or permanently, if they are in a large flight. There is no necessity to move him about daily as you suggest, and the constant disturbance would do far more harm than good. (4) No, it is not right that it is not possible to breed successfully with a cock that does not sing. Although a cock in really good breeding condition should be, and usually is, in his fullest song. It does not necessarily follow that every cock that is not in song will not breed successfully if the bird is in good health and vigour apart from the lack of song.

FOR ECONOMY'S SAKE.

Novice, Birmingham.—In this reply last week the words "Powl food," in second line should have been "Fowl eggs." The meaning was, I hope, sufficiently obvious not to be misunderstood.

BIRDS PANTING, ETC.

W. D.—(1) Treat the hen that is suffering from loss of voice the same as advised in last reply for two or three weeks, and if not then quite recovered write again and repeat particulars and I will advise you further. (2) If the panting were due to overfatness this cause should be sufficiently obvious on handling the bird. If this were the cause the best treatment would be to cut down all extras of diet and keep on a quite plain regimen for a few weeks, and every second day for a week, meanwhile, add to the drinking water as much Epsom salts as will cover a sixpence, then miss a week, and repeat the same dosage again for another week. If the bird is not too fat try the effect of giving four drops each of oxymel of squills, ipecacuanha wine, and sweet spirit of nitre in the water every second day for a fortnight, and see that it is not exposed to any cold direct draughts nor rapid extremes of heat and cold. (3) I see no reason why the sample of biscuit food (chicken meal) you sent should not answer admirably to mix with egg in the preparation of the usual egg food for Canaries.

THE STOCK BOOK

Simplifies the operations in the Bird-room and makes it possible for everyone, even the veriest novice, to breed his birds as they should be bred. It affords facilities for the recording of the complete pedigree of all your birds; of your experiences during the season; an account of every bird reared. Contains also Pedigree, Breeding, Young Bird and Show Registers of simple and unique character; Cash and Profit and Loss Accounts for the year. Gives valuable hints for times of emergency during the breeding season.

Price 6d., from your Newsagent, or 7d. (postal order), post free, from "CAGE BIRDS," 154, Fleet Street, London, E.C. 4.

MOULTING AND SCRATCHING.

John Smith.—Keeping the bird in a wire cage hanging in the kitchen window is probably the real root of all the trouble. You should move the cage at once into a more favourable place farther away from the window, where extreme fluctuations, if not actual draughts, are likely to be very much in evidence. See that it is in a nice bright place, well aired, but not subject to draughts, and where the temperature is as equable as possible, and do not hang it near or over burning lights in the evenings, nor high up near the ceiling. Then well examine the cage to see if it is infested with red mites, and if you find this pest is present thoroughly overhaul the cage to exterminate them as a first step. In addition to the staple seed diet give a morsel of bread and milk with two drops of cod liver oil emulsion on it, and then sprinkled with soft sugar every second day for a fortnight, and on the alternate days give half a teaspoonful of a mixture of equal parts hemp, niger, white millet, teazle and broken groats, and give also a morsel of banana or boiled carrot. In the drinking water, for three consecutive days, add six drops of lemon juice and as much Epsom salts as will cover a sixpence, and afterwards give instead six drops of tincture of gentian and four of tincture of steel every second day until the feathers cease dropping.

SUBSTITUTE FOR GROATS.

T. R. W.—You should have no difficulty whatever in getting broken groats at any corn chandlers, or dealers in poultry and bird foods, though in some parts you will find them under the name of "grits." But if you fail you will find a very good and efficient substitute in either coarse oatmeal or crushed oats, allowing double quantity of the latter to allow for the bulk of the husks.

SAMPLE OF MAW.

F. H. Pink.—I do not find any trace of rancidness in the sample sent, which is a good sample of maw, and quite fit for use as a food for Canaries in the usual manner. It will be none the worse for being kept from last season.

VARIED.

W. Lowe.—(1) There may be quite a number of different causes of egg-binding, but among the commonest with Canaries are hens being generally weak and out of condition, inactivity of the lower portion of the oviduct, which fails to cover the membrane with the requisite shell, and sudden snaps of cold with dry east winds when the hens are about laying. The treatment you think too drastic is just the one that, judiciously carried out, might have saved your bird. In reality there is nothing drastic about it. You do not put the bird over really boiling water, as you seem to imply you believe was necessary, and the jug must not be full, so no water at all touches the bird; nothing but hot—not scalding—steam touches the bird, which will often relax the muscles and give immediate relief. Apart from this you should have kept the bird very warm, and given two drops of a mixture of equal parts brandy and syrup in the beak every hour or so, until relief was obtained or hopes lost, and a drop of oil on the vent once or twice during the day would have done no harm. Absence of grit is not necessarily a cause of the trouble, but a supply should always be provided when hens are breeding, and also a supply of cuttlefish kept accessible for the hens. (2) To give a detailed account of all the seeds and foods used, and their properties, would take up many columns of space which could not possibly be spared here, especially as it has been done more than once, and you could get the results altogether in the book "Seeds, Foods, and Wild Plants for Cage Birds," which our manager could send you for 1/2 post free. The seeds used in the regular dietary may be found mentioned in these replies practically every week. (3) As a mixture for a staple diet the one you sent is very good as mixtures go, being very judiciously proportioned, but the seeds are of rather second-rate quality, and the condition of sample suggests that there is rather a large amount of dust in the bulk. (4) This item simply relates a fact without asking any question. I cannot gather what it is you wish to know. The blue colour you speak of on the breast and belly may possibly be grizzled marking. Or as it likely that it is extraneous colour got from rubbing, perhaps, against distemper of this colour? (5) The same remarks may be applied here as to No. 2, and it is doubtful if a set of detailed symptoms could be evolved, or be of any real utility. (5 and 7) Have been replied to by post.

SWOLLEN EYES.

S. E. G.—The following treatment will allay the inflammation and help to reduce the swelling, but as there is in all probability a collection of pus in the orbital cavities, the swelling will disappear only when, or as this is absorbed or discharged. Keep the bird caged alone for the present, and in a comfortable temperature, but do not overheat it. Continue giving a morsel of bread and milk with two drops of cod liver oil emulsion on it and sprinkled with soft sugar every second day until better, but soak the bread in cold milk, and then let it stand to drain a little instead of scalding and squeezing it. On the alternate days give a morsel of banana, boiled carrot, or sweet apple. Get from a chemist a few camomile flowers and place a teaspoonful in a teacup, fill up with boiling water, cover, and allow to infuse beside the fire for an hour, then drain off the clear fluid, add to it 30 drops of tincture of opium, and bathe the bird's eyes with a little of this for a few minutes morning and evening, using a little fresh fluid and a fresh dossil of wool each time, and using the fluid lukewarm. After bathing absorb all surplus moisture so as to leave the bird as dry as you can. The hare skin will disappear when the swelling subsides. For three consecutive days each week for the next fortnight, you may add ten drops of lemon juice and as much Epsom salts as will cover a sixpence to the water, but no other medicine should be needed.

BRITISH BIRDS, MULES AND HYBRID

Answered by H. NORMAN

BREEDING WITH LINNET AND GOLDFINCH.

Beginner.—You should put up both your birds for breeding, providing they are healthy. Get a couple of hen Canaries and put them in with the Finches for one hour or so daily, to let them get used to each other. You can put them up together permanently at the beginning of next month. Two compartment breeding cages are the best, as you can shut off the cock bird when necessary.

GOLDFINCH WITH DEFORMED FOOT.

A. C. Lemon.—It is rather difficult to advise you about the foot of your Goldfinch without seeing the bird, although from your description I gather that at present he is unable to use two of his claws properly. If these were removed it would not interfere with his breeding, but if you decide to do it or have it done, it should be at once, so that he can get used to the loss before he is put up for breeding. I amputated the claws of a bird of my own, and found she was much more comfortable and took her perches better without them than before, and eventually she reared a nest of young ones. If it is done, care should be taken to remove at one of the joints; it may not be necessary to take off all the claw; if you can only leave one joint on it will be useful to him.

BREEDING HYBRIDS AND CANARIES IN AVIARY.

C. Oglesby.—If you were successful in getting young hybrids I am very doubtful if you would find the Lark food you mention good enough for them, but it might be if it had an equal quantity of a good brand of insectile food added to it. Canaries can be reared on a variety of foods from soaked puppy biscuits to the choicest egg food, and as your birds appear to be fond of the Lark food I have no doubt they would rear young ones on it in combination with seeds and green food. As regards the hemp seed, I should prefer to give it separately, then you can be certain of its quality, and also the quantity. Perhaps you can procure a brand of food that does not contain any.

MEALWORM BREEDING.

John Wilson.—I fear you have made a mistake in the management of your mealworm box. When the beetles died you should not have disturbed the contents, as before dying they lay eggs, which hatch out into worms, thus performing the natural cycle.—A fairly warm place is the best for them, although I have bred them in an outside building. Sorry I cannot give you the information you require about the stick insects; you had better have another try at the mealworms; follow the instructions carefully and do not disturb them until absolutely necessary.

BRITISH BIRD & HYBRID QUERISTS

should consult Houlton's great work, "Cage-Bird Hybrids" (7/6); Norman's "British Bird Manual" (2/3); or Part 1 "Hordbills" (1/1), Part 2 "Softbills" (1/1); "Aviaries, Bird rooms, and Cages" (2/3); "Seeds, Foods, and Wild Plants" (1/2); "Secrets of Hybrid Breeding" (1/2); Clarke's "Septic or Bird Fever" (7d.); "Colour-feeding" (3½d.); or the "Nutshell" booklets (2½d. each), No. 1 "Goldfinch," No. 2, "Linnet," No. 3 "Skylark," No. 4, "Song Thrush and Blackbird," No. 11 "Bullfinch," No. 13 "Chaffinch," No. 15 "Greenfinch," No. 22 "Siskin, Redpoll, and Twite," No. 25 "Small Insectivorous Birds," No. 26 "Large Insectivorous Birds," No. 6 "Ailing Birds and How to Cure Them," No. 9 "Disinfection of Cages, Birdrooms, etc.," No. 12 "How to Moult British Birds." All thoroughly practical and instructive. Prices quoted are post free from "Cage Birds," 154, Fleet Street, London, E.C.

ARE THEY BRITISH BIRDS?

Grosmont.—Neither the Roller nor the Ortolan Bunting can be properly classed as British birds, as they are only rare visitors, neither of them nesting with us. The Ortolan Bunting is frequently sold as a cage bird, and is easily kept, but is rather inclined to put on fat. Like all the Buntings, it prefers canary seed to any other, although it should be offered a little rape, maw, and shelled oats.

REARING MULES.

Novice.—Hundreds of Goldfinch and Linnet Mules are reared on the usual egg food as used to rear Canaries; this consists of hard-boiled egg chopped fine, or smashed up with a fork and about three times as much stale bread or biscuit powder mixed with it. The old birds are given this fresh twice daily, together with seeds and green food. After the young leave the old birds they are still fed with soft food, but the quantity is gradually diminished until they can crack seed for themselves; even then it is as well to give them a little occasionally, or soaked seeds.

IS IT A COCK BIRD?

A. Alford.—I can add nothing to my previous answer to your enquiry regarding the sex of your bird. When the weather is better hang him outside for an hour or so, and if, as I suspect, it is a cock bird, he will soon begin to get louder. When you hear the wild Thrushes sing you can then begin to think it is time yours did; it is all a question of temperament, feeding and treatment; some sing soon after moulting, others wait till the sun shines.

MANY QUESTIONS.

Hamilton.—(1) I should certainly say there is no harm in Hybrid breeding, and as a hobby it is one of the most interesting; and the crosses are as beautiful as any birds we have. I am sorry you should express a fear that we would answer you in a sarcastic manner. We have always recognised that all our readers are not experts, and we do our best to assist beginners and to answer their questions in a courteous manner. (2) Yes, the British hen can be used with a cock Canary, but it is not as a rule such a certain breeder. (3) A good light Mule will show its parentage equally as well as a dark one, especially to fanciers who know the crosses. The light ones are the most difficult to obtain, and therefore most valuable. (4) A pair of British birds put together now would be as likely to breed, if they took to each other, as a pair matched earlier. (5) In purchasing birds the buyer pays the carriage. (6) Birds are sent by rail in small boxes, they are despatched overnight and travel during their roosting time, and are usually delivered early in the morning.

FOREIGN BIRDS.

Answered by WESLEY T. PAGE, F.Z.S.

GREEN AMAZON DULL AND STUPID.

E. G.—You give me no idea how long you have had it, nor how you are keeping and feeding it, and in consequence I cannot help you as I would. Give it one teaspoonful of fluid magnesia in its drinking water every other day, so long as the voidings are not watery loose; if this occurs you must discontinue the magnesia till the voidings become normal, and then only give the magnesia once a week. On the days you are not giving the magnesia lightly colour the water with chemical food. Keep the bird in your warmest room, for a time at least, and cover it up at nights, but a small portion of the top of cage must be left uncovered for ventilation. While it is to be kept warm and free from draught, it must not be kept in a stuffy corner of the room. Give it a little honey and borax, lightly spread on bread, biscuit, or plain cake, or anything similar the bird will eat, once or twice a day. It is no use my giving a special dietary, as, if it is as I suspect, a newly acquired bird, a sudden change may not be beneficial. If you will give me more details I shall be pleased to try and help you further. There are many very talented Blue-fronted Amazons about, and others of lesser merit, and if yours is a talking bird it will recommence talking as soon as it has settled down and is in good condition again. I will refer to this matter when I hear from you further. I am keeping your query by me for reference.

AILING PARROT.

S. Jones.—I can help you but little till you inform me how you have been feeding and treating this bird. In the meantime give it three drops of castor oil, direct to the mouth, daily, till the bowels have been well moved. Also give it a little cod liver oil emulsion (twice a day), lightly spread on bread, biscuit, or plain cake, or anything similar the bird will eat. Keep it warm and out of draught, but not in a stuffy corner of the room. You should have written earlier and not have let the trouble become serious; two months is a long time for the trouble to run on. Upon receipt of the details asked for I shall be pleased to reply further.

BUDGERIGARS IN BIRD-ROOM.

W. F. R., Worksop.—I presume in your bird room you have a number of cages. If you can so arrange it, it would be far better to put up a flight for these charming birds in one corner of the room. This is easily done by covering the floor for a space of, say, 6ft. x 4ft. (as much more as you like), with linoleum, and enclose this with half-inch mesh wire netting stretched on light wood framing. Hang up six cocoa-nut husks with the openings towards the light, and suspend twiggy branches from the walls, and put in two pairs, procuring each pair from a different source. You will get infinitely more pleasure from your birds under these conditions than when kept in a cage, and sooner or later they would settle down and breed. Diet: Canary and white millet seed, and greenfood, a few oats, with continuous supplies of grit, cuttlebone, and water. The nutshell, "Budgerigars," 2½d. post free from our manager, is from my pen. You had better send for this, and after perusal query me upon any points not clear to you. The booklet will give you more information than is possible in this column.

FOREIGN BIRD QUERISTS

should consult Page's "Foreign Birds for Beginners" (1/1); Arthur's "Budgerigars and Cockatiels" (6d.); Arthur's "Parrots for Pleasure and Profit" (7d.); "Aviaries, Bird rooms, and Cages" (2/3); "Seeds, Foods and Wild Plants" (1/2); Dr. Clarke's "Septic or Bird Fever" (7d.) "Colour-feeding" (3½d.); or the "Nutshell" booklets (2½d. each); No. 6 "Ailing Birds and How to Cure Them," No. 9 "The Disinfection of Cages, Bird-rooms, etc.," No. 14 "Gouldian Finches," No. 16 "Avadavats," No. 17 "The Grey Parrot," No. 18 "Budgerigars," No. 19 "The Pekin Robin," No. 20 "Waxbills." All thoroughly practical and instructive. Prices quoted are post free from "Cage Birds," 154, Fleet Street, London, E.C.

BREEDING PARROTS IN A ROOM.

C. C.—Not many of the larger Parrots have been bred in captivity, and even of these the bulk have been bred more in a state of controlled liberty than actual captivity. Two or three things stand in the way of many attempts to breed this interesting group. They are noisy, and when excited not exactly the birds for a suburban garden aviary; also there is the difficulty of getting true adult pairs. (1).—Most female Parrots have the hook of the beak longer than the male, and the irides of their eyes are paler. With the Grey Parrot, the area of bare skin round the eye is somewhat pear-shaped at the back of the eye in the male, and round in the female. CAGE BIRDS published a coloured plate of a pair of this species, and you could get a copy from our manager for 6d. (2).—You should only attempt one species, and one pair in the same room or aviary, and you may have to wait two or three years for them to settle down, or if you happen to get hold of a couple of birds of a suitable age and fit, they may do so the first season. (3).—The normal dietary for the adults would have to be kept up, and in addition broken biscuits, boiled maize, soaked wheat and oats, and unlimited ripe fruit. The spring time is the best time to make a trial, but Parrots will not breed to order like Canaries. You must fit up your room and procure your birds and then await their pleasure with what patience you can. You must watch our pages for offers of birds, or you might advertise your wants; I cannot name special dealers. Yes, you could breed in a small room. If there is a fireplace this must be securely netted in, and all woodwork and the window must be covered over with small mesh wire netting. You must arrange along the sides of the room, reaching from floor to ceiling, limbs of trees, varying from 6 in. diameter down to 1 in. Leave the centre of the room open and hang up one or two barrels in retired corners of the room, with their opening to the light, where they can be reached by the birds from the branches. It is no use you attempting to breed such birds unless you are prepared to wait patiently for the development of events, for even with Parrakeets, which breed freely in outdoor aviaries and such rooms as you propose setting up; one often has to wait considerably for them to make the initial start. First fit up your room, then advertise for what you want, and insist on a guarantee that the birds are what you advertise for—you are almost sure to have to purchase them singly—birds four or five years old would suit you better than younger ones, neither should be older than six or seven years if you are to have a good run with a pair when you get them.

POST MORTEMS.

Mr. G. Yates, M.R.C.V.S., 1, College Road, Harrow, Middlesex, will examine and report upon dead cage birds for a fee of 1s. 6d. each bird; for reply direct, 2s. 6d.; analysis, 21s. The Post Office regulation is that bodies of birds must be sent at the letter rate of postage, and must be packed in hermetically-sealed receptacles which must themselves be enclosed in strong wooden, leather, or metal cases. If this regulation be infringed the packets may be destroyed by the authorities. **Any bodies sent to the office of this paper will be thrown away, and if a fee is enclosed the loss will be the sender's.**

GENERAL.

Answered by THE EDITOR.

GRAMOPHONE RECORDS.

Constant Reader, Redhill.—We do not know of any records especially made for training Canaries to sing. Kindly see Rule 2 as to names and addresses of querists.

WOOD, Medical Specialists, 20, Louis St., Leeds.

SUFFERING WOMEN

To prove the superiority of Zedex, prepared in dainty, tasteless tablets) over all other remedies, I will send a

1/3 BOTTLE FREE.

together with interesting book full of information on Zedex, and explanatory treatise by Dr. Andrew Wilson. Send three stamps to cover carriage and packing. Obtainable from all Boots' Branches at 5/- per package. Advice Free—MANAGERESS, ZEDEX CO., Hove, Sussex. Mention paper.

A POST CARD ONLY You cannot hold your own in life's battle if weak, worn, or easily jaded. Periodical attacks of moodiness, langnor, despondency, depression, and groundless fears mean nerve troubles and lead to brain fag, impaired memory, and unfits one for study, business or pleasure. The chosen ones in every walk of life are the alert, the bright, and the intelligent, nature's natural gift, but marred for lack of a little knowledge. A post card to the Useful Knowledge Publishers, P.O. Box 94, Bradford, will put you in possession of a 48-page book, neatly bound, of valuable information, and will be sent post paid free of any charge whatsoever if you will mention CAGE BIRDS. A little knowledge saves much medicine. [Copyright.

PIGEONS, HOMING & FANCY

Pigeon-keepers will find much helpful information in two of our "Nutshell" Booklets, Nos. 7 and 8, which deal with these birds in a manner which will set the fancier on the high road to success. No. 7, "The Homing Pigeon"; No. 8, "The Fancy Pigeon," post free 2½d. each from "Cage Birds," 154, Fleet Street, London E.C.

BOOKS ARE STAR SHELLS

THAT LIGHT THE WAY TO SUCCESS.

Our Handbooks Help Novice and Expert Alike.

CANARY BREEDING FOR BEGINNERS. By CLAUDE ST. JOHN.—An exceptionally helpful, intensely practical and instructive handbook for beginners and tyros at Canary Breeding. It contains 116 pages 7in. by 5in., and is profusely illustrated and contains innumerable hints helpful to all young bird-keepers. In this book the reader is instructed how to pair up the stock birds, how to cage and feed them, how to test the eggs, what to do when the young birds are hatched, and so on until the birds are old enough to be put on the show bench. It is interesting from cover to cover, and is by far the best 6d. handbook on the subject ever published. Price 6d., post free 7d. Cloth bound, 1/2.

AVIARIES, BIRD-ROOMS AND CAGES: THEIR CONSTRUCTION AND FURNISHING.—A practical, up-to-date guide on this most interesting subject; written and illustrated by "Cage Birds" artist-in-chief, Mr. H. NORMAN. It is fully illustrated with ten full-page photographic plates and numerous helpful sketches. Bound in cloth Gilt, price 2/-, post free 2/3; paper board covers 1/6, post free 1/8.

BRITISH BIRD MANUAL. By H. NORMAN.—Published in two parts—"Hardbills" and "Softbills." This latest and most up-to-date manual on British birds has been written and illustrated in colours, and black and white, by "Cage Birds" artist-in-chief, Mr. H. NORMAN. The author, who has made a life-study of the subject, gives in these volumes information and hints of the utmost value to all keepers of British birds. Part I., "Hardbills," deals with the Finches, their keeping, feeding, showing, etc.; and Part II., "Softbills," Blackbirds, Thrushes, Larks, Buntings, etc. Price 1/- per part, post free 1/1.

FOREIGN BIRDS FOR BEGINNERS. By WESLEY T. PAGE, F.Z.S., etc.—A most useful manual for all keepers of Foreign birds. It will be found indispensable information of an entirely practical nature—by a life-long specialist—on the keeping and feeding of the more common and popular varieties of foreigners. It contains illustrations in colour, and black and white, of some of the well-known species, and should be purchased without delay by all fanciers who go in for this most interesting branch of bird-keeping. Price 1/-, post free 1/1½d.

HOUSE'S CANARY MANUAL. By C. A. HOUSE.—5th Edition. A thoroughly practical guide to the general management and breeding of Canaries, dealing fully with the breeding, etc., of every member of the Canary family, including the Roller (or Singing Canary). An illustration of each bird, by the master Canary artist, Mr. H. Norman; exhaustive chapters on aviaries and cages, breeding procedure, moulting, exhibiting, diseases, and seeds—a compendium of knowledge. Price 1/-, post free 1/2. Cloth bound, 2/2.

THE SECRETS OF HYBRID BREEDING REVEALED AND EXPLAINED. By many notable Mule and Hybrid Breeders. Among the contributors are such well-known breeders as Messrs. R. Colton, W. H. Vale, C. Houlton, C. J. Ward, J. Beswick, G. Lander, T. H. Klnch, T. Smith, etc. This Handbook, which contains 212 pages, 7in. by 5in., is brimful of the most practical information on the highly interesting subject of Hybrid breeding. Being written by successful breeders, it is quite invaluable to everyone who would also be successful in his hobby. Price 1/-, post free 1/2.

THE STOCK BOOK, OUR INVALUABLE BREEDING ROOM REGISTER. Compiled by G. E. WESTON. The stock book which makes bird breeding easy. The book no breeder of birds can really afford to be without. Everything that a cage bird breeder needs to assist him in keeping his accounts is found in its pages. A large number of emergency hints are also given for the assistance of the fancier during the breeding season. Price 6d., post free 7d.

NORWICH CANARIES. By C. A. HOUSE.—The latest and most practical manual on this popular variety of Canaries. It tells the fancier all that he needs to know to enable him to become successful as a breeder and exhibitor of the Norwich Plainhead. The chapters on "Forming a Stud," and "How to Produce the Ideal," are worth the cost of the whole book many times over. Price 1/-, post free 1/1.

PET RABBITS, CAVIES AND MICE. By GEORGE GARDNER.—A complete and practical guide to the proper management of Rabbits, Cavies, and Mice. The information given in this handbook is thoroughly up-to-date, and deals with the housing, feeding, exhibiting, etc., of these popular pets. Many illustrations of champion rabbits, etc. Price 1/-, post free 1/1½d.

SEEDS, FOODS, AND WILD PLANTS FOR CAGE BIRDS. By various Leading Authorities. A comprehensive and complete manual on this most interesting subject. In it will be found information on the various seeds suitable for all varieties of cage birds, their food values, uses, etc. Descriptions and illustrations of the various wild plants that are indispensable to the successful keeping of all cage birds are fully given. Price 1/-, post free 1/2.

SEPTIC FEVER OR CANARY PLAGUE. By R. H. CLARKE, M.D., M.A.—A very useful booklet on this subject, which should be found in every bird lover's library. Dr. Clarke has given the subject of his book very special study. Price 6d., post free 7d.

Other Books obtainable from us—

BIRDS OF THE COUNTRYSIDE. By FRANK FINN, B.A., F.Z.S.—A handbook to the wild life of all our familiar British birds; their appearance and habits accurately described. With 12 beautiful coloured plates, and 118 photographic illustrations. A charming gift book. 5/4 post free.

PETS, AND HOW TO KEEP THEM. By FRANK FINN, B.A., F.Z.S.—Gives the correct method of housing, feeding, and managing every kind of pet; all sorts of animals are dealt with—monkeys, dogs, cats, lizards, tortoises; also gold and other fancy fish, while there is a large section devoted to birds. Contains many coloured plates and illustrations from photographs. Another charming gift book. 5/4 post free.

EGGS AND NESTS OF BRITISH BIRDS. By FRANK FINN, B.A., F.Z.S.—A most interesting Handbook for all lovers of British birds, containing coloured reproductions of 154 eggs from nature in 20 plates, and 74 eggs in half-tone and other illustrations. Price, 5/4 post free.

AVIARIES AND AVIARY LIFE. By WESLEY T. PAGE, F.Z.S.—An interesting manual devoted to the housing, feeding, and general treatment of Foreign and British birds, and details the various groups that can be kept safely together in outdoor and indoor aviaries; the best food mixtures, and an enormous amount of equally important matter in connection with the subject. Lavishly illustrated with photographs and sketches. Price, 12/6 post free.

BEAUTIFUL BRITISH BIRDS.

The Goldfinch and the Bullfinch are two of our most beautiful British birds. Either makes a charming pet, and hybrids bred between the two are certain of a high place in competition on the show bench. The Goldfinch in our picture won 2nd Prize at the show of the London and Counties A.C.B. for Mr. H. Bell, and the Bullfinch, owned by Mr. H. Checksfield, Rushden, took 2nd Prize at the show of the Clapham C.B.A.

F. CARL, Publisher, 154, Fleet Street, London, E.C., 4.

Advertisement Charges.

One Halfpenny for each word up to 48, 1d. per word afterwards. Name and address to be reckoned. Minimum, 12 words 6d.

IMPORTANT NOTE.—Two or more Advertisements coming from the same advertiser, even if sent in different names, are reckoned together, and are charged at two words a penny up to 48 words; after that 1d. per word. No single advertisement, even if accompanied by others, will be charged at less than the minimum price, viz., Sixpence.

Headlines or Footlines, 9d. 1/-, 1/6, 2/-, 2/6, according to size.

The rate for displayed advertisements is 7/6 per inch. Rates for a series on application.

ADVERTISEMENTS UNACCOMPANIED BY CORRECT REMITTANCE WILL NOT BE INSERTED.

Postal Orders must be sent as far as possible. All moneys should be made payable to F. CARL.

The Proprietor reserves the right to refuse any advertisement, or to cancel any advertisement ordered for a series, at any time, without assigning any reason for so doing.

Advertisements must in all cases bear the bonâ-fide name and address of the advertiser, and no advertisement will be inserted if addressed to a receiving office, or similar place of call.

Advertisements close Tuesdays first post in each week, and should be sent to the Advertisement Manager, CAGE BIRDS, 154, Fleet Street, London, E.C.4. Terms for Display Advertisements on application.

ALWAYS USE "CAGE BIRDS"

DEPOSIT SYSTEM.

We are not responsible for the statements made in advertisements, nor of the *bonâ-fides* of either buyers or sellers. In all transactions the adoption of our Deposit System should be insisted upon.

RULES.

1.—PROCEDURE.—The intending purchaser should send to this office the amount of the purchase (our deposit fee included), and at the same time he should communicate with the seller stating what it is he requires sent on approval. We acknowledge receipt of the deposit to both parties. In all cases the depositor should give his name and address, and also that of the vendor, and must write same clearly and distinctly.

2.—END OF TRANSACTION.—The deposit is retained by us until we hear from both parties that the transaction has been completed. If a sale has been effected, we hand the amount deposited to the seller. If a sale has not been effected, we return the amount to the depositor. The transaction must be conducted by the parties themselves. We merely hold the deposit.

3.—AMOUNT OF COMMISSION.—The fee is 6d. for each £1, or fraction of £1, and it must be sent at same time as the deposit.

4.—IMPORTANT POINTS.—The depositor must decide within forty-eight hours of the receipt of the goods whether he will keep or return the same, unless, that is, some other period of approval (of which we must be advised) is agreed upon by both parties. The depositor must at the same time notify us of the fact that he has returned the goods. If the goods are not returned within the said forty-eight hours, we reserve the right to send the deposit to the seller after the expiration of that period. And should the seller fail within three days to notify us of the receipt of his goods back again, the transaction will be treated as ended, and the deposit will be returned to the depositor.

5.—A SATISFACTORY PURCHASE.—When a transaction has been completed to the satisfaction of both depositor and seller, both parties must at once return the deposit receipts as a guarantee of its completion. The depositor must at the same time instruct us to pay over the deposit to the seller.

6.—GOODS ALREADY SOLD.—If the goods are sold before our deposit note reaches the seller, or if for any other reason he declines to do business, he must at once return the deposit note to us. Failing its receipt, we reserve the right to return the deposit to the sender after the expiration of three days.

7.—FRESH TRANSACTION.—In case no sale be effected, a deposit is available for purposes of a fresh transaction, provided another deposit fee be paid.

8.—GOODS IN TRANSIT.—Goods in transit are at the seller's risk, and any damage or loss sustained on the journey must be borne by the seller. But goods not approved of must be properly packed and returned by the same means as were used in sending the same.

9.—PAYMENT OF CARRIAGE.—The payment of carriage must be a matter for arrangement between the vendor and depositor. We do not undertake to settle disputes affecting questions of carriage. But in the absence of other arrangements the purchaser is liable for the carriage of the goods, and if the goods are sent on approval and returned, each party pays the carriage one way.

10.—DISPUTES.—In case of a dispute, the decision of the Editor is final.

IMPORTANT.

SEND THE FULL COMMISSION.—If the full commission does not accompany the deposit, the vendor will not be notified of its receipt until the amount deficient plus the extra postage incurred has been paid to us.

HOW TO REMIT.—Under no circumstances will Cheques or Post-dated Money Orders be accepted as deposits. Uncrossed Postal Orders must be sent and the numbers taken for safety.

DURING THE WAR

our customers may rely on our continuing to supply them at LOWEST POSSIBLE PRICES. Free delivery by own van London district. Carriage paid to any country station in England and Wales 1/- cwt. extra.

MEDICINES.

"AILING Cage Birds and How to Cure Them," "Nutshell No. 6." an account of the troubles which beset captive birds, with the treatment and list of medicines to restore our pets to health. This will save you much discouragement and money, and costs only 2½d. post free. From "Cage Birds," 154, Fleet-st., London, E.C.4. Or 2d. from agents (lists frequently published).

Not Singing

If you have any birds you are relying upon for the breeding season that have gone into Soft Moult, we Guarantee you a perfect cure.

DITCHFIELD'S TONIC DROPS

are a certain cure for loss of voice, soft moult, slow moult, going light, feather plucking, and inflammation of the bowels.

DITCHFIELD'S FAMOUS REVIVO

is absolutely unequalled for giving new life and vigour to the birds, and for producing that smart tight appearance of the plumage so much desired by all fanciers.

These two Medicines, given on alternate days, will bring any bird into breeding condition.

DITCHFIELD'S SPECIAL LUNG TONIC

the grandest medicines ever introduced for chest and lung affections in cage birds. Can be given with absolute confidence to the most weak or delicate birds. All medicines can be given in the drinking water, and the birds take them freely, with marvellous results.

All the above remedies are sold in 8d., 1/2, and 2/2 bottles; two 8d. bottles for 1/2, two 1/2 bottles for 1/11, or three for 2/8. P.S.—The 1/2 bottles are treble the 8d. size. All orders sent per return, post free.

FRANK DITCHFIELD, BIRD SPECIALIST, OLDHAM

KNOWLEDGE IS POWER.

You can get it in 6d. Vols.

READERS of "Cage Birds" can to-day secure at pre-war prices volumes of the well-known **"Everybody's" Series.** Each volume is, on its particular subject, the handiest and best book obtainable. Although small enough to fit one's pocket, each book is packed with a vast amount of valuable information. Consider the wonderful price—only **6d.** each (8d. post free), strongly bound in cloth; in attractive leather binding, **1s.** each (1/2d. post free). The number of these books is very limited, and owing to the enormous increase in the cost of printing and paper, it will be impossible to reprint them at present prices. There are sure to be some of these books that YOU need—some that will give you just the information you have been seeking on some knotty point. Send in your order **NOW.** It is only necessary to state the *Number* of each book as given opposite the name in the list shown here.

1. Everybody's Guide to Poultry-keeping.
2. Everybody's Guide to Carpentry and the Doing-up of the House.
3. Everybody's Home Dressmaker. (7d. only.)

(881)

IT IS NOT LIKELY

that the opportunity to get some of the best blood in Great Britain at less than their face value will occur again this season. Here is the reason for this special opportunity. Added to my already large stock of Crests and Crested-breds, I have purchased the entire stock of a gentleman **Breeder and Exhibitor. Note—NOT THE SURPLUS STOCK,** but the **entire stock.** I am quite prepared privately to supply name, and fullest particulars of any bird. These, together with my own stock, are offered at following prices: **Crested Cocks, 15/-, 20/-, 30/-** upwards. **Crested-bred Hens, 15/-, 20/-, 30/-, 40/-** upwards. **Crested bred Cocks, 12/6, 15/-, 20/-** upwards. **Crested Hens, 20/-, 30/-. Pairs, one Crested, other Crested-bred, 25/-, 30/-, 40/-, 60/-.** Cage for one, 4d., two 6d.: **W. RUDD, The Bird Specialist, NORWICH.**

Greens.

NORWICH Greens, yellows and buffs, from 10/- each; approval: Jenkins, 82, Church-st., Widnes. (746)

YORKSHIRES to spare, buff self hens, 7/6 to 10/6; yellow self cock, 17/-. Hooper, 142, St. Owen-st., Hereford. (883)

YORKSHIRE cock, grand stock bird, 25/-; also one at 15/-; cash or deposit. Turner and Roberts, Ripley, Derbyshire. (881)

Lizards.

FOR Lizards see my list. Rudd, Specialist, Norwich.

THE Lizard Prince offers grand 1916 Gold and Silver Lizard cocks, including winners Oldham, Manchester, Ardwick, Rochdale, 10/6, 12/6, 15/-, 17/6, 20/- and 25/- each, approval; inspection invited: John Rukin, 44, Hall Carr-rd., Rawtenstall, Lancs.

Readers are advised to use our Deposit System when dealing with Advertisers. See rules at head of small advertisements.

Make Your Breeding Pay in 1917.

This you can do if you only pair up right; or if you want to purchase pairs, leave it to me; for it is no trouble to me to produce documentary proof that the foundation of many past and present exhibition studs have been laid by birds purchased from me. Great value for money is my forte. I herewith give a few prices of exceptionally good

Norwich Plainheads and Yorkshires.

You may have all the so-called strains in the world, but you cannot purchase better blood than I now hold, and I am certain you cannot procure the same value. Cocks, 16/-, 20/-, 30/-, 40/-, 50/-. Hens 7/6, 10/6, 15/-, 20/- 30/-. Pairs 25/-, 30/-, 40/-, 60/-. These prices are for good birds to breed winners. They are the best value in Great Britain to-day. For **OTHERS,** really good, at lower prices, see my list. Cages for one, 4d., two or three, 6d.; approval with pleasure. Above prices relate to Norwich and Yorkshires.—**W. RUDD, Specialist, NORWICH.**

Norwich.

NOTICE TO READERS.

In view of the large amount of business done between our advertisers and readers, and to ensure satisfactory transactions, attention is directed to our deposit system, particulars of which are given at the top of first advertisement page.

Champion YORKSHIRES & NORWICH

Bulldog Strain.

NOW IS THE TIME TO PROCURE YOUR BREEDING STOCK, to ensure getting **the best birds,** and to get them settled in their new home before pairing up. I have an enormous stock of all varieties on hand, and, having almost finished my export trade for this season, I can now concentrate my attention to the requirements of the home trade. My long experience as a breeder and exhibitor, and the large stock of birds I have to select from place me in a position to send you just such a bird or birds as you require. As regards the quality of my stock, it is surely sufficient to refer you to the reports of all the leading shows, from which you will find that both my **Yorkshires** and **Norwich** are not only maintaining but adding to, their great reputation. In addition to this, I have sold several birds that have won leading honours at all the principal shows. Kindly write, stating wants. I am now offering a limited number of grand stock and exhibition birds, either Yorkshires or Norwich, which I can guarantee as bred from my own **Bulldog Strain,** at 20/-, 25/-, 30/-, 40/-, 50/- each, cocks or hens. Also a few grand matched pairs at 40/-, 45/-, 50/-, 60/-, 80/- per pair upwards. These are splendid value, and have only to be seen to be appreciated.

I have also a grand selection of stock birds from other well-known strains, as follows:—

YORKSHIRE COCKS, grand lengthy birds, in full song, 15/-, 17/6, 20/-, 25/-, 30/- each, upwards.

YORKSHIRE HENS, smart, racy, typical hens, 7/6, 10/-, 12/6, 15/-, 20/- each, upwards.

MATCHED PAIRS, 25/-, 30/-, 40/-, 50/-, 60/- per pair upwards.

NORWICH PLAINHEADS. Grand, thickset, cobby birds at same prices as Yorkshires.

BORDER FANCIES, Real good birds, both for stock and exhibition. **Cocks,** 15/, 20/-, 25/-, 30/- each. **Hens,** 7/6, 8/6, 10/- each. **Matched Pairs,** 17/6, 20/-, 25/-, 30/-, 40/- per pair.

CRESTS AND CREST-BREDS.—A few real good pairs at 30/-, 40/-, 50/-, 60/- per pair. **Odd Birds,** Cocks or Hens at proportionate prices. **Matched Pairs** for **Mule** or **Hybrid Breeding,** 15/- pair.

ROLLERS. ROLLERS. ROLLERS.

I have a magnificent collection of pure British Rollers from the best and purest strains, at following prices:—

HIGHLY TRAINED COCKS, 25/-, 30/-, 40/- each.
PURE-BRED HENS, 7/6, 8/6, 10/- each.
MATCHED PAIRS, 25/-, 30/-, 35/-, 40/-, 50/- per pair.
Travelling Cages, **4d.** extra in all cases.

One word more—**Please remember, I invite you** to come on any day but Sunday, and make your own selection, but if you cannot come, **Don't Forget** that I send every bird on 7 days' approval, at my **sole** risk. I personally select every bird that is sent away. I have over 4,000 (four thousand) birds in my rooms at the present time to select from, and I guarantee to give absolute satisfaction to every customer or return cash in full. Terms: Cash or deposit with Editor.

Send for 1917 Price List.

JOE THOMAS,

Breeder, Exhibitor & Exporter, AMBLER THORN, HALIFAX, YORKS

Established over 35 years at same address.

Members' Shows.

NOTE.--Secretaries will greatly facilitate the work of ourselves and our printers if they will kindly endeavour to send their reports as nearly as possible as they see these accounts printed, and if they will also write the names of exhibitors as distinctly as possible.

PLUMSTEAD & WOOLWICH C.B.S

Pair show, March 13, Trinity Schools, Beresford Street, Woolwich; 27 pairs were entered. As usual, the novices turned up strong, and some good Norwich were seen. Mr. Thorne won diploma for best pair. Mr. Taylor judged and gave satisfaction.—Geo. H. Macmillan, Hon. Sec.

VALE OF LEVEN C.B.C.

Mulo and Hybrid pairs show, Village School, Alexandria, March 17. 22 pairs staged. Mr. R. Heggie (Glasgow) judged, and his awards were well received. Goldf. and Canary: 1, spl, McIntyre; 2, Trotter; 3, Davidson; 4, Begg; 5, McNiven. Linnet and Canary: 1, spl, McIntyre; 2, Gilles. Siskin, etc.: 1, spl, Trotter; 2, McKirdy. Greenf. and Can.: 1, Trotter; 2, McKirdy. A.V. Var., W.B.F. Hyb.: 1, 2, 3, spl, Trotter; 4, McKirdy. Bullf. Hen for Hyb.: 1, McNeill; 2, Trotter; 3, McIntyre; 4, 5, 6, McKirdy.—George M'Coll, Sec.

SPRINGBURN, POSSILPARK.

Meeting and show of British, Reid Hall, March 14, Mr. J. Swan presiding over a good turnout. Judges were elected for annual show. Mr. M. Craig judged British and also gave a lecture on the same, which was much appreciated. Prize winners:—Linnet: 1, Lamond; 2, Robertson; 3, Brooks; 4, Swan; 5, Crawford; 6, Hamilton. Mealy Redpoll or Twite: 1, Crawford. Lesser Redpoll: 1, 2, 3, Crawford; 4, Swan; 5, Hamilton. Bullf. Hen: 1, Swan; 2, 5, Lamond; 3, Hughes; 4, 6, Hamilton. A.O.V. Hen: 1, Hamilton; 2, Swan. A hearty vote of thanks was accorded Mr. Craig for judging and for his excellent lecture, and a vote of thanks to the Chairman brought the meeting to a close.—A. Hamilton, Sec.

HUDDERSFIELD O.S

Monthly table show, Headquarters, March 12; 41 birds were staged; Mr. H. Mallinson judged.

Cl. Yell. Yorks. (6): 1, Holmes and Schofield; 2, Wood; 3, Morris; vhc, Gledhill; hc, Beaumont; c, Buttle. Buff (4): 1, Smithies; 2, Holmes and Schofield; 3, Sykes; vhc, Beaumont. Tkd. or Varieg. Yell. (3): 1, 2, 3, Bray. Buff (4): 1, Sykes; 2, Beaumont; 3, Holmes and Schofield; vhc, Bray. Unflig. Yell. (11): 1, vhc, Sykes; 2, c, Bray; 3, Smithies; hc, Holmes and Schofield. Buff (7): 1, 2, Bray; 3, Buttle; vhc, Smithies; hc, Cheetham; c, Gledhill. Cinn. Marked (6): 1, Morris; 2, Wood; 3, vhc, Cox; hc, c, Buttle. Nor. (2): 1, Jackson; 2, Morris. Principle point winners: Messrs. C. Bray, 41; A. Morris and A. Smithies, 29; Holmes and Schofield, 28; G. Wood, 27; A. Radley, 26; W. Buttle, 25; J. H. Beaumont, 21; and F. Sykes, 20.—A. Lawford, Sec.

LEEDS C.B.S.

Meeting and pair show, March 3, Griffin Hotel: Mr. J. Chambers, chair. Messrs. A. Wheatley, Major Scott, H. Barraclough, T. A. Alexander, A. Sam, L. Kitson, G. W. Kirk, and H. V. Taylor, were elected members. Dr. Cummings kindly promised a valuable cup for competition and Mr. R. Haigh a special value 21/- for amateurs in British section, and other good specials were given for Yorks. and Norwich sections, in addition to the society's section specials, which are 5/- respectively. Yearly syllabus will be ready for distribution at next meeting, April 1. The pair show brought only a moderate entry. Special kindly given by Mr. R. Haigh for most points was won by Messrs. G. W. Sanderson and W. A. Wilson, who tied with 18 points each. Mr. T. Baldwinson judged and gave entire satisfaction. Yorks. Open (8): 1, 3, 4, Sanderson; 2, vhc, hc, c, Reed and Son. Nor. (7): 1, vhc, c, Livingstone; 2, 3, 4, Wilson; hc, Sanderson. Mule or Hybrid (5): 1, 2, 4, vhc, Colborn; 3, Wilson.—W. A. Wilson, Hon. Sec.

EASTLEIGH C.B.S.

Members' table show, March 14, Council Chambers, Leigh Road; 60 entries were staged, including some very fine pairs. The awards were for honours only, and it was pleasing to find that there are still a few good sports left that do not always crave for money prizes. A very nice team reached us from Mr. Potter, of Lingfield. Special prizes were won by Messrs. Chandler, Sanger, Vale, Potter, Alderslade, and Clark. Mr. W. G. Fellows judged and gave every satisfaction. He also spent the evening with us, and was ever ready to answer questions to the novice as well as the champion.

Nor. Pair (5): 1, 2, Chandler; 3, Vale; vhc, Alderslade; hc, Sanger. Yorks (5): 1, Sanger; 2, 3, hc, Clark; vhc, Thornback. Bord. (2): 1, 2, Legg. A.O.V. (2): 1, Alderslade; 2, Clark. Hybrid (2): 1, Clark; 2, Alderslade. Single Nor. (8): 1, Chandler; 2, Sanger; 3, vhc, Thornback; h, Vale; c, Alderslade. Yorks (2): 1, 2, Thornback. Bord. (2): 1, 2, Legg. A.O.V. (1): 1, Vale. Goldf. (3): 1, Clark; 2, Vale; 3 Alderslade. Bullf. (10): 1, Potter; 2, hc, Vale; 3, Alderslade; vhc, Sanger; c, Compton. Linnet (2): 1, Vale; 2, Potter. Redpoll, Etc. (3): 1, 3, Potter; 2, Alderslade. Greenf. or Chaff. (4): 1, Vale; 2, Alderslade; 3, Clark; vhc Sanger. A.O.V. (2): 1, Clark; 2, Alderslade. Softbill (3): 1, Sanger; 2, 3, Turner. For. (1): 1, Thornback. Sol. (2): 1, 2, Clark; Mule (1): 1, Alderslade.—J. Alderslade, Sec.

"Food."

THE GREAT NEW NATIONAL WEEKLY.

A practical journal which shows how to grow our own food.

The profitable rearing of Poultry and animals which help to fill our food hill is dealt with each week, and invaluable advice is given to those who have started to produce home-grown fruit and vegetables.

No one with a garden, large or small, should be without this wonderful penny-worth, and the small holder will find in it a veritable treasury of practical knowledge.

Every Thursday 1d.

Advertisement forms and specimen copy sent post free on application to "Food" Offices.

154, Fleet St., London, E.C., 4.

Singing Contests.

Announcements of forthcoming contests in the nature of advertisements must be paid for at advertisement rates, two words a penny.

CASTLEFORD.

Linnet singing contest, March 18, Grey Horse Inn, Whitwood, near Castleford: 1, Williams; 2, Wainright; 3, Nelson. General meeting, George and Dragon Hotel, March 25, at 7. Business important.—W. Nelson.

BARNSLEY.

Dove Inn Linnet Club, Doncaster Road, March 18; 19 birds entered for 4min. time sing; nine birds did over 8min., and a novice came to the front with a bang, doing 3.44: 1, France and Dickinson, tie, 3min. 41sec. each; 2, Norburn, 3.42; 3, Grist, 3.35; 4, Wright and Wadsworth, 3.32 each. Shepherd, timer; Bamforth, cbalker.—J. Harman, Sec.

SHEFFIELD.

Linnet contest, Sportsman Hotel, Paternoster Row, March 18. 18 birds sang: 1, 2, Parlett; 3, Jess.—E. Phillipson, Sec.

We have received from Mr. R. D. Parlett, Sheffield, £5, being the money deposited with him in respect of the challenge of Mr. Driver to match his bird against any Linnet, Sheffield time singing, 1½min. face, 1½min. bluff.—Editor CAGE BIRDS.

LEEDS.

Linnet contest for quality, Clarence Hotel, Skinner Lane, March 18; 29 birds sang for four prizes. 1, Binns; 2, Ward; 3, Plows; 4, Bamfield. Judges: T. C. Summers, C. Ward. Timekeeper, W. Lipman.—T. C. Summers, Hon. Sec.

Open contest, the Glassmakers' Arms, Greyhound Place, York Road; 34 birds: 1, Richardson; 2, Marshall; 3, Buckley and Watson. Night singing; 18 birds: 1, Stockill; 2, Robinson; 3, Marshall. Judges: Dearlove, Bliss, Bomfield.—G. Marshall, Hon. Sec.

Grand contest for Linnets, Albion Hotel, Saville Green, Leeds; 24 birds sang for four good prizes: 1, Ward; 2, Stead; 3, Chippendale; 4, Hollingsworth. Judges, Hardcastle, Grant, Hayes. Contest for Linnets, same evening; 14 birds sang for three prizes: 1, Hollingsworth; 2, Jarrow; 3, Crane. Judges, Hardcastle, Grant.—T. Crane, Sec.

West Leeds Linnet and Canary F.A.—Linnet contest, Viaduct Hotel, Mar. 18; 24 birds contested. One of the pleasing features was to see some old fanciers from York Road way. There was keen disappointment felt when the visitors found out they were unable to sing their birds, owing to the contest being for club members only. The committee, however, decided to make next week's contest an open one, to give visitors a chance. The awards were: 1, Baldwin; 2, Long; 3, McNichols; 4, Chadwick. Judges: G. Batcholer, T. Kippling. Timekeeper, T. Cawood.—T. Cawood, Sec.

CLUB AND SOCIETY NOTICES.

ONE NOTICE of any forthcoming Society meeting inserted free. It must reach us not later than Tuesday morning's post. Specially printed Club Notice Postcards may be had free on application to our Manager. Secretaries should always use them.

NOTE.—Only the details asked for on our cards can be published. Such phrases as "a large attendance desired," etc., must not be included. Classification for forthcoming shows, appeals for new members, and any other matter in the nature of an advertisement will only be inserted if paid for at advertisement rates.

Bradford West C.B.A.—Mar. 24, Girlington Hotel, 7. Social and prize distribution.—F. P. Terry.

Burnley C.B.S.—March 26, 75, Lindsay St., 7.30. General business.—W. Broxup.

City and Suburban A.C.B.—March 26, Church Institute, Paddington Street, Baker Street, W. 8. Preparing for breeding.—F. J. Martin.

Durham City C.B.S.—March 24, Grapes Inn, 6.30. Election of officers, N.F. and annual show dates; social evening.—H. Briggs.

Dubmire Workmen's Club C.B.S.—March 24, Dubmire Workmen's Club, 6. Important business.—G. T. Lynn.

East Stanley F.F. C.B.S.—March 25, Club Room, 7. Balance sheet; election of officers.—J. Armitage.

Guisboro' "Priory" C.B.S. — March 31, Wear's Rooms, 7. Question night.—J. S. Campbell.

Gourock C.B.A.—March 31, Gamble Institute, 7.30. General business and question night.—D. Rollo.

Huddersfield O.S.—March 26, White Hart Hotel, 7.30. Special meeting of importance to receive the Yorkshire Union deputation.—A. Lawford.

Leigh C.B.S.—March 28, Railway Hotel, 7.45. Paper discussion.—R. Charleson.

Landord, Plasmarl and Dis. C.B.S. — March 24, George and Dragon, 6.30.—Hy. Fry.

Larkhall C.B.A.—March 31, Y.M.C.A. Halls, 7. Hat night.—A. Thomson.

Lanchester F.F. and C.B.S.—March 24, Queen's Head Hotel, 6.30. To arrange division of balance of last show.—J. Robson.

Midland Roller C.C.—March 26, Seven Stars, St. John St., Wolverhampton, 7.30. Novice cup and rules. Glucke tours explained by Mr. A. Harper; birds present; and other important business.—J. W. Thomson.

Manchester and N. Counties C.S.—March 26, Deansgate Hotel, 8. Table show of British; judge, Mr. Brnee; and general business.—F. Wilkinson.

Nantymoel, Ogmore Vale C.B.S.—March 28, Lesser Hall, Nantymoel 6. Paper by the chairman, Mr. A. W. Whitford. Visitors invited.—T. Davies.

Newcastle E. End C.B.S.—March 28, Blue Bell Inn, Shields Road, 7.30. Usual business and show date.—Ed. Cotman.

Penygraig C.B.S.—March 27, Butchers' Arms, 6.30. Special meeting.—W. H. Hollinshead.

Queen's Park (Glasgow) C.B.S.—March 28, Y.M.C.A. Rooms, 8. Judges for annual show and lecture by Mr. Davidson, Mossend.—A. Foreman.

Richmond (Surrey) C.B.S.—March 26, St. John's Hall, 8.—C. Parmiter.

Sheffield C.B.S.—April 3, Wentworth Cafe, 8. Questions and answers on birdy matters; election of judges for N.F. show.—A. Hobson.

South Moor Social Club.—March 25, Club Room, 6.30. Election of judges, etc.—G. Lane.

Swinton and Pendlebury Roller C.C.—March 28, Bridgewater Arms, Pendlebury, 7.30. Club business.—E. Hibbert.

Southern Border Fancy Club.—March 26, Guildhall, Wandsworth Road, S.W. 8. Decide business for year, patronage, etc.—Geo. Burton.

West Bromwich and Handsworth.—March 24, Ivy House, Handsworth, 7.30. Lecture by Mr. Jeffries.—F. T. Cowley.

Warrington C.B.S.—March 29, Blue Bell Sale Rooms, 8. Lecture by Mr. W. R. Knowles, "Rearing of Young Canaries."—H. Warburton.

Club Reports.

HULL ROLLER C.C.

Meeting, headquarters, Argyle House, Anlaby Rd., Hull, Mr. Seaman chair. Items of interest were discussed. Decided to uphold the Federation rules, every member voting for Rule 6, the so-called disaster rule.—A. Baggaley, Sec.

DONCASTER C.B.S.

Meeting, March 10, Black Bull. Presentation of cups took place before a poor attendance. Decided to have a seed show at next meeting, April 14. Classification: Canary, rape, teazle, hemp, niger, maw, and mixed seed for British. Entry fee 3d.—H. Lumby, Sec.

LARKHALL C.B.A.

A very interesting evening was spent, March 17, in Y.M.C.A. Halls, when Messrs. Kundell and Kennedy gave a demonstration in hand-washing Canaries. There was a splendid turn-out and old hands, as well as novices, benefited by the exhibition. Other members, on being asked, also tried their hand. Arrangements were also made for a Hat night on March 31, at 7 p.m.—A. Thomson, Sec.

LOANHEAD C.B.S

Meeting, Mar. 10, Mr. W. H. Nelson presided over a good attendance. Members elected: Messrs. Alexander, Cox, Gray, and Smith. Agreed that it be left open to end of April for new members. Members then booked their hens, after which nomination of judges took place, and the sec. was given a list of prominent fanciers to be written as voted; classification was considered, and it was agreed to do away with Softbill class and add a class for hen British. A vote of thanks to chair brought the meeting to a close.—W. B. Smart.

SHEFFIELD C.B.S.

Meeting, March 1, Mr. Hemming presiding. Point sp. winners for last members' show, Messrs. Hinchliffe, Waters, Walsh and Evans. By an error, Mr. Gregory was credited with winning the Yorks Cup; this should have been Messrs. Bingham and Furness. Unfortunately only two papers were written on an ideal bird-room, but several members expressed their views. Messrs. Lister and Gee were elected members. The balance sheet could not be presented owing to the illness of the Secretary, and we hope he will soon be enjoying good health. Next meeting, questions and answers on birdy matters.—E. Sisson, Assist. Sec.

NANTYMOEL, OGMORE VALE.

The above new society held its first meeting, March 14, at the Workman's Hall, which was well attended by a large and enthusiastic body of fanciers, 40 members joining and paying entrance fee; subscriptions also coming in fairly well. Six members joined in the junior section. The object of the society is to foster the breeding and exhibiting of cage birds. The society is open to a 12-mile radius. Fanciers are heartily invited to communicate with the Sec. Officers elected: Pres., Dr. Thomas; J.P.; Vice, Messrs. T. Job, D. Hughes, J. Phillips, W. Davies; Chairman, A. W. Whitford; Vice, W. M. Davies; Treas., J. Esmond; Sec., T. Davies; Assist., E. Meek; Committee, R. Garnett, H. Jones, E. Barnes, W. Ashley, H. Tucker, F. Clemmet, B. A. Harrison.—T. Davies, Sec., 29, Oakfield Terrace, Nantymoel, Glam.

MIDDLESBRO & TEES-SIDE C.B.S

Meeting, Crown Hotel, March 3, with a good attendance, and new members again were numerous, including Mr. G. R. Gordon, F. Watts, Mr. Horton, and W. Watson. Mr. J. Carr gave a very interesting account of breeding operations, and the care of young, which was of great interest to the novice members in particular, as well as helpful to the older fancier. Questions were invited and were soon forthcoming; these were very ably answered. We very much regretted the loss of an old and esteemed fancier in Mr. A. Wake; owing to his extreme pressure of business he has been reluctantly compelled to resign, and we all hope he will soon see his way clear to resume his past generous support. We should be glad to hear from any fancier desirous of joining us, and we can assure plenty of competition, and valuable information. Meetings are held at Crown Hotel first Saturday in each month, at 7.30.—F. Stothard.

NEWCASTLE-ON-TYNE C.B.S.

Meeting, Co-operative Library, Mar. 3, Mr. George Dobson presiding over one of the largest attendances for a long time. The chief item on the agenda was the balance sheet, which did not prove satisfactory to some of the members, and caused a long discussion. There is a balance in hand of £9 18s. 2d. on the year's working, the 1916 show bringing us in a balance of £7 4s., and the secretary was granted £2 for his work. The secretary handed in his resignation, which was accepted; also the chairman resigned. Mr. Peter Lynn was elected chairman for 1917, and Mr. J. J. Walker Sec. We made four new members, and hope to make more, as we intend to be a go-ahead society in the future. We have reduced our subscriptions to keep on a level with other societies, and subs. are now 2s. 6d., with 1s. entrance. Those wishing to join will be received with pleasure if they send their names on to the secretary for the next meeting, April 7, when the chief item will be the revision of the rules. We hope to see as many members present as possible. Note change of meeting room to the Wesleyan Chapel Smoke Room, April 7, at 7.30. Secretary's address is: J. J. Walker, 7, Middle Court, Blaydon-on-Tyne.

NORTH-WEST GLASGOW C.B.C.

Meeting, March 13, Unionist Rooms, 398, New City Road, Mr. P. Thom presiding over a splendid turnout. The principal business was a show of British birds and a lecture on British birds. The show was one of the best the club has had, as quantity combined with quality, and must have given Mr. W. Watson, the judge, some trouble. His awards were very well received, and he was accorded a hearty vote of thanks. Goldf., H.-M.: 1, Brown. F.-M.: 1, Swan. Bullf., H.-M.: 1, Lloyd. F.-M.: 1, Davidson. Greenf., H.-M.: 1, Manson; 2, Beullet; 3, Brown. F.-M.: 1, 3, 5, Crawford; 2, spl, Davidson; 4, Brown. Linnet, H.-M.: 1, McGregor. F.-M.: 1, spl, McGregor; 2, Booth; 3, spl, Davidson; 4, spl, Manson; 5, Swan; 6, Lloyd; 7, Lindsay. Siskin, etc., H.-M.: 1, Crawford. F.M.: 1, 2, 5, Crawford; 3, 7, Lindsay; 4, Davidson; 6, Lloyd. Seed-eating Hen, H.-M.: 1, Swan; 2, spl, Manson; 3, spl, Boullet. Chaffinch, F.-M.: 1, spl, Lindsay. Bramble, H.-M.: 1, Swan; 2, Manson. Buntin(H.-M.: 1, Booth; 2, Swan; 3, Brown. Large Brit. 1, spl, spl. for best in hall, Crawford; 2, 3, Brown. For. Goldf or Bullf.: 1, Fyfe. During judging Mr. M. Craig treated the members to a very interesting and instructive lecture on British birds, and at the close had quite a host of questions asked, which he in every case suitably replied to and was also accorded a hearty vote of thanks.—P. Houston, Sec.

GOUROCK C.B.A.

Meeting, March 10, Gamble Institute, Mr. John Allison presiding. After the general business a lecture was given by Sergt.-Major Hunt on the pairing and management of the Yorkshire Canary for breeding, which was very interesting and enjoyed by all present. At the conclusion questions were asked, and some of them were very interesting for the younger members. Sergt.-Major Hunt had four birds on the table while he was lecturing and answering the questions put to him. A hearty vote of thanks to him brought this first lecture of the new club to a close.—D. Rollo, Sec.

LOCHGELLY C.B.S.

Meeting, March 17; Mr. Smith, president, in the chair. Decided to hold our annual ramble on June 4, and if it can be arranged, same will be held on one of the Falkland estates. Also decided to have a table show of British birds, Mules and Hybrids, March 31, in the Ante-room, Drill Hall. [illegible] Goldf., Bullf., Linnet, Greenf., Siskin, Twite, and Redpoll, A.V. smaller than Corn Bunting, A.O.V., A.V. British hen, Dark Mule, Light Mule or Hybrid. A well-known Fife fancier is to be asked to judge; the starting time will not be later than 5 o'clock, but members are asked to turn up as early after four as possible. A meeting will be held immediately after. Entry fee 6d. per bird; prize-money on sliding scale.—W. Grewar, Sec.

NELSON ROLLER C.C.

At the meeting of the Nelson and District Roller Club, March 6, it was decided to change the meeting night to Thursday, and future meetings will be held on the first Thursday in each month. The membership is increasing rapidly, and has more than doubled since January. The following new members have been elected: J. Mortimer, W. Pimm, H. Gates, J. Driver, R. Berrey, J. Davidson, E. Sexton, H. Sagar, Mrs. E. Harrison, Mrs. L. Harper, and the club is going strong. At the close of ordinary business a lecture was given by the secretary on the breeding and management of the Roller. Discussion followed, and a very profitable evening was spent. Mr. Mawhood ably fulfilled the duties of chairman, and a hearty vote of thanks was given to the speaker.—J. Earnshaw, Sec.

The M.S. of the lecture referred to was kindly forwarded to us by Mr. Earnshaw, and has been published.—Editor, CAGE BIRDS.

The Redpoll.

Its Caging, Feeding and Exhibiting.

By Private E MITCHELL, Edinburgh War Hospital.

I AM writing this short article, hoping that it will be of use to the novice, if of no use to the "pro."

The best time to purchase the Redpoll is during October and November. Send to a bird catcher for a dozen or two Redpolls, and in all probability you will get a decent exhibition bird.

Say you have ordered a dozen birds; have a dozen cages ready for them. These cages I call receiving cages. A receiving cage is 9 inches long, 6 wide, and 7 high, and the top is of cloth instead of wood. In the seed drawer have an equal mixture of soaked canary and summer rape, with a sprinkling of maw and dandelion on the surface, also see that the drinker is full of boiled water.

If the birds are in good condition when you receive them, they readily partake of this seed mixture, and in all probability be on their ordinary diet the following day. The ordinary diet will consist of plain canary, with a sprinkling of summer rape on alternate days, and on the intermediate days a sprinkling of dandelion, maw, teazel, linseed, or any wild seed, but never two of these seeds together, or the birds will get too stout for exhibiting.

Having now had the birds a week, get them fairly steady, and on ordinary diet, transfer them to their stock cages, 14 inches by 9, and 12 inches high, the interior painted holly green, also the wires, and the outside black enamel.

Having kept the birds in good condition all the summer months, you will find them sickening for the moult at about the end of July or the beginning of August. Now is the time you will prove if you can bring the birds through the moult with success. To bring the birds through the moult successfully I have found the following treatment most satisfactory.

First of all protect the birds from the sun by nailing a piece of calico over the bird-room window. Give them a bath or a spraying daily, always before noon. Keep them as quiet as possible, allowing no visitors in the bird room during the moulting season. Give the birds as much natural food as possible, such as dandelion, thistle, teazel, etc. Providing you treat the birds as above you will get them through the moult in excellent condition, and ready for the early shows.

You will be surprised at the amount of sheen on your birds after the moult, and by keeping your cages covered you will be able to show the birds at the early shows without having to hand-wash them, but by all means send them to the show in a first-class condition. A suitable exhibition cage can be had from any dealer for two or three shillings, and a real typical 'Poll, shown in a good condition, generally makes a good fight for the "red ticket."

SHOW DATES FIXED.

To secure insertion in this column, a guarantee that the show will be advertised in "C.B." to the extent of at least 25/- must be sent to our manager.

England.

Nov. 1.—Blaenavon C.B.S.—(Geo. Broome, 82, King St.)

Nov. 3-5.—Leicester Hand-in-Hand C.B.S.—(Day and Roberts, 28, Francis St.)

Nov. 14.—Coventry O.S.—(J. Kent. 91, Villiers St., Stoke, Coventry.)

Wales.

Nov. 15.—Swansea C.B.A.—(J. H. Ford, 83, Norfolk St.) D.J., S.J.N.

Twitterings.

Mr. Bert Lewis writes that he has removed from Morley Street, Kettering to Brayton House, Stamford Road, Geddington, nr. Kettering.

British bird fanciers will be pleased to know that J. Nicholson, of Northallerton, has again taken up the fancy, and hopes to meet fellow fanciers during the next show season.

Abertillery C.B.S. has fixed Wednesday, Oct. 24, for the date of its next open show, writes Mr. J. Webber, hon. sec. Will other societies please note to save clashing.

Mr. R. Jeffrey, Glasgow, won the Scottish Plainhead medal for best hen at the City of Glasgow Show, writes Mr. E. Barron, sec. Scottish Plainhead Club, not Mr. P. Houston, as stated in report of Scottish Plainhead annual meeting.

We have fixed our nest feather show for July 14 and annual show Nov. 3, writes Mr. J. Stanger, sec. Pelton Fell C.B.S. We would like a few more members, any radius. We have about 30 members, and last year we paid 9s. 6d. a class on a 6d. entry; we had 333 entries in 59 classes.

Private Arthur Downs, who is about to be discharged from the Army as unfit for further service, and who has been six months under hospital treatment for shell-shock and wounds, wishes us to thank enquiring friends, and to say that, although his bird-room and cages have been kept intact, he will have to begin again with fresh stock, and cannot for the present reply to enquiries for birds.

The Aberdare C.B.S., writes Mr. T. Davies, is still afloat, and headquarters is changed to the Prince of Wales' Hotel, Aberdare, and owing to our late sec., Mr. Shelby James, being called up, we have elected new officers, and the Society is likely to go on well. Fanciers desirous of becoming members can do so by applying to the sec., Mr. A. J. Evans, No. 24, Davis Street, Aberaman, Aberdare.

A Roller Singing Evening at Haslingd·n.

A special meeting of the Haslingden Roller C.C. will be held at Victoria Hotel, Haslingden, on Saturday, Mar. 24, commencing at 2.30, when Mr. Kilshaw, Bolton, will explain the Roller song, writes Mr. H. Nuttall, sec. Birds will be present. Friends are heartily invited.

An Apology.

I am sorry, writes Mr W. Mundell, that in an unthinking moment I foolishly repeated to some of my friends certain remarks I had heard respecting the judging of Mr Chittenden at Bradford East Show. I find the statements to be entirely without foundation, and I offer a frank apology to Mr. Chittenden for having repeated them.

On March 29, at the Butchers' Arms Hotel, at 6.30, writes Mr. Wm. H. Hollinshead, hon. sec. Penygraig C.B.S., our esteemed friend the Rev. C. B. Jolliffe is coming to give us a lecture on the Ideals of a Cage Bird Society, etc. Fanciers around the district are given a hearty invitation to hear what Mr. Jolliffe and other gentlemen have to say.

OBITUARY.

MR. ROBT. MOORE (Coxhoe).

I deeply regret, writes Mr. A. E. Priest, sec. Bowburn C.B.S., to announce the death after a long and painful illness of Mr. Robert Moore, of Bell's Houses, Coxhoe, at the age of 66 years.

He was a good fancier, and a man of great experience, both in breeding and cage making. He was ever ready to give advice and help in the fancy, and will be missed by a great many fanciers in Durham County. I am sure all who knew Robert will join me in offering our deep sympathy to his family in their sad bereavement.

It is with great regret that we hear, just as we are going to press, of the sad bereavement which has befallen Mr. R. J. Watts, of Huntingdon, and late of Watford, in the loss of his young wife after only three years of happy married life.

Mrs. Watts was taken ill about March 10, and an operation was performed Friday, Mar. 16. She died on Saturday last, March 17, and was buried at Watford on Wednesday, Mar. 21st.

She was a daughter of a well-known inhabitant of Watford, Mr. F. Sargeant, an important official of the London and North-Western Railway. It it a sad and sudden blow to our respected friend, and all who know Mr. Watts will join us in heartfeld sympathy with him in his great trouble.

An Evening for Warrington Fanciers

At the meeting of the Warrington C.B.S., in the Blue Bell Sale Rooms, on Thursday, March 29, writes Mr. H. Warburton, hon. sec., Mr. W. R. Knowles will give a lecture on the "Rearing of Young Canaries." The Committee extend a cordial invitation to anyone interested in the subject.

New Roller Canary Club for London

Further to the announcement you were good enough to make last week, writes Mr. J. Aspinall, a meeting has been arranged for March 27, at 7.30, at the Bazaar Tavern, 10, King Street, Baker Street, W. Roller fanciers in and around London are heartily invited.

New Society for Portsmouth.

I shall be much indebted, writes Mr. W. Stapley, 13, Nutfield Terrace, Clarendon Street, Portsmouth, if you will kindly state that I and several brother fanciers are forming a new Fanciers' Association in Portsmouth. All particulars will be gladly furnished to any interested fanciers on application.

Still They Come.

It is proposed to form a Roller Club for Smethwick and District, affiliated to the B.R.C.C. Mr. W. Heeley, 20, Edith Road, Cape Hill, Smethwick, will send particulars on application.

A Business Closed Down.

Being of military age, and having been refused further exemption, writes Mr. J. Martin, cage maker, Castle Douglas, I have to join the Army on Mar. 20. I much regret having to close down, as trade was never better with me than at present. However, under the circumstances it cannot be avoided, and I trust it may not be for long. I hope CAGE BIRDS will continue to flourish, and that there will be happier times in store for all its readers.

"Our Canaries."

The demand for OUR CANARIES has been of such a nature that our supply for the moment is completely exhausted. Owing to the shortness of labour, we have been unable to get the volumes ready to fill the very large number of orders received from day to day, but we are doing our very best to meet the demand. All orders in hand will be executed in strict rotation, and as soon as we are in a position to cope with fresh orders we shall announce the fact in these columns. In the meantime we ask the indulgence of those who are waiting for their copies to be sent to them.

Seasonable Hints on Useful Weeds.

By RICHARD MORSE, F.R.H.S.

A new weekly feature which will be found of the highest value to all who keep seed-eating birds, and of interest also to all who appreciate the beauty and usefulness of the flowers of our waysides and meadows.

About Ivy Berries.

THE winter season now drawing rapidly to a close has been a most trying one for the birds. The severe and prolonged spell of hard frost in the early part of last month rendered the question of food supply a very serious matter, and scores of birds must have perished from sheer cold and want in all our rural districts.

It has always been a matter for much surprise to me that even after severe spells of bad weather such as this winter has brought us one can always find quantities of food materials in odd corners, and even sometimes in quite exposed places, apparently untouched by the birds. Why these supplies are never found and utilised in times of pressing need is a little rural mystery we may never be able to clear up.

I have passed at very frequent intervals during the winter under a dense mass of the common ivy (Hedera helix L.), and though it has been laden with berries for the whole of the time; these still remain intact in their familiar clusters, in spite of the fact that birds abound in the immediate vicinity. In other cases, every available berry has been greedily devoured by the Blackbirds, Missel Thrushes, Wood Pigeons, and other species which favour the ivy's attractive repast.

We so naturally associate the production of fruits and berries with the autumn season that to the uninitiated it comes as a surprise to find the common ivy departing widely from the usually accepted order of things, and not even expanding its flowers until the bleak days of October and November are with us. Ivy blossoms, though, are very often entirely overlooked, for besides coming at an usually uncongenial time of the year, they are of an inconspicuous greenish-yellow colour, and almost invariably occur only in places well out of ordinary reach.

The berries of the ivy grow in stalked clusters, as shown in the accompanying illustration. They are somewhat globular in shape, and about one third of an inch in diameter, and though at first of an inconspicuous green, they ultimately become a deep puplish black. It is at this stage that one may still find them in all rural districts where the depredations of our native songsters have not yet told their tale.

IVY IN FRUIT,
and various forms of Ivy Leaves.

Ivy leaves vary in shape to a remarkable degree, from the simplest oval through all gradations up to very deeply cut forms, a few of the more characteristic of which are shown in the sketch.

Although ivy appears to thrive on banks, and as an undergrowth in woods and copses, I have never yet found it to flower in such situations, in spite of its having been thoroughly established there for generations. It would seem that the plant needs the stimulus of abundant air and sunlight before it can develop a single truss of blossoms, and it is therefore useless for berry-gatherers to search for this food in any but exposed and elevated situations.

Readers are invited to send any botanical specimens which they have difficulty in identifying. The whole plant, including fruits, should be sent whenever possible. Packages should be addressed "The Editor, CAGE BIRDS, 154, Fleet Street, London, E.C. 4, and must be accompanied by a P.O. for sixpence. Answers will appear in this column.

A Great Pennyworth.

IN CAGE BIRDS of January 20th, I wrote an open letter to our readers telling them of the coming of the new paper, "FOOD," and outlining some of the good things which were to appear in it.

Ten numbers of that paper have now been published, and I am wondering whether there are any readers of CAGE BIRDS who have not yet seen a copy. If there be such, their first task should be to get this week's issue from their local newsagent or bookstall. In the present shortage of paper it may not be possible to get a copy unless it has been previously ordered, but a postcard to the publisher, "FOOD" Offices, 154, Fleet Street, London, E.C. 4, will ensure a specimen copy post free.

It is not too much to say that there is something for everybody in every issue in the paper. Some of the good things in the present week's issue, for instance, may be mentioned. The front page tells in picture form how to sow the seeds of the ten most useful vegetables. There are articles on the keeping of various domestic animals. It tells what vegetables may be grown in any back garden, and how to grow them, how to grow 14 lb. of currants on a single bush, the kinds of vegetable seeds to sow, and many other things connected with the production of food from the earth. There are points about chicken rearing, recipes for the wife, with all kinds of hints about cooking, and so many other good things that if the price of the paper were sixpence instead of a penny it would be money well spent to get a copy weekly.

Beg, borrow, or buy a copy to-day, or send for a sample copy, post free, and you will never again be without your weekly "FOOD."

THE EDITOR.

Queensland Grows Canary Seed.

Experimental sowings of canary seed are being made in many parts of Queensland, as the war has brought about a prospect of high prices for some years after peace is declared. No Turkish canary seed is to hand in Australia nowadays. The Australian market is supplied by Morocco and the Argentine, and the landing cost is £27 to £28 a ton. Added to this are the duty and other expenses, totalling £3 a ton. There is also the cost of cleaning and of putting in smaller packages. Hence the Queensland price for this article is 34s. to 36s. per cwt., or nearly double the normal value that was current here before the war. (Kindly sent by the London correspondent of the North Queensland Register.")

The Prepayment of Carriage on Parcels.

Enquiries are coming in as to how the new regulation of the railway companies that on and after April 2 all railway charges on parcels must be prepaid will affect advertisers. The matter is not quite easy to decide offhand, for it is obvious that an answer to an advertisement may come from a few miles away or a long distance, and the carriage would vary accordingly. It seems that an option is open to the advertiser to state that carriage must be added to the advertised price and paid beforehand by the purchaser. In the absence of this statement it would, of course, be understood that prices quoted included carriage, and the seller must take his chance as to whether this be little or much. We shall be glad to publish workable suggestions if readers can see a better way out of the difficulty.

A Siskin as an Alarm Clock.

A reader kindly forwards us the following cutting from the Glasgow "Bulletin":—

"I have seen the statement more than once that no Scottish bird sings at night. The Sedge-Warbler may not be much of a warbler, but it certainly does sing between sunset and dawn to the best of its ability. A friend of mine, however, has discovered a real Scottish night-warbler. It is a Siskin which he keeps in a cage. Night after night it breaks forth in splendid song, not only in gaslight but also in darkness, after all the family are in bed and only a few dying embers lie in the grate.

"This Siskin is a sort of sentinel bird. If it hears footsteps on the street it warbles at once. It would, therefore, do for a burglar alarm. Being familiar with the habits of the household, it breaks forth in shrill carol before the alarm clock, of which it seems to be jealous, sounds its inevitable chime. On Sunday mornings it causes some irritation by "calling all hands," as if there were no day of rest. The cage door is left open at night, and the bird flutters through the house when it summons all to be up and doing."

FAVOURITE FOREIGN BIRDS.

By "TYRONE."

(Continued from page 154.)

Some practical hints upon the treatment of the more inexpensive of the many beautiful foreign birds which may be kept as pets.

THE Striated Finch is a native of India, and is soberly clad in shades of black, brown and white. It is not very common, and is not particularly interesting in the aviary, but can generally be trusted with other birds, and is fairly hardy. The cock and hen are alike. It is probably from the Striated Finch that Bengalese are descended, and the same food and treatment will suit both varieties.

The Bengalese.

(*Fringilla Bengalus.*)

The Bengalese is a delightful little bird, and will be equally at home in cage or aviary. It breeds very freely when once started, but, like most cage-bred birds, individuals vary greatly; and while some hens will settle down at once and rear nest after nest of young birds, others will only play at nesting, and the whole season will be wasted.

Where breeding is desired it is not advisable to have more than one pair of Bengalese in the aviary, for all the birds will crowd into the same nest at night, and the eggs will get broken or lost. Perhaps it is a better plan to leave the odd birds and young ones in the aviary, and to put the pairs separately into large cages, where they can nest undisturbed.

They should have two nest boxes, not less than three inches square, for while the hen is incubating the cock loves to sit beside her in the box, and he always sleeps there, too. When once fairly started they are most careful with eggs and young birds, and, if not disturbed, rarely allow a young bird to die. They lay from three to six small white eggs, and hatch them in about twelve days.

The young ones are fed on white and spray millet and Canary seed, and during the first week the old birds will give them egg-food; after this they hardly seem to touch it. They also need plenty of flowering grass and chickweed and fresh water. Cuttle-fish bone, mortar, and sea sand should also be supplied.

Bengalese are extremely fond of bathing, and seem to delight in emptying the water vessel as often as it is refilled. To prevent their cage being constantly wet and unwholesome it is a good plan to hang a small cage in front of the door, and to put all water supplies in this.

On no account should water glasses be hung outside the cage as they are placed for Canaries. The Bengalese could not reach them to drink, but some day one of them would squeeze through the opening and be drowned.

As soon as the young birds can crack seed for themselves they should be removed from the cage, or they will interfere with the next nest by all crowding into the box.

Bengalese are not hardy enough to winter out of doors in England, but require a little warmth during the cold, damp months. When they first arrive many of them cannot fly much, and being timid, gentle little things, they should be watched when first turned into the aviary. Cocks and hens are alike in plumage, but the cock sings a quaint little song, puffing out his feathers in a very comical manner.

The Zebra Finch.

(*Amadina castanotis.*)

The Zebra Finch has many qualities that make him a welcome addition to the aviary. He is prettily coloured, hardy and cheap, and breeds very freely if undisturbed. The cock is a pretty blue grey above and white below; he has a patch of chestnut colour on his cheeks, and on his sides a band of the same colour covered with white spots. His tail and throat are prettily barred with black and white. The hen is soft blue-grey all over with two black streaks on her face, like the marks of tears. Both birds have bright yellowish-red beaks.

Zebra Finches come from Australia, and usually arrive in very good condition, but it is a good plan to keep them caged without the opportunity of nesting until they have quite recovered from the effects of their voyage.

Imported birds often seem to rear larger broods than aviary-bred ones, which are in many cases rather small and weakly through inbreeding; but then the imported birds prefer to start nesting in the autumn, just as the bad weather begins.

When once the birds have made a start, they will, in a warm temperature, rear nest after nest nearly all the year round, only stopping during the moult; but this should not be allowed, and the birds should be separated during the winter and forced to rest if strong young ones are to be reared. But though most Zebra Finches are free breeders, some of them are very disappointing, and will only pretend to nest, and these frequently birds that seem to be particularly strong and healthy.

The Zebra Finch builds a domed nest in a bush if it can find one to its liking, or failing that, in a nest box or coconut husk. They lay from three to six small white eggs, and incubate about 11 or 12 days. With all foreign birds it is difficult to tell the exact time of incubation, for a very little interference will cause them to desert their nests, even after the young have hatched, and Zebra Finches especially dislike to be peeped at.

The cock Zebra seems to take a good share in incubating, and when off the nest he stays near and defends it with great spirit, driving away birds twice his size if they approach too near. In my aviary he is quite master of the Ribbon Finches, whom he specially dislikes to see near his nest, but he only attacks those birds who also build in boxes.

Young Zebra Finches resemble their mother at first, only they have black beaks instead of red ones. These change colour when they adopt the adult plumage at about six weeks old. The young birds have a curious way of asking for food when the old ones come near them; they throw themselves almost on their sides, and turn up their heads sideways with open beaks, clamouring loudly all the time.

For food Zebra Finches require millet and Canary, with chickweed and flowering grass. When the young are hatched egg food should also be given, with or without ants' eggs.

The Zebra Finch has a funny, rasping song, and a loud call note, which is frequently uttered, and sometimes becomes rather irritating.

Gouldian Finches.

Gouldian Finches are the most beautiful of all the small birds generally imported, but unfortunately they are decidedly delicate at first. There are two varieties, usually described as "red-headed" and "black-headed." The red-headed cock has a lovely crimson head and neck, green back and wings, and violet breast, changing to orange lower down. The colours of the blackheaded cock are the same except for the difference in the head. The hens are paler, and in them the orange and violet is changed to yellow and mauve.

Gouldian Finches come from the hotter parts of Australia, and until they are thoroughly acclimatised it is absolutely necessary that they should be kept in a warm temperature. For the first few weeks this should be quite 65 or 70 deg., but it can be lowered when the birds have quite recovered from the effects of the voyage.

When thoroughly acclimatised the temperature of a sitting room will be warm enough for them in winter, and in the summer they will be quite happy in the garden aviary, where they will probably nest.

When the Gouldians first arrive it is a good plan to put them in a large flight cage, where they get plenty of exercise, and yet have careful attention until they get quite strong. Their food is very simple, white and spray millet being the principal item, with a little Canary seed and Indian millet.

Spray millet should always be given, as some Gouldians prefer it to any other seed. It can be bought very cheaply in bundles of fifty sprays. Dandelion and grass seeds they will also enjoy, also chickweed, shepherd's purse, and flowering grass, provided they have not been frosted.

While they are in the high temperature their water for drinking and bathing should be slightly warmed to prevent the birds taking a chill. They enjoy their bath, and should be encouraged to take it two or three times a week; it will help to get their plumage into perfect order, and birds are never happy when their plumage is rough and ragged.

At first it is wiser not to give Gouldians too much grit. They have probably not been used to it during the voyage, and when again in the land of plenty are apt to eat too much. Just at first fine sand with cuttle bone will answer just as well, and later on grit can be given gradually, with a piece of rock salt and crushed egg-shells.

When Gouldians are thoroughly acclimatised it is quite time enough to encourage them to start nesting. They must not be allowed to do so in late autumn, which is the natural time for imported birds, but should be kept in cages or separated during the winter, and put into the garden aviary or large breeding cages about May, just before they moult, and about July, when the moult is over, they may be expected to begin to build.

Many Gouldians are desperate fighters while they are nesting, so a single pair is more likely to do well than several pairs kept together. They should be perfectly strong before they start nesting, as the hens have a very troublesome way of dying just when success seems to be in sight.

Gouldians seem to prefer a coconut hung high up in the aviary, but it should be well out of the reach of mice. Imported birds seem in many cases to rear their young ones on seeds alone, but aviary-bred young ones probably learn to eat egg-food before their own time for nesting arrived. Aviary-bred birds would also be likely to nest in spring instead of autumn.

The young birds generally assume the adult plumage at their first moult.

The Parson Finch

(*Poephila cincta.*)

Although the colouring of the Parson Finch is not brilliant, he is decidedly an attractive bird. He has a grey head, brown body, and black tail, with a white patch at the root of the tail, and a black patch on his throat.

The male and female are much alike, and it is difficult to distinguish between them, though her black patch is not quite as large as his. The cock has a splendid and decidedly musical song, so this is perhaps the safest test.

When thoroughly acclimatised the Parson Finch will live out of doors during the winter in a cosy aviary, but if kept indoors it should be in a fairly warm temperature. It almost always does best in a garden aviary during the summer months.

Parson Finches are not difficult to breed in the garden aviary, but when the nesting season approaches the cocks are often extremely quarrelsome and fight desperately. It is wiser, therefore, to have only one pair in the aviary.

Parson Finches generally build their nest of dried grass and hay, and line it with feathers. A Hartz Mountain cage or cigar nest box is generally chos[illegible] wild birds build a large covered nest in a bush. They usually lay four or five white eggs, and hatch them in about 13 days.

The young ones leave the nest when about three weeks old. They are sometimes reared on the millet and canary supplied to the old birds, with plenty of chickweed and flowering grass, but egg-food and ants' eggs may be added, and will probably be appreciated.

Egg-shell and cuttle-fish bone should always be within reach of the old birds.

THE ROLLER CANARY.

ITS BREEDING AND MANAGEMENT.

By J. EARNSHAW.

(Continued from page 153.)

The following interesting and instructive lecture was given before the members of the Nelson Roller Canary Club, by the Secretary, Mr. J. Earnshaw, and, upon our request, has kindly been forwarded to us by the lecturer for publication. The very sound advice given will be of value to breeders of Canaries other than the Roller, to which it was especially intended to apply.

FOR our new fanciers who are just on the point of trying their hand I recommend the small handbook, "Canary Breeding for Beginners," issued from CAGE BIRDS offices, and to old and young fanciers I recommend to support CAGE BIRDS in these trying times.

Have you ever considered what a blow it would be to the fancy generally if this (now the only paper of its kind) were to cease publication owing to the critical times which all work of its kind are up against? In our own interest we must help it to weather the storm. Without a paper of its kind we should be like a ship without a rudder. There would be no advertising medium for our birds or shows, seeds, appliances, etc., no exchange of views, and little knowledge of the doings of other societies. There is a fund of knowledge to be gained from its pages, and no fancier, either new or old, can afford to do without it, or he soon becomes out of date.

The Survival of the Fittest.

I hope you will excuse me if I seem to have wandered from my subject, but I believe it to be of such paramount importance that it is necessary to remind you, and also for you to remember that the only other paper of the kind was unable to see a way to continue soon after the outbreak of war.

To come back to our subject. The daily routine must be systematic and regular. Most of you are early risers, owing to the workshop and mill life which necessitates work from 6 a.m. to 5.30 p.m., with time off for breakfast and dinner. Those of you who live near to your work and can get home to meals are fortunately placed, and can keep a constant eye on the birds, and see that things go on well.

If the fancier be unable to get home to meals, then someone must give a hand in feeding and watching over his birds during the day. I rise early, and attend to their wants, going round with the egg food, and seeing that each cage is supplied according to its needs before proceeding to work. At breakfast time, 8 to 8.30, I manage to find a minute or two to spare to slip round with a little green food where required, glance through the cages to see that all is in order, and remove the eggs that are laid, making a chalk mark on the cages for my reference when I have a little more time. At noon I again fill up their egg pots, and give the required extras, such as cracked hemp, green food, or soaked rape, according to need.

In the early evening give them a last feed for the day, but no green food this time, as stale green food left in the cages becomes poisonous. Remove all stale food, and attend to all the little jobs that have accumulated during the day.

If any young happen to be found lying cold and stiff, don't give them up, but place them in the palm of the hand, and breathe gently on them, and in many cases they will begin to stretch and soon gape for food. Chew up a little yolk of egg, and give the youngsters a cropful off the end of a quill, and restore them to the nest, when the hen will settle down to the chicks for the night, and the youngsters will be quite all right next morning.

At evening is the time to ring your young birds, set your hens, and do your cleaning, change nests, etc., and also prepare for the following day's supplies, boiling your eggs and grating your bread, as there is no time for these duties during the day for busy men in this district.

How "Summer Time" Helps.

"Summer" time, with its extra hour of daylight, comes as a boon to the factory worker who is a bird fancier, as it gives him more time in the evening for these duties, and much can be done in the extra hour before darkness closes in, and he rises with the birds in time for the early morning feed.

I must now draw to a conclusion. The time is too short to touch on every detail. There is much ground that can still be covered, but it will require another evening to dwell on certain points that may arise in the discussion. I hope that my remarks have been profitable, and wish all a successful season for 1917. Our new Society is increasing by leaps and bounds, and we seem in a fair way to become one of the most flourishing clubs in Lancashire. Let us show some results this season, and when the boys come back give a helping hand and a hearty welcome to the Nelson and District Roller Club.

A lively discussion followed, and some interesting hints were brought out. The lecturer explained how he had rung young birds at three days old, when on the point of leaving home for a holiday with the birds in care of someone unaccustomed to this delicate operation. With some black thread he stitched the ring all round, and made the ring much smaller in circumference, so that it fitted the leg. Then on his return he cut the threads on the ring with a sharp knife, and found the method quite successful. One of these birds was in the prizes this time, and had it not been rung would not have been able to compete. Dark thread is best, as it passes unnoticed by the hen.

Nests of Birds, Poultry, etc., should be regularly sprinkled with KEATING'S POWDER, especially when hens are sitting. Don't forget to do this just previous to the eggs hatching, to destroy the Red Mite. Kills all insects. Harmless to everything else.

The Kea, the Kaka and the Kakapo

New Zealand Parrots which have Changed their Characters.

By L. B. THOBURN-CLARKE.

The following interesting article was contributed to Chambers' Journal and is reproduced by agreement with the proprietors for the benefit of our readers.

PERHAPS in no country in the world are the weird forms of bird-life more pronounced than they are in New Zealand. Not only are many of these bird-forms of an almost prehistoric type, survivals of early life on this globe, but two of them (the Kea and the Kakapo) have undergone a complete change to suit their environment. In other lands birds have shown extraordinary developments, both in form and feathering, under the restraining hand of man, but these New Zealand Parrots have, in a wild state and absolutely without man's interference, developed in unexpected ways.

The Only Carnivorous Parrot.

The Kea (*Nestor notabilis*) probably lived, before the British settlers arrived in New Zealand, upon the same food as its sole living relative, the Kaka (*Nestor meridionalis*)—the berries and honey from the blossoms of the rata and other flowering shrubs and trees found in the New Zealand bush, varied by insects that lived under the bark. Its brush-fringed tongue would suggest such a diet, but under the civilising influence of the settler it first became a flesh-eater, then finally developed a full carnivorous habit, and preyed upon the living sheep, this being the only case where a Parrot in a wild state has adopted a flesh diet, although in captivity Parrots frequently grow very fond of cooked meat, and eat it readily.

No one knows when the Kea first became a "hanger-on" to the sheep-station, or what first induced the bird to eat flesh. Perhaps, during a time of great scarcity, hunger may have compelled it to try the new diet, and, the taste once developed, the habit continued for ever afterwards.

It is quite a usual custom on a sheep-station for one or more sheep to be killed daily. Only the best portions are eaten, the rest, with the head and offal, being thrown down for the dogs to eat. The head, being hard and covered with wool, is frequently refused by the dogs, consequently there may be quite a number of sheeps' heads lying about the killing yard or paddock, rotting in the sun. No doubt the sight of the dogs feeding on offal may have suggested the first taste, and afterwards the bird continued eating the food which was always lying ready at hand.

I have had no experience of tame Keas, nor have I ever heard of anybody who possessed one,* but the great brown night-parrot, the Kaka, its only relative, is without a rival in its uncanny intelligence, so why should not the Kea have equal intelligence and sagacity?

The Kea, "perching itself on the sheep's head or offal," relates an eye-witness, "proceeds to tear off the skin and flesh, devouring it piecemeal, after the manner of a Hawk; or at other times holding the object down with one foot, and with the other grasping the portion it is eating, in the fashion of the ordinary Parrot."

Several of these great Parrots eating offal were quite a common sight in the killing-yards, and created no comment. The dogs might object, but they had too wholesome a fear of the Parrot's formidable beak to interfere with its feeding.

A Depraved Taste.

As no one can tell just when the Kea first commenced to eat flesh, so no one knows just when it developed a taste for the kidney fat of a sheep, and how it learnt to secure the tit-bit. This must always remain a mystery, although there are many theories to account for it.

Perhaps the Kea, tearing to pieces a sheep that had died on the mountains, found out the fat around the kidneys, and with diabolical intelligence attacked the living sheep, and, clinging fast with its claws to the wool, dug deeply into the skin and flesh of its living victim, and ate its fill of the fat. This appears the most probable theory.

Many observers, however, consider that the practice, common on sheep-stations and large farms in New Zealand, of hanging the sheep's carcass on the flagstaff, or on a pole raised for the purpose, may have taught the Kea just where to find the fat. But in this case the carcass would have been skinned and ready for cutting up before being hung up, and the Kea would have had no necessity to tear its way down to the fat.

"Nature Red in Tooth and Claw."

The discovery of dead and dying sheep with great yawning holes in their backs first astonished the sheep-owners, then worried them, for no one had the remotest idea that the Kea was the culprit. The sheep were mysteriously attacked and mortally injured, the bird being content to eat the fat and leave the unfortunate animal to die a lingering death.

When, however, the Kea was found to be the culprit, it was no longer allowed to have the run of the killing-yards, but was shot or trapped. But this did not stop the ravages upon the sheep. It is quite probable that the Keas which attacked the sheep in the first instance were Parrots that were not in the habit of coming down to the slaughter-yards to feed on the offal, but were birds that had not discovered this easy method of obtaining food.

The clinging to the wool of the terrified animal, as it rushed about seeking to get rid of its tormentor, could have been no easy matter, although the Kea is quite as large as a Raven, with claws that fit it for hanging on to anything that it has once gripped hold of.

In the face of this change of habit it seems extraordinary that our own birds of prey have not developed equally astounding tactics in securing their food. But apparently the British birds of prey still feed in the same manner as their ancestors have done for generations.

No doubt the Kea, in its attacks upon its victims, uses its powerful wings to buffet and worry the sheep. Anyone who has felt the force of the wings of even a small bird when it is battling with a foe must realise that the force behind the Kea's wings is not to be despised. The sheep is not renowned for its resourcefulness under danger, and no doubt the attack of the winged marauder simply makes it crowd among its fellows, thus offering an easy victim to the merciless foe crouching on its back.

Nemesis.

It is a pity that this large and interesting bird has become so injurious to the sheep, as it will probably be exterminated within a very short time, and follow in the wake of the many wonderful forms of bird-life which have already disappeared before the march of man's destroying footsteps.

Its sole remaining relation, the Kaka, has developed no new traits under the changed conditions of life introduced by the settler into New Zealand. Far rather does this Parrot avoid the haunts of man. Its habits are nocturnal, and, although many birds may be living in the depths of the densest bush, it is rarely seen by the bushman. I have lived for months in the bush, and have never seen one in a wild state.

Yet as soon as the twilight and sudden dusk of the southern hemisphere set in the night would be full of their shrill, piercing cries, as they winged their way to their favourite feeding grounds. Sometimes at night we would hear them in the tall trees, but as a rule they are silent except when on the wing, and then they are extremely noisy.

Even when living at Takapuna, near Auckland, although there were no tall forest-trees very close at hand, I have heard them night after night passing over, their harsh screams weirdly suggestive of uncanny proceedings up among the clouds, for even on moonlight nights I could never catch a glimpse of the flying night-parrots.

(To be continued.)

* Our Mr. Fulljames kept a Kea Parrot for some time, and exhibited it at the Crystal Palace Show of 1898, where it got vhc. The bird was fed upon ordinary insectile food, fruit, and mealworms, and refused to eat meat. The owner made the suggestion at the time that the origin of the sheep-killing habit was an accidental one. Sheep in conditions such as prevailed in Australia were frequently attacked by the bot-fly, the maggots of which burrowed into the flesh and formed a festering sore. It is possible that the birds in their search for these larvæ accidentally found their way to the fat surrounding the kidneys of the sheep and so contracted the habit referred to in the text.

Bird Life on the Doiran Front.

A Varied List and Two Puzzles.

WHAT a paradise for the student of Natural History is this apparently so desolate expanse of plain and mountain, but especially for the observer of birds. Every change in the wind brings us the trumpeting of vast hordes of Greyleg Geese echeloned in flight against the morning sky. The variety of Wildfowl approaches the teeming swarms of the Danube marshes, and but for the ceaseless depredation of the numerous Eagles, Buzzards, Falcons, and Harriers, daylight observation would yield even better results.

Mallard, Widgeon (slightly larger and darker than the British species), Golden-eye, Teal, Pochard, and Tree-duck are common, also two ducks which I cannot identify, and I should be glad if any reader can recognise my description of them: Size slightly less than the Shoveller, ruddy brown, tufted head in the male bird, sooty grey plumage, and Flamingo-pink on the underside of the wings; female, no crest and rusty brown plumage. The distinctive feature of the male is a bright vermilion and serrated bill, which is drab colour in the female. This bird is a true duck (excellent eating and a grass feeder).

Another bird which puzzles me is slightly larger than the Teal—a fish-eater with a Merganser's (Sea Goose) bill—but the male is a beautifully marked white bird with characteristic black bars round the base of the neck and a typically harlequin crest; the female has no crest, but a ruddy brown head and neck. It has duck's plumage, and is not a Grebe—is there such a small Merganser? The common Merganser is a daily visitor to the lake, as is also the Dabchick.

In the cultivated valleys the common Partridge and the French Partridge abound, hares are plentiful, and so are Blue-rock Pigeons. Wood-Pigeons are rarely seen. Woodcocks come in with the north wind in considerable quantities and are in good condition, as are also the Snipe—in fact, a noticeable feature of all Macedonian game birds is their splendid flesh.

The Black Vulture is seen frequently in the vicinity of old camping grounds, besides the Golden Eagle and Bonelli's Eagle. Montague's Pallid Harriers are common, as well as the Marsh and Glen Harriers; Peregrine Falcons are comparatively scarce, but Buzzards take a heavy toll of Mallard at dawn and dusk. The great White Heron, the Squacco, the Night and Grey Herons, the White Egret and Bittern are found in all the Doiran marshes; Cormorants and Shags are familiar denizens of the waterways and have as companion one little Kingfisher.

On ploughed land the Calandra Three-toed Lark is frequently seen with a Black-throated Tree-Lark, and all our English Finches are represented. Of soft-billed birds, Robins, Blackbirds, and Song Thrushes inhabit all sheltered spots, whilst the ravines are peopled with Dippers, Grey and Yellow Wagtails, and the interesting Sedge Warblers and Bearded Tits.

Perhaps no list would be complete without reference to our useful scavenging friends which include Magpies, Jackdaws, Rooks, Carrion and Hoodie Crows, and Ravens. Every oak ravaged by borer worms and weather acts as host to a whole tribe of Little Owls. I counted thirty-two fly out of a tree in a wood near the lake. Screech and Long-eared Owls are the constant companions of our night outposts. Of lesser birds of prey the Kestrel, the Hobby and Sparrow-Hawk; and of medium sized, the Kite, are perhaps worthy of mention, whilst the smallest, and most mischievous, of all is the Great Grey Shrike—familiar figure on telegraph post or tamarisk bush.

It is remarkable how little all our feathered friends who help to make our life so much more endurable up here, are affected by even the barrage fire of artillery. They re-occupy their usual haunts quite calmly as soon as the fire lifts.

THE NIGHTINGALE IN NATURE AND CAPTIVITY.

(Continued from page 121.)

By the kindness of a reader, Mr. O. S. Manners, Stapleford, Notts, we are enabled to republish the following interesting article, which appeared in a work published in 1799. The wording is reproduced exactly as printed, and we have thought it as well to add an occasional foot note

THE right time for catching Nightingales is in April; the sooner they are caught after their re-appearance the longer they will continue to sing. In May they are paired, and it will be a long while before they sing when caged, and then their music is but short and trifling. From sun-rising to ten in the morning is the best time for catching them; they have fasted all night, are eager after food, and greedily seize upon meal-worms.

In a wood you may easily make choice of a Nightingale which sings finest; they keep at a distance from one another, and seldom invade each other's bounds. You go the evening before you set your trap, and mark the place where you hear them; you then cut a twig about four feet long, sharpened at one end, and slit at the other, so as to hold a couple of meal-worms stuck upon a pin. Thrust the point into the ground, about twenty or thirty paces from the place where you hear the bird sing, so that he may easily espy it, and turn up the earth round the twig; this do wherever you hear a Nightingale.

Next morning repair to the place where you planted your twigs; if you find all or any of the baits gone, you may conclude the Nightingale will soon return, in expectation of a fresh supply; you therefore are to set your trap near the twig, in as private a place as you can, yet so as to leave him a full view of the meal-worm, and turn up the fresh mould, which will invite the Nightingales to come and look for worms, ants, or other insects.

If he should spy you placing the trap, you may depend on his coming to it soon after you are retired, and if he should be gone to some other place, you will soon find him out by his singing; then throw a stone at him, and he will directly repair to his former station.

When he is caught in the trap, you must carefully seize him and disengage him from the net, slipping him immediately into a little silk purse, at least six inches long and two wide, taking great care not to rumple his wings or tail, which would greatly retard his singing. To avoid the inconvenience of a net, in which the bird, in endeavouring to escape, is apt to entangle himself, some make use of a piece of thin green silk, and thus the feathers are secured from the least damage.

Having caught the bird, on your return home you are to fix the cage on the outside of your window, where you let it remain all the singing season, supplying him with meat and drink as shall be directed. The wires of the cage must be quite covered with a piece of green serge or cloth to exclude the light.

It is absolutely necessary that this cage should be exposed to the east as much as possible. The heat of the south fatigues the bird, and prevents his singing; besides, it dries him up, and he will be apt to grow blind.

Having placed the cage as directed, you must shelter him from the rain and the sun by an umbrella or a boarded covering. Some set the cage upon a small table within the window, but then the casement must be left open night and day, and nobody must come into the room but the person that takes care of the bird, who must give him his meat and drink as softly as possible, and without jarring the cage.

Thus managed, the Nightingale will sing sometimes in three or four days; he will never exceed eight if he is caught before May. You place two small cups in the cage; in the one put water, in which strew three or four mealworms, in the other put between twenty or thirty mealworms for his food.

In caging the Nightingale you must open that end of the purse next to his head. When he is half-way out you must make him swallow a few drops of water, for refreshment, by dipping his beak again and again into it; then let him slip out into the cage, closing the door after him.

The bird will for some time be sullen under his confinement, but the mealworms will soon revive his spirits and make him forget his loss of liberty. You may visit him about four hours after caging, softly open the door of the cage, take out the cup with mealworms, and supply him with fresh ones, covering the bottom of the cup with a little paste.

(To be continued.)

Correspondence.

EVERY WEEK A PRIZE OF TEN SHILLINGS IS GIVEN FOR WHAT, IN THE OPINION OF THE EDITOR OF "CAGE BIRDS," IS THE BEST LETTER PUBLISHED UNDER THIS HEADING. THE LETTER MAY BE ON ANY SUBJECT. IT MAY BE A COMMENT, FOR OR AGAINST, ON ANYTHING WHICH IS PUBLISHED IN OUR PAGES, AN OPINION ON THE POLICY OF OUR PAPER, OR MAY HAVE NO REFERENCE WHATEVER TO ANYTHING WHICH HAS ALREADY APPEARED. SO LONG AS IT IS ON A "BIRDY" SUBJECT, AND IS ORIGINAL, IT WILL BE ELIGIBLE TO COMPETE FOR THE PRIZE.

The Prize this week is awarded to Mr. J. Kershaw, Rock Lea, near Menai Bridge.

A Ringed Starling Shot.

SIR,—A customer of mine, Mr. Thos. Patton, of Kilbright, Carrowdore, Co. Down, when shooting Crows on some newly sown wheat a few weeks ago, killed a Starling which had a ring on its leg. Knowing that I was interested in British birds, he brought the ring for me to see, it is inscribed as follows: Moskwa, Ornithol, Komitet, 2768, F.

We should be glad if anyone could inform us when and where this bird was rung.

H. DONNAN.

Abnormally Feathered Mules.

Nearly Black Goldfinch Canaries.

SIR,—May I ask readers of your valuable paper, CAGE BIRDS, if any of them can account for the following incident. A Mr. Coombes, of Sandown, Islo of Wight, bred during last season two nests of Goldie-Mules, the first being quite ordinary little birds, but the second nest are practically black, just a faint yellow stripe along the wings (scarcely noticeable): these birds were fed as for young Canaries. It would be interesti[illegible] this is an unusual colour; it certainly is to me. The birds may be seen at any time

G MARSH, Staff-sergt. R.E.

How to Make Club Shows Pay.

And Create New Members.

SIR,—It has been the crying evil that members' shows as a series do not pay. I am sure if they had a booklet, say of 30 pages, easy to put in the waistcoat pocket, and a duplicate to every page, and would hand them round to all members to sell at twopence each, it would come as a good help for the open show. Also to have four selling classes, say 5Os., 20s., 12s. 6d. cocks, and 10s. hens, would bring more entries and make the show more worth seeing for members and friends, besides it would make money at both ends, and more members.

J. L. THORNTON.

Cage Making for Discharged Soldiers.

Other Occupations Suggested.

SIR,—I quite agree with Mrs. Sikes, and believe a certain number of our gallant soldiers might, with profit and pleasure to themselves and to the community, be taught cage and trap making and netting. They could be instructed by practical men, many of whom are also bird catchers and know the requirements of the craft.

When they had thoroughly learnt their new trade they could, if they settled in rural districts, go in for bird, rat, and mole catching. As a kind of relaxation they could, in due season, collect wild seeds, gentles, ant cocoons, and wasp grubs, which they could dispose of to bird fanciers and dealers. There is a great demand for well-made and reliable flight nets, clap nets, rabbit nets, etc.

H. G.

Freshly Caught Finches.

How to Get Them On To Seed.

SIR,—E. J. Brown would like to know how I save fresh caught Goldies and Linnets. It is a very simple method, and twelve to the dozen can be got on to seed, strong and healthy.

Birds caught in the forenoon should not be carried about in the kit for the remainder of the day. This is where many catchers are wrong; a catcher's day's work should be from day-break till noon; if out longer the birds caught in the early forenoon begin to get a bit thick, even if they have food and water. Of course, there are times when we don't get back till quite late, and then we must prepare before we set out on long journeys. Store cages must be roomy, with a tame Finch in each for showing the fresh-caught birds their food and water. Niger and thistle seed are of great importance for the fresh-caught birds, and if given soaked will revive and freshen them up all day.

When they are landed home place them in a store cage. Goldies should not be put a lot in one cage, four in a cage are plenty, so to be successful E. J. Brown must have a few store cages on hand; the reason for putting four in a cage is that Goldies are such quarrelsome birds, and if many are placed in a cage generally one can see scraps over the niger, and a few weak ones skulk away in a corner, and wish the rest adieu. When it is possible I really prefer two in a cage, as it avoids all these scraps.

Going back to treatment of fresh-caught birds, soaked niger and crushed hemp stand first, with teazle and Canary (soaked) in separate vessels. The floor of the store cage should have some wild seed on the grit. This is the whole secret of getting Goldies on seed. Don't forget water outside, and make sure that the drinking holes are big enough. They should be five together at each end of cage.

The same refers to Linnets, only they should have no crushed hemp; let rape (English) and charlock take its place. This can be given soaked or dry, and don't forget a little green stuff. Linnets love it, especially when first caught. Greadually wean the Finches off the soaked seed on to hard, but don't start this till four days have elapsed. Then feed on stock mixtures, and all goes well.

F. W. STOWE.

The Growing of Sunflower Seed.

A Special Prize Awarded by a Reader.

SIR,—I enclose 2s. 6d. for a second prize for Mr. Hood's letter in CAGE BIRDS of March 17 on sunflower seed. It answers in a very practical way the question I sent in some weeks ago. The prizes you offer make the correspondence most interesting, and I hope the results will justify you in often doing so in future. Of course, the letters are valuable at all times, but from the point of view of the general amateur rather a lot are given up to personal matters and to those questions which interest more particularly the charmed inner circle of specialists. We humble, but very numerous general practitioners, would like, I believe, more discussion of such matters as that raised by "Novice" (about a point of mule breeding).

A book, now out of print, which interested me very greatly, was "Notes on Cage-Birds." It consists entirely of letters of similar discussions which appeared long ago in the "Bazaar." Such a book compiled from up-to-date correspondence in CAGE BIRDS might be still more delightful, since the range of aviculture is now so greatly extended, and you can draw at all times upon a great fund of expert knowledge.

A. H. SCOTT.

[The additional prize so generously sent by our correspondent has been forwarded to Mr. H. Hood, East Harling, Norfolk. Perhaps some of the correspondents who find that most of the personal remarks are deleted from their letters before publication will note that, even as published, these letters are not of universal interest. The suggestion in the last paragraph of Mr. Scott's letter is a very good one, and we will endeavour to give effect to it when normal times come round.—Editor, CAGE BIRDS.]

The Scotch Fancy Canary.

Guaranteed Classes Offered.

SIR,—The sketch of a Scotch Fancy Canary in your issue of March 10 ought to put new energy into old fanciers, not to speak of new ones, for there are many who would like to be the proud possessor of such a bird. Respecting "Bird Fancier's Son's" letter in your issue of March 17. In reply to Mr. Dix he says that one never sees Scotch Fancies that were not good enough to exhibit. Well, for his information we may say that we see them every day, and still we keep them as stock birds, having in many instances bred better birds from these inferior birds than from some real first class show birds, that is if they have been bred of good stock. Many years ago we purchased a pair of birds for the modest sum of 25s., and the first year reared fourteen young ones, which were shown at all the leading shows in the country, and were rarely ever out of the money.

It is useless to talk of thirty years ago; we have to keep up with the times. If we want a suit of clothes we don't go to our tailor and ask for the same style of suit as our great grandfather had thirty years ago; we must have it up to date. It is the same with the bird o'circle; if we live in England or Wales we have to keep up-sides with the Scotch Fancy breeder from Scotland, the home of the old "Don," or else our birds are useless on the bench over the Border, or in the market. Do not let the Scotch Fancy Canary deteriorate back to thirty years ago, but keep it up as it is to-day, one of the grandest breeds that grace the bench. We hope to see the Scotch Fancy come to the fore again, as in years gone by, and we are prepared to guarantee a class or two at any first class show in England or Wales, tho latter preferred. If any secretary likes to accept this offer he may communicate with us, and we should like to hear from any other fancier who would like to help us in our effort to popularise the Scotch Fancy Canary.

Nets and How to Use Them.

Stoker Stowe Answers Some Questions.

SIR,—In reply to the letter of Springburn in CAGE BIRDS of March 10, in which he asked how I use side nets, and the length of poles, I would say that it depends greatly on the length of nets and width, and on what species of bird you are out for. Springburn does not say, but I conclude Bullies. The net for Bullie catching should be 18 feet by 4 feet 6 inches, and the length of poles or staves 2 feet. Keep the bait nearly up the length of net within a foot of the staves, and a foot from bottom of staves, of course, in between them.

Springburn asks if I use them on uneven ground. I do where the ground is not too rough; ground as rough as a camel's back I give a miss to, as I don't care to carry a spade or any tool for chopping off the unevenness. I say, without hesitation, that nets, side or otherwise, cannot be made to work successfully on very rough ground; tufts of grass or reeds as "Yelneh" says, are not like mounds of earth. I use my nets where I can when faced by this problem. Let Springburn try for himself, and he will be convinced.

F. W. STOWE.

A Reply to "Yelneh."

I have read "Yelneh's" letter with interest, and he is quite right in saying he would select the best pitch along a furrow, but he says he would take a bit out of the ridge to let the staves lie flat, and the ants' hills he would level a bit. "Yelneh" does not read the question I put before him correctly. I asked if he could successfully use a pair of nets 24 ft. by 5 ft. on ridge and furrow, smothered with anthills, without chopping off the anthills. "Yelneh" says he would level them a bit; therefore I conclude that the field I gave for example would puzzle him without chopping off the anthills.

I know fields in which the anthills are as thick as thistles, nearly one into the other, great giant hills a foot high; surely the catcher would want a spade to add to his kit if he was going to set in these fields. One field I know is waste land, and is as I have described. Scotch and plume thistles grow there by acres, and the Finches in early autumn would make "Yelneh" want to find some means of getting 'em. Clap nets are out of question, unless, as I have said, you chop off these great hills, and in this case the landlord wouldn't allow it, so I have for several seasons used bird lime. It is the only way to get them. Personally I do not care to use the stuff, but in places as this you must. How would "Yelneh" tackle them? His nets as described would be of no use. I gather from what he has said about them that they are a pair of side nets (only "Yelneh" does not roll up nets at back). He says the nets are much deeper than staves used, hence the quicker they are to set. I am afraid, Mr. Editor, I am taking too much space of your invaluable paper, so must tell "Yelneh" my method of using nets when space permits.

F. W. STOWE.

[An answer to J. D. Griffiths is held over, pending the making of a block to reproduce sketch.—EDITOR.]

What is a Side Net?

SIR,—I duly observed "Yelneh's" reply in CAGE BIRDS, of 3rd inst., which quite explains away the practical difficulties I would anticipate in setting nets in the manner he describes, but I am still unconvinced that the method he employs is any advantage over the ordinary way of setting clap nets. I will, however, keep an open mind on the subject, and possibly have a try when the catching season again comes round. So far as I can see, the method would necessitate shorter staves or nets than have been used in the ordinary way, in order that the requisite "slack" might be obtained to let the staves work properly.

I note what "Yelneh" says as to the uncertainty of bird catching, but I always endeavour, and doubtless so does he, to set the nets carefully on the best pitch obtainable, so that little is left to chance in the way of the nets failing to secure a catch when the wild birds come to the proper elevation. I note "Yelneh's" hint to use a coal scoop to collect the catch, but I hasten to assure him that birds are seldom caught in such quantities in Scotland as to necessitate this wholesale method of removing them from the nets.

I had a call from "Springburn" on Saturday last, and think I was able through a practical demonstration with 11 yards clap nets (along with my friend, Mr. Holden) to show him sufficient to enable him in the future to use same efficiently.

I found on enquiry that he had been using nets 30 yards long, which are, I consider, "some" nets, and I do not wonder that a novice failed to secure the desired result through their use. I have advised him to practise with a smaller sized net until he gains sufficient proficiency to enable him to use the larger sizes.

In the course of a walk in the country afterwards, I showed "Springburn" the practical impossibility of setting nets in the uneven undulating land which prevails in the district, where I think side nets would at times be most useful.

I observe that "Stoker Stowe" has again joined in this correspondence, and perhaps he could enlighten your readers as to what a side net is, the proper depth and length of net, size of staves to use with same, and the best means of setting.

I thank "Yelneh" and Stoker Stowe for their interesting correspondence on the subject.

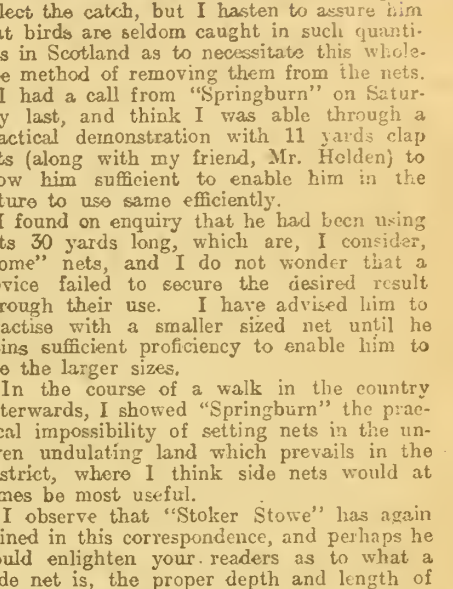
JOHN MCNAUGHT.

How to Catch Sparrows for Food.

The Bat Net and Its Use Described.

SIR,—I have noticed in CAGE BIRDS lately several references to Sparrows as food, and in view of this and other items on the same subject which have from time to time appeared in your columns, I thought a few words on the catching of these pests might be of use to your readers.

The best tool for the purpose is a bat-folding net (as per sketch), which can be made by anyone who can net and is at all handy with his fingers. The sticks are long thin hazels. These are steamed at the tops, bent, and held in position by the strings B.B., and joined at the top by the leather hinge "C." The net should be from 4 to 5 ft. square, made of thread, and of about three-quarters of an inch mesh.



The man holding the net holds it in such a position against the ivy-clad walls of a house that one of the poles is just skimming the ivy, and the other is just opposite it, and quite clear of, but inclining a little towards the wall. The other operator (for the net cannot be used single handed) stands in front of the one with the net, and beats towards him with a pole. In this way the sleeping birds are driven from their roosting places, and fly into the open net, the poles of which are immediately clapped together, the net laid on the ground, and the Sparrows extracted. In this manner you slowly work round the building on which you are operating. This method can be used on any winter's night as soon as it is dark.

I do not think that I have made it clear in my very poor sketch (the sketch has been redrawn; Editor) that the net should not be drawn tight when the poles are open, but should bag considerably. It is utterly useless to try this method on empty houses, for as soon as a house is left by its human occupants the Sparrows leave it too. As far as the edible qualities of Sparrows are concerned Sparrow pie will always be good enough for

SPANGER.

(Correspondence continued on next page.)

CORRESPONDENCE.

(Continued from page 171.)

A Fancier in Distress.

Generous Support from Fellow Fanciers.

Sir,—Mr. McLaughlin called upon me today, March 15, and handed me correspondence from Mr. Craven, of Plymouth. This gentleman has given a cock instead of a hen; Mr. Freeman, Wandsworth Common, a pair, Mr. Lloyd, Cricklewood, a yellow hen, Mr. Robson, Peckham, two hens, and, as promised, I have sent 5s. direct to him to save you the trouble of posting to him. From a report in Cage Birds, March 3, I see that Plymouth fanciers have collected 10s. 4d., and I assume this is being sent to you. Many thanks are due to you for allowing my appeal on behalf of this very genuine case.

W. Whitley.

(We have received 10s. 4d. from the sec. of the Plymouth W. Counties P.S. as stated, and also 5s. from Mr. Shearman. A cheque for 15s. 4d. has been forwarded to Mr. McLaughlin accordingly.—Ed., Cage Birds.)

Birds on the Boiran Front.

An Identification Problem.

Sir,—Enclosed find a short article taken from the "Balkan News," a paper published for the soldiers serving around Salonica, which I thought would interest your readers if you care to publish it. My many friends in and around Manchester will see that I still take an interest in bird life, although I have not been able to keep any since the war broke out. I should be much obliged if some reader would kindly name the two species described in this article.

Please convey to all who are carrying on my wishes for a most successful breeding season, both as regards quality and quantity. I will conclude by thanking you for all the good things provided week by week in Cage Birds, for although so far away I have it forwarded on to me every week.

Sergt. H. W. Scholfield.

Salonica.

[The article kindly sent by our soldier reader appears on page 170. Our friend, Mr. Spillman, of Devonport, who had received the same paper from his eldest son at Salonica, also sent us the cutting.—Editor, Cage Birds.]

A Domesticated Blackbird.

Cat and Bird as Friends.

Sir,—I hope the following history of an extraordinary pet Blackbird may interest many of your readers though it may appear somewhat incredible to some of them. I may say that I can personally vouch for its reality, having known the bird since shortly after it was taken from its nest last season, and having seen it both inside and outside its home, a farmer's house.

It was taken by a young girl from its nest in a hedge around a large field in front of the farm house in which she lives with her family. She put it in a cage about the size of a Lark's cage, and thus kept it until it grew too big for the cage, meanwhile making a full grown cat, kept in the house, understand that it must not attack the bird in any way. She then removed it from the cage, and placed it on the floor in the presence of the cat, which did not attempt to interfere with its freedom. It hopped about the floor in the presence of the cat, with which it soon became quite "pally."

When the family go to bed they leave the cat and the bird in the house, the bird perching on the back of an old chair—its own selection—standing near a chest of drawers, upon which it jumps from the chair, and sings its song in the early hours of the morning. When the chair is not in its usual place, the bird runs to and fro in front of anyone in the house, and thus asks for the chair to be placed where usually kept, and will not perch on it in any other part of the house.

It perches on its foster-mother's hands, shoulders, and head, and is quite one of the family, getting on the table during meals, picking up breadcrumbs, and accepting bits of food from the fingers of any member of the family.

Two of its most remarkable habits are going into the garden with the cat, and into the large field in front of the house, and associating with wild Blackbirds, flying with them into the hedge, but invariably returning home before dusk. The cat frequently brings home, during the breding season, young wild rabbits, showing that the destructive faculty in cats is active in it, yet it never attacks its fellow pet of the household.

When the bird requires a bath it goes to a dyke of water near the house, and bathes in it, then hops home to dry. One day it flew upon the edge of a pail half full of water, and jumped into the water for a bath. Fortunately, it was seen in the pail just in time to prevent what would have been a very sad occurrence for its foster-mother, a tender-hearted girl with an intense affection and the kindest consideration for animals, hence her success in rearing and taming her extraordinary pet Blackbird.

I saw it when just fully fledged, its colour being a dull dusky brown, which caused me to presume it was a hen. I told the girl so, and that therefore it would never afford her any pleasure as a songster, and advised her to let it go, but she persisted in keeping it, with the results as described. Knowing the general timidity and shyness of the Blackbird, I think the subject of this account a most extraordinary bird. I must add that no reasonable sum of money would induce the girl to part with her pet.

Jas. Donbavand.

The Need of a National Tribunal

A Lead Offered.

Sir,—I have been greatly interested in the correspondence recently appearing in the columns of Cage Birds on the question of the formation of a central body or association to formulate rules, etc., which would prevent or decide disputes arising in the Norwich Plainhead Fancy. This, to me, is not a new idea, as when a few months ago, in conjunction with a few friends I succeeded in organising the new specialist society for East Anglia I placed it prominently before all concerned as a possible future development.

I then had in mind the probability of the Norwich Plainhead Clubs federating, not only with a view to establishing standard rules, but also to provide a jointly patronised show where these could be actually demonstrated.

Since the question of a National Society was opened in a practical manner by Mr. Bastock many correspondents have made suggestions, which, although differing in methods, would lead to similar results. I think that if existing organisations could be utilised it would be the simplest and easiest way of dealing with the matter.

It would be necessary, of course, that the preliminaries should be arranged by correspondence, and one writer suggested that it would be impossible to get someone to undertake the management of this. Writing as Chairman of the East Anglian Specialist Club I can safely say that in order to overcome such a difficulty we are prepared to undertake the initiative in this matter and conduct it through the columns of your valuable paper, or, if necessary, privately.

If this suggestion is considered of any value, the first step would be for the specalist societies to get into touch with each other, and with us in particular, and we would then be in a position to propose a scheme for the commencement of operations. Of course the one great difficulty in all matters of this kind is the raising of funds, but if existing bird societies could be induced to federate with the specialist clubs in their vicinity, and to pay an annual subscription a substantial central fund could thus be raised.

The benefits to be gained by the establishment of a scheme such as I have indicated are really very obvious. The formation of standard rules governing classification and the acourate and clear definition of exhibition properties and points of the Norwich Plainhead would prevent unfortunate disputes arising, and simplify the work of judges. A jointly patronised show would be the means of raising the status of the Norwich Plainhead branch of the fancy and greatly enhance the value of this type. I hope that practical suggestions will be made by any of your readers interested.

J. J. Smith.

Oxalic Acid for Killing Red Mite

Beats a Painter's Blow Lamp.

Sir,—I felt somewhat ashamed of myself when I read in Mr. Beddall's letter of thanks his remarks and the manly way he acknowledged a benefit, for I have received so much information from Cage Birds correspondence without replying that I also should like to say thanks to everyone.

With regard to the use of oxalic acid, it is the only real remedy that I have found, so if I have been of service to anyone I am well repaid. My bird room and cages are now without red mite. At one time I was so infested that my birds were dying off, and after trying many experiments, and being determined to clear the pest, I purchased a large painter's blow lamp, extra big size; this not only squirted blazing fire into the cages, but also petrol. This method I continued weekly, killing hundreds, but all to no purpose, the more I seemed to kill, the more they came in swarms, and I wondered if the red mite laid eggs, and was the lamp the means of helping to hatch them.

I quite admired "Old Helpmate's" cautious note and agree that great care should be exercised to properly dissolve the crystals. I would like to mention that I have not lost a single bird from its use, and I consider that oxalic acid has saved the life of many from red mite pest and death.

Thos. Clayton.

How Lime Neutralises the Poison.

Sir,—Replying to Mr. G. J. Beddall's letter in Cage Birds of March 17th, I must emphatically repeat my statements in my previous letter of March 3, viz., that oxalic acid is, in itself, an active and certain poison, and that dipping the ends of perches into a water solution of it is running serious risks. It does not follow that because Mr. Beddall's birds have not yet suffered from its poisonous effects they will always escape such effects.

My previous letter was intended to be mostly precautionary, not only to him, but to others of your readers who might be led to make too free use of the acid. If white-wash be made with ordinary whiting (commercial carbonate of lime), and dissolved or undissolved oxalic acid be mixed with it, "boiling" (chemical action) will follow. If the white-wash be made of new lime (oxide of lime), and the acid added to it, "boiling" will not be perceptible, as there is no carbonic acid in new lime—slaked lime—to cause the boiling. Nevertheless, chemical action and combination follow, oxalate of lime being formed, which is insoluble in water or natural, internal fluids of birds, and therefore comparatively harmless, passing through the body as so much grit.

New lime, on cage boards, gradually becomes carbonate of lime (whiting) by the action of the atmosphere on it; hence the "boiling" or "frothing" which follows the application on it of dissolved oxalic acid, carbonic acid being liberated and the cause of the boiling as in the case of mixing ordinary whiting wash with the acid.

Washing soda is the commercial carbonate of soda in crystal form, and readily combines with oxalic acid, forming oxalate of soda, which is freely soluble in water or the natural internal fluids of birds, and therefore very poisonous. Linen blue is a mixture of blue colouring and washing soda, the latter being mixed with the blue to ensure the even distribution of it and to prevent flecking of linen, etc. Washing soda, as stated, being carbonate of soda, is the source of the "boiling" on the addition of dissolved oxalic acid to it.

Alum is a chemical compound of aluminium potassium and sulphuric acid. When mixed with a whiting wash (carbonate of lime wash) the sulphuric acid in the alum combines with the lime, forming sulphate of lime, and liberating the carbonic acid in the carbonate of lime; hence the "boiling" again.

If whiting, or lime wash, and oxalic acid be destructive to the red mite, why not dip the ends of perches into the mixture instead of into the water solution of oxalic acid and thus avoid the serious risks attending it?

I may add that no theory is involved in my statements, which chemists know to be chemical facts which, apparently, Mr. Beddall does not understand (no offence intended). Finally, I respectfully say to your readers, don't dip the ends of your bird perches into a water solution of oxalic acid for the reason given in the last paragraph of my previous letter.

Old Helpmate.

Inbreeding and What it Does.

One Who Does Not Believe in it.

Sir,—A little while ago this subject was left in a very unsatisfactory state, no proof being given for or against the system. Several of your correspondents said that they had known great results from its use, but these were with rabbits, cats, sheep, and other four-footed animals, also Pigeons, and they contended that what can be done with one species can be done with another. To my mind this is ridiculous.

I know a little about inbreeding, not so much from my own practice, but from observing other fanciers' experiments, and I will show to your readers that it will act differently in two varieties of Pigeons. A friend of mine, one of the most successful breeders and exhibitors of the Magpie Pigeon in his day, declared to me that he owed his success to inbreeding, and I quite believe it, of this variety, for the chief features are their long head, sparse feathers, and slim appearance, and this is what inbreeding will effect. Two other fanciers, probably with more experience in long faced tumblers than any other two living, had most disastrous results from its use. This one can well believe when this variety is noted for its broad full head, deep broad chest, and short body.

One of your correspondents gave the names of several Canary breeders who, as he stated, were advocates of inbreeding. During the late show season I have met several of them at different shows, among them one who had stated in your journal that he had been successful from the mating. We were admiring the Norwich together when he said, "Nice birds; I wish I could bred them like it; I cannot get the size." No, my friend, this is one of the things that inbreeding won't do, improve size.

Another, at a Midland Show, approached me and a few more fanciers who were chatting together, and said, "Bastock, I think you are wrong in your opinion as to inbreeding; I have had great results from it." My answer was, "Yes, it would not be the first time I was wrong," and, having known him as a breeder of Canaries for about 35 years, I thought we were going to have a revelation, so I said, "When was this?" His answer was, "When I kept black and tan rabbits" (nuf. sed).

A well-known successful West Country breeder, writing to me a few weeks back, stated without being asked that in his 27 years as a Canary breeder he had only directly inbred twice. He did not give results, but I expect it satisfied him. The mating was father to daughter.

I can well believe that a splash of inbreeding in Yorkshires and Borders would improve them, because the tendency to thin head and slim body in the Yorkshire would be an advantage and the loss of size in the Border a feature; but do not run away with the idea that this is the royal road to success, for they are more than likely to throw back to their ancestors than produce the points desired. The best mating for inbreeding is father and daughter, and the worst brother to sister. Let once suffice for several generations, for persistent inbreeding will ruin your stock, for in addition to the faults named your birds will lose stamina and vitality.

Inbreeding in the Norwich Plainhead and the Cinnamon is a different thing; it requires delicate handling, and is best left alone, taking into consideration that among the chief features are size, broad thick head, full cheeks, and deep chest; none of these points inbreeding will improve, and my advice to any fancier anticipating using this mating in the coming season is don't, but persevere to obtain the specimens with the desired features, even if you have to give more for them than their face value. It is a very easy thing to draw a pretty picture on paper upon inbreeding with Canaries, but is a very different matter to practise in the breeding room.

J. Bastock.

Linnets for Contest Singing.

And Some Questions on Rearing.

Sir,—It was with keen interest I read Mr. Allen's article on "Linnets for Contest Singing," for to me the Linnet is the sweetest of all our song birds. But there is much that is obscure to the mere novice in this article, although it may be quite plain to those who are familiar with the Linnet singing contests which are so prominent a feature among fanciers in the North of England. For instance, Mr. Allen says, "This gentleman sold me two Linnets which later produced me a strain that won all before them." Does this mean that he breeds his Linnets, or that these two birds were used to train others?

If any of your readers could tell us how to reduce the grievous mortality amongst fresh-caught Linnets it would lighten the heart of many a bird lover.

With this object in view I had hoped to overcome the trouble by rearing Linnets under Canaries, but this has not always proved successful. In 1914 I reared eight Linnets in this way, but here my luck came to an end. In 1915 I paired one of the hens to a Canary, and she reared me eight young mules, all of which, save one hen, died in the following autumn. In 1916 I tried again with Linnets, and reared thirteen (unlucky number), and these all died last autumn. No doubt there is a reason, but I am not aware of any different treatment of the birds in the last two years as compared with 1914, when they all lived. Each year they were placed in a small indoor aviary with the young Canaries.

I have sometimes wondered if Yorkshire Linnet fanciers experience the same difficulty in getting their Linnets on to seed, and accustomed to cage life. At what time of the year are their birds usually caught?

In this neighbourhood, Norwich, the Linnets seem to leave us with the approach of winter, returning in the spring. Local birdcatchers say they go to the seaside, which would seem a most inhospitable place for them at that season.

Some Mule Breeding Hints.

The Experiences of an Old Mule Breeder.

Sir,—In reply to Novice's letter in Cage Birds of Mar. 17, it is a very usual practice to take a nest of Canaries from the hens prior to introducing the finch. When this is done, it is mainly for the purpose of getting young from a particular hen or hens that have a tendency to throw light mules, in order to perpetuate the strain, and also to provide against the possibility of losing a good hen through death.

Of course, the hen will take more readily to a finch when a Canary has not been introduced at all, and if "Novice" finds difficulty in this way it is better not to put in a cock Canary for a first nest, except with the above object in view.

If it is his desire and ambition to produce light Mules, I might say that down Devonshire way there are good light muling strains, and these are frequently advertised in Cage Birds.

Naturally it cannot be expected that light muling or Sib.-bred hens can be very large, especially if they have been inbred for several generations, but such a strain may be fairly relied upon to throw light Mules to a marked degree, especially guaranteed tested hens.

There are many ups and downs in Mule breeding, and "Novice" must not be disappointed if he does not get a good light Mule in the first nest, even from a tested hen, for I have seen a hen throwing nearly all darks first, and the following nest mostly light, including a six-pointed yellow Mule. It is, however, such chance luck that makes Mule breeding such a pleasure.

I remember some 12 or 14 years ago a German hen, paired to a recently caught finch, threw what appeared to be a clear, but unfortunately the hen died before the young one was reared. I also remember about the same time sending 5s. to a Norwich firm, as per advert., for a Norwich hen, thinking I could get a rough hen for dark Mule breeding. The hen came, and turned out to be a fairly typical clear yellow, but very faint in colour, and showing meal or frosting on the surface. I paired this hen to a Linnet, and got a nest of four Mules, one to all intents and purposes a clear, but it did not live long enough to make a certainty. Another was a lightly variegated, which died at an early age before leaving the nest. The next was light under, with a white ring round the neck, and also speckled on the back; this one I reared till it was put on colour food, but lost it. The fourth was dark, except that it had a white tail; this one I reared, but it was the poorest specimen.

Old fanciers will remember the late John Williams, of Liverpool (Mule King). This gentleman came all the way to Wales "on spec" for a good thing. He saw the last two Mules. I well remember him saying that the hen was good sized, and when I told him the price he was astonished. He was, however, convinced that the hen threw these light Mules, as she was again sitting on four eggs, and the Linnet was in the same cage.

Before he left, he asked me to let him know what she threw next, and if there was anything like a clear or lightly marked of good size he was prepared to give me a good price for it, and he specially advised me to take care of the hen. Fate again came in my way, for half a room full of my birds died, including the hen, the Linnet, and some Yorkshires. The hen died while sitting on the eggs, and I attribute the loss to mice having polluted the seed. All these experiences were lessons to me, and let everyone benefit by it from to-day.

Now, as there is plenty of time yet to prepare for Mule breeding, a few hints as regards preparing the finches will be seasonable. In the first place, get finches to take soft food as well as seed. My method was to mix yolk only of hard-boiled egg and biscuit together. I did not find proportion make much difference, but preferably I used more biscuit than egg. To this was added a few drops of cod liver oil and a pinch of sugar, with some maw seed, all thoroughly incorporated, and given to both Canaries and finches.

The seeds were canary, hemp, teazle, and summer rape, all mixed. The green food I gave was dandelion, including ripe heads, and this is the best finch conditioner I know, although I am convinced that over-feeding on dandelion has a tendency to delay the moult in finches that have become too forward in condition. I am also convinced that running a finch with too many hens in a season has the same effect. Ants' eggs are a valuable food for rearing hybrids, and it is, therefore, well to get all muling hens accustomed to ants' eggs before being paired up. This method was adopted by a successful hybrid breeder in Scotland.

J. Kenshaw.

The Federation of Roller Canary Societies.

What the Leeds Secretary Thinks About It.

Sir,—I had intended under no circumstances to be drawn into this controversy, but some of the remarks made by Mr. Willows really force me to come in. In the first place, to my mind, when a man has to fall back on to private correspondence to state his case he has a very poor one, and to say the least it is not above the belt. As far as the Leeds Club is concerned, they want no defending, as everything they have done in the matter of Federation has been open and above board.

As to the Federation ousting the B.R.C.C. there should be no mistake on that point, because under Federation rules they would have the same say as any other club, and no more; that is why the Federation was formed. Nobody disputes the fact that the B.R.C.C. has done good work in the past, but the time has come now when it is impossible to go on under the old conditions, and seeing that the two-ring business was a bogey to everybody, the Federation of all clubs was the only honest way to satisfy all.

The B.R.C.C. and Midland Club think otherwise. The B.R.C.C. refused to federate and let it go at that, but the Midland Club, through Mr. Willows, after refusing to come and discuss the matter with the delegates of the other clubs at Leeds, now try to get cheap advt. through the press.

It has always been the rule that no entries should be accepted in champion and novice young bird classes if the birds were not wearing the B.R.C.C. ring. Either that or the B.R.C.C. refused their patronage. As far as standing by Mr. Hill goes, and being tied down by a handful of delegates, I think anybody who is fair will admit that the majority should rule, at least it will be so under Federation rules, but I do not think the Federation members need bother, only I myself should be very pleased to see Mr. Willows and his club members of the Federation at no distant date.

H. Best.

Some Suggestions from a Novice.

Sir,—May I be permitted to say a word with regard to the National Federation of Roller Clubs which has lately occupied so much space in your valuable paper? I hope fanciers will not be offended by the views expressed, because I am a novice and have not been in the fancy long, but I have had some experience in the management of other societies.

I am a member of a federated club, and I voted that we ally ourselves with the new body, and have purchased my rings from them for this season. Whatever its failings, it has at all events awakened the Roller Fancy to the fact that it needs reforming.

The reasons, to my mind, why all the clubs have not come under its banner are various, but may be easily summarised. Firstly, the originators of the federation scheme felt sure that all the northern clubs would join, and having, therefore, a good number of shows, did not mind whether the Midland and southern clubs came in or not. I fear under those circumstances they did not show the spirit they may have done under different circumstances.

Secondly, the British Roller C.C., who, I am sorry to say, have not been as far-seeing and democratic as they might have been, felt that they were being pushed out, and, of course, naturally ignored the scheme. They could also see far more shows in the north than in the south or Midlands—the ratio is about 11 to 3—and saw that they were greatly handicapped in the points competition owing to their birds having so far to travel, and what must be very close dates.

Now, if I may be permitted, I would like to lay before the whole of the clubs and fanciers of the country a scheme which, I think, with a little give and take, would settle the whole matter, and no one would feel at all humiliated. I give you the nucleus of the scheme, which, of course, would be put into proper shape by more expert and experienced fanciers, who are at the present head of the two organisations now in vogue. It would consist of two separate boards or committees under one head.

The head body would be called, say, the (National) or (British) Federation of Roller Canary Clubs. The two committees would be called the Northern Section of same and Southern Section of same. The head ruling body would consist, say, of two or three members of each sectional committee, with a President elected from the whole fancy.

The duties of this body would be to rule the Roller Fancy in general, such things as standard of song, national show, questions of novice and champion, and other matters they may be asked to settle by the sectional committees. The Northern and Southern Sectional Committees would each consist of one or two members from each club in such sections, with secretary and treasurer for each section.

The duties of these committees would be to rule the fancy in their own sections, such things as purchasing and supplying rings, running of all shows in such section, and to have control of points competitions, birds competing for such to be rung with rings purchased from such section, and to settle all disputes which cannot be settled satisfactorily by club committees, and to discuss and make recommendations to the (National) or (British) Federation for the improvement of the fancy.

A scheme of this sort is now needed on account of the larger shows and classes. The benefits to be derived from it would include the solving of the one-ring question, the freedom of the exhibitor and judge to exhibit and judge at any show in the country, the establishment of a moving national show, and many others I could mention, but I will leave it here for the more experienced fanciers and their clubs.

This scheme could be brought in immediately, and come in operation for the next show season, the new Federation becoming for the time being the Northern Section Committee and the B.R.C.C. the other, the N-rung birds competing for the Northern Section points competition and the B-rung birds for the Southern, and still allowing the fancier the privilege of showing at any show in the country. I leave the boundaries of these sections to the fancy. If such a scheme could be brought about I would give £3 towards a national cup.

I put these suggestions humbly before Roller clubs and fanciers, and hope they will treat them kindly, as they come only from the pen of a raw novice, but one who desires one standard of song, the choice of showing anywhere in the country, and the Roller Fancy put on a national basis.

Novice.

Queries Answered

(1)—*All questions must be clearly written in ink (or typewritten) on one side of paper, and conclude with either the correct name or a pseudonym.*

(2)—*The proper name and address in full of querist must always be written on a separate sheet of paper, and enclosed with the query.*

(3)—*Queries intended for different specialists must be written on separate sheets of paper.*

(4)—*Queries must not include or be included in orders for books, instructions re advertisements, or any other matter for publication.*

(5)—*The department to which the queries refer must be stated on the left-hand corner of the query.*

(6)—*Queries received during any week, up to the* **first post on Saturday morning**, *will be answered in the issue bearing date of Saturday in the* **following** *week.*

(7)—*If an answer by post is desired from our specialists, a postal order for sixpence must accompany any query relating to sickness of birds, or a shilling in ordinary enquiries, with a stamped and addressed envelope in either case. Dead birds must not be sent to the office (see Post-mortems).*

(8)—*All who desire letters of complaint written to advertisers must state grounds for doing so clearly and fully, and enclose a fee of sixpence.*

(9)—*All queries must be addressed to the* Editor, "Cage Birds," 154, *Fleet Street, London, E.C.4. Postcards are not admissible.*

CANARY QUERIES

Answered by CLAUDE ST. JOHN

NEST BOXES v. PANS.

R. E. B.—You have evidently written queries relating to more than one department on the same sheet, one portion of which has gone to another expert, so that I do not know the exact conditions under which your birds are kept. You should remember on future occasions that queries relating to different departments should be on separate sheets, as they have to go to different persons. Assuming that the Canaries and muling pairs are flying loose in a room or large aviary provided with shelves or staging, you would find the old-fashioned nest boxes made of wood as useful as anything, and they could be stood on shelves, etc., in quiet secluded places, and any likely attractive position, which is not too dark and dismal. Aim at the happy medium betwixt fully exposed daylight and darkness, and a place where there is a fair amount of privacy and freedom from constant disturbance. These boxes may also be hung about on the walls in quiet corners, etc., but where space is available small wicker travelling cages, such as are used for Rollers, are best for these positions, as in the event of young being dragged out of the nests accidentally, or falling out, there is less risk of injury or loss than with the boxes, where there would be nothing to prevent them dropping to the floor. If breeding in cages, the modern earthenware pans have the advantage of being much more sanitary, more easily kept in a quite clean and hygienic condition, and affording less attractive harbours for red mites than the wooden boxes. In short, the wooden box is still a good servant in rooms or aviaries with the birds flying loose, but in cages the modern pan, taken all round, is to be preferred.

SEED MIXTURE.

W. L.—Given birds in a good condition of health there is no reason whatever why they should not sing well on the dietary named in the cutting you enclosed, though for all classes of Canaries other than well-bred Rollers, at least double the proportion of canary seed is to be preferred in the staple diet. The mixture, whilst not really a bad one, presents nothing remarkable as a special inducement to song. If you have already given this method a fair trial without result, try what the following will do in this line. First of all see that the bird is kept in a fairly bright and comfortable place, free from direct cold draughts or extremes of heat and cold, and that it is not pestered by red mites. Give a staple diet of a mixture of two parts canary to one part summer rape. In addition give separately every second day a piece of bread the size of a hazel nut, soaked in cold milk, drained, sprinkled with soft sugar, and on the alternate days half a teaspoonful of a mixture of two parts each, by measure, hemp and niger; one part each black rape, white millet, and broken groats; ½ part each teazle and gold of pleasure; ¼ part each maw and sesame, and just a sprinkling in the bulk of linseed and mustard. As green food give three crisp young leaves of dandelion daily as soon as you can get them, and add to the water ten drops of lemon juice and a crystal of sulphate of soda the size of a small pea every second day during the first week. If the bird does not show signs of song in the course of two or three weeks after being under this treatment, write again and repeat particulars, and I will advise you further.

CURE FOR ASTHMA.

Asthma.—You ought to have described the symptoms as fully as you could and also said how you treat and where you keep the bird. The best and only rational cure for asthma is to eliminate the predisposing and exciting causes as far as possible, and give Nature a fair chance to root out the trouble in her own way. Once the trouble has become firmly established, medicinal treatment is, in the vast majority of cases, merely palliative, and a real cure is scarcely to be looked for. Try the following for, say, a month, and if bird is not well in that time please write again and give the fullest particulars you can about its condition and the symptoms it shows. Keep in a comfortable temperature, not necessarily overheated nor yet on the chilly side, and let it be in a fairly bright place and well aired, but free from cold direct draughts or rapid extremes of heat and cold. Give the same staple diet and seed mixture as advised to "W.L." in this issue, and in addition give separately every second day a morsel of bread and milk with two drops of cod liver oil emulsion on it and sprinkled with maw seed and a pinch of the mixed seed on the alternate days. As green food, give a small spray of watercress or chickweed, as soon as you can get the latter, three or four times a week, and when you cannot get it, substitute a morsel of banana or boiled carrot. In the drinking water add six drops of syrup of rhubarb and a crystal of sulphate of soda, the size of a small pea, every second day for a week, and after this give instead four drops each of the oxymel of squills, ipecacuanha wine, tincture of lobelia, and sweet spirit of nitre, every second day for a fortnight.

GREENHOUSE AVIARY.

J. T.—(1) Judging from the particulars given in Nos. 8 and 9, I should say the greenhouse is quite capable of being fitted up as a quite successful aviary. (2) If, as I assume, the structure is fairly exposed to the sun, it would be advisable to cover the roof, and possibly also the side facing south with "summer cloud" shading to temper the direct rays of the sun in summer, which, with efficient ventilation to prevent too great extremes of temperature, should be all the shading that is necessary. (3) In all probability the two ventilators that sufficed to maintain a vigorous and healthy growth of plant life would also suffice for the needs of the structure when fitted as an aviary. If anything more should seem necessary during sultry weather in summer, there are doubtless lights on the roof which can be raised, and these could be taken advantage of by simply taking the precaution of covering spaces on the inside with fine netting to prevent the escape of the birds when the lights are open. (4) In addition to the two branches, you should fix up a number of short perches, say about a foot long, by means of small brackets, in any suitable position around the walls. The number is unimportant, but if the perches rather exceed the number of birds flying loose, it will help to reduce the probability of quarrelling over them. You might also place in any suitable position a small twiggy branch or two stuck in pots of soil as supports, and a swinging perch or two suspended from the roof might be added if appreciated. The appearance of the whole when finished, and its convenience for the birds, may be the ruling guide in this matter. (5) The nesting places should be hung about the walls, in corners, and moderately lit places, not too bright nor yet too dull and dismal, and they should not be where the hens would be exposed to constant overlooking and disturbance. A few flat-bottom nest boxes may also be placed in secluded places about the staging. (6) The only objection there could be to keeping a few better-class Canaries in cages on the staging, in addition to those flying loose about the aviary, is that the cages would probably soon become unsightly from soiling from droppings from the birds flying about. Apart from this, if you took the precaution to get birds for the cages that had been bred and reared in normal conditions of temperature, they should succeed quite well under these circumstances. (7) To stand a fair chance of breeding successfully with the Canaries, you would be well advised to leave British birds alone, or rather bar them from this proposed community. If you specially desire to include them, the most I would advise would be a cock Linnet, Goldfinch, or Bullfinch on the straw chance of getting a brood or two of Mules, but on the whole the chances of success would be increased if they were omitted. (8) Answered in No. 1. (9) It would not be necessary to remove the hardy ferns from beneath the staging.

SILENT COCKS.

E. Smalley.—(1) You cannot do better than keep the bird in a quiet and restful condition for the present, and in a comfortable temperature. Otherwise continue to carry out the general treatment advised in last reply, save that you may go on giving a morsel of bread and milk sprinkled with soft sugar three times a week for a month or so. The shock of the fall is doubtless the cause of it going off song, and no one can tell just how these cases will turn out. Sometimes they get all right in the course of a week or two, but others will be literally, years and never utter a note after such a shock. (2) Being in the vicinity of other birds would not necessarily stop these birds singing if they are really cocks and in good health. The effect of hearing or seeing other birds around them, especially at this season, is, as a rule, quite in the opposite direction; that is, to incite them to excessive song. There certainly are cocks to be met with of this retiring and silent mood, but they are comparatively rare. At this season, if the bird are healthy and in breeding condition, you may be able to make a final decision by comparing the shape of the vent with that of a known hen and cock. By catching the birds and blowing aside the feathers of the abdomen, you will find that the ve

(Continued on next page.)

QUERIES ANSWERED.

(Continued from page 173.)

of the cock is dried up more prominent and pointed than that of the hen, the latter being flatter and lying more in line with the abdomen. (c) Assuming the birds are healthy and active, if you fail to make a decision by the above means you could, of course, mate them with known hens in good breeding condition and waiting to go to nest, whilst should be a certain means of discovering the true sex. If they are ready cocks, their silence, if otherwise healthy, would be no bar to their successfully fertilising eggs.

MAKES NO SOUND.

H. A. C.—I am rather inclined to think the bird is a hen. Still, try the following for two or three weeks. In addition to the usual cleanly, give a morsel of bread and milk with two drops of cod liver oil emulsion on it and sprinkled with soft sugar, every third day, with pure water to drink on these days, and on the intervening days give the following concoction to drink instead of plain water. Place half a teaspoonful of linseed in a teacup and a piece of Spanish liquorice as large as a small marble, fill with boiling water, cover, and infuse for an hour beside the fire. Then strain off the clear fluid, add a small teaspoonful of lemon juice, and the same quantity of pure honey; stir until dissolved, and give in the water vessel instead of pure water.

BARE AND SCURFY HEAD.

Mrs. Blackham.—Keep the bird in a fairly warm place, but see that the temperature, whatever the degree, is fairly equable and not subject to violent fluctuations, and see that the cage is free from red mites and kept in a nice clean condition and strewn with gritty sand. Allow the bird to bathe freely in fair weather. In addition to the staple seed diet give a morsel of bread the size of a hazel nut, soaked in cold milk, drained, slightly dusted with flowers of sulphur and then sprinkled with soft sugar every third day for a month. On the intervening days give first a morsel of banana or boiled carrot, and next half a teaspoonful of the seed mixture advised to "W.L." in this issue, and two crisp young leaves of dandelion, which you may find in sheltered nooks, or under hedges now. In the drinking water, every second day for a fortnight, and after that every third day for the remainder of the month, add ten drops of lemon juice and as much chlorate of potash as will cover a sixpence. You may also slightly moisten the bare skin with a little Lanocylin ointment, and then dust on a little dry boracic powder twice each week.

"BLISTER" ON WING.

Constant Reader, Belfast.—The trouble you describe is undoubtedly a serous abscess, and full of a thin clear fluid. The trouble is not an easy one to cure, on account of the frequent return of the so-called blister, unless the case is treated by a skilled person who can either administer injections or do a little surgical operation to eradicate the root of the trouble. It is not quite a case that lends itself to amateur treatment, and it is really a question as to whether the bird is worth the cost of placing it in proper hands, such as a vet., for treatment. If this is not the case with yours, you may try the following treatment on the chance of it assisting Nature to get the upper hand and throw off the trouble. Prick the blister with a rather coarse and quite clean needle, then gently press from the side to remove the contents. Bathe clean with a little warm water and then touch the spot with a camel-hair brush or the tip of a small feather dipped in tincture of iodine. Should the

CANARY QUERISTS

should consult St. John's "Canary Breeding for Beginners" (7d.); House's "Canary Manual" (1/2); Baltye's "Yorkshire Canaries" (1/1½); House's "Norwich Canaries" (1/1); Weston's "Stock Book" (7d.); Dr Clarke's "Septic or Bird Fever" (7d.); Norman's "Aviaries, Bird-rooms, and Cages" (2/3); Ramsden's "Colour-feeding" (3½d.); "Seeds and Foods for Cage Birds" (1/2); or the "Nutshell" booklets (2½d. each); No. 5 "The Pet Canary," No. 6 "Ailing Birds and How to Cure Them," No. 9 "The Disinfection of Cages, Bird-rooms, etc.," No. 10 "The Roller," No. 23 "The Border Fancy," No. 24 "Green Canaries." All thoroughly practical and instructive. Prices quoted are post free, from "Cage Birds," 154, Fleet Street, London, E.C.4.

blister come again repeat the operation after a week or so when it appears filled with the fluid. You might well be a little more generous with your dietary. In addition to the staple dietary, give separately every third day for a month a piece of bread the size of a hazel nut, soaked in cold milk. Drain two drops of cod liver oil emulsion on it and sprinkle with soft sugar, and on the intervening days give first half a teaspoonful of the mixed seed advised in reply to "W.L." in this issue, one day, and the next give a morsel of banana (preferably), boiled carrot, or two or three crisp young leaves of dandelion. In the drinking water add ten drops of lemon juice and a crystal of sulphate of soda the size of a small pea, every second day for a week; and after this give six drops of tincture of gentian and four of dilute sulphuric acid every second day for a fortnight.

WHAT IS A PAIR?

B. F.—(1) Yes, it is quite possible to rear young Canaries on the biscuit food you mention as a substitute for the ordinary egg food. Many fanciers have used it successfully in this way in past years, so there is certainly no reason why you should fail. With regard to the main question as to economising eggs, you might note reply to "Novice, Birmingham," in the issue of March 10. (2) When dealers offer so much "a pair" for Canaries in their advertisements, I take it that "a pair" means a cock and a hen, which need not necessarily be unrelated. Dealers, you see, do not buy the birds to breed with them as bought, and they should have unlimited opportunities for making up unrelated bird pairs, so that it is quite immaterial whether the pairs are made up with related birds or not when they buy them. But, perhaps some dealer may see this, and if I am wrong, state the fact and say just what is meant by the trade term "a pair."

ABOUT AN AVIARY.

Yellow and Buff.—I think you would be best advised not to leave the open space you propose in the roof of the flight with the object of growing something in the flight. The idea, I assume, is to plant a tree of some kind to grow up through the roof, and if so the disadvantages would far outweigh the advantages. I note you mention covering the space loosely with canvas, which would not be at all a safe method unless it were also covered with wire or netting firmly secured, to provide against accidents when storms came. There could be no objection to fixing up a small fountain and bath in the centre of the flight, and if you wish any further decoration you might plant a clump of marrow, or some such lush-growing vegetable, and a few marigolds, after they have grown outside to a fair size would be useful for the birds to peck at, if they would allow them to come to the blooming stage. But that is a very big "if." As a whole the aviary will do very nicely without any alteration, though if it is of a fair height, which you omit to state, the ventilators would have been all the better for being an inch deeper; that is, 6in. by 3in.

BRITISH BIRDS, MULES AND HYBRIDS

Answered by H. NORMAN.

BULLFINCH MOPY.

M. E. W.—I fear you have not been feeding your Bullfinch properly during the winter months. I would advise you to put five drops of syrup of buckthorn in his drinking water and let him have it to drink for two hours daily; then two days later procure equal quantities of tincture of rhubarb and tincture of gentian, and put 20 drops in two tablespoonfuls of water. He should have this to drink for about five days, giving it fresh daily. As regards his feeding, make up a staple mixture of two parts canary, two parts teazle, and one of summer rape, and give daily a few sunflower seeds. When you discontinue the medicine, feed pretty liberally upon wild food, dandelion in particular, both the leaves and the seed pods, as soon as you can procure them. Have you our Nutshell booklet on the Bullfinch?

MULE FEATHER EATING.

E. Knap.—Your trouble with the Greenfinch Mule is rather unusual, although similar cases occur occasionally. First of all, make a complete change in your manner of feeding. Discontinue the linseed and niger from the staple food, and offer half-a-dozen good sound sunflower seeds three days a week. On the other days give a spoonful of soaked rape and teazle, made in the following manner. Pour hot water on the quantity required, let it stand an hour, then strain off as much water as possible, and let it stand all night. If not dry enough to use in the morning just dust it with a little plain biscuit. I would also advise you to try your bird with some kind of insects, mealworms are the handiest just now, but later on you will be able to collect some

BRITISH BIRD & HYBRID QUERISTS

should consult Moulton's great work, "Cage-Bird Hybrids" (1/6); Norman's "British Bird Manual" (2/3); or Part 1 "Harabills" (1/1), Part 2 "Softbills" (1/1); "Aviaries, Bird-rooms, and Cages" (2/3); "Seeds, Foods, and Wild Plants" (1/2); "Secrets of Hybrid Breeding" (1/2); Clarke's "Septic or Bird Fever" (7d.); "Colour-feeding" (3½d.); or the "Nutshell" booklets (2½d. each), No. 1 "Goldfinch," No. 2, "Linnet," No. 3 "Skylark," No. 4, "Song Thrush and Blackbird," No. 11 "Bullfinch," No. 13 "Chaffinch," No. 15 "Greenfinch," No. 22 "Siskin, Redpoll, and Twite," No. 25 "Small Insectivorous Birds," No. 26 "Large Insectivorous Birds," No. 6 "Ailing Birds and How to Cure Them," No. 9 "Disinfection of Cages, Birdrooms, etc.," No. 12 "How to Moult British Birds." All thoroughly practical and instructive. Prices quoted are post free from "Cage Birds," 154, Fleet Street, London, E.C., 4.

from the garden, particularly green fly. Your one piece of watercress per week is not sufficient; give it every other day, or young dandelion leaves, chickweed, and other wild food. Catch the bird and carefully examine him for insects, as these might cause irritation. It would be as well to change his quarters, say, into a larger cage in a strange room, and hang a chicken's feather on to the cage by a piece of string; it will possibly amuse him and assist in helping him to discontinue the plucking.

FEEDING A SONG THRUSH.

Song Thrush.—You can feed your bird on either of several mixtures, but I may say that the better the food the healthier the bird will be and the more song you will get out of him. Undoubtedly insectile food is the best, composed of ants' eggs, dried flies, etc. You can make this yourself, but as you have only the one bird it would scarcely pay you to do so, and most dealers sell it. Get the best; it is the cheapest in the end. For a change you can add a spoonful of fine crissel or meat meal to crushed puppy biscuit, and soak in hot water, adding occasionally a little hard-boiled egg. You must also offer mealworms and insects from the garden, such as small caterpillars, beetles, gentles, etc., and a little fruit when procurable. With this treatment he should soon come into song. Our Nutshell, No. 4, on this bird, would assist you; post free from this office, 2½d. Yes, the cock Twite sings; its performance is somewhat like that of the common Linnet, although scarcely so musical, nor so strong. You cannot do better than treat it as you would the Linnet.

SAMPLE OF WILD SEED.

J. Taylor.—I did not detect any unpleasant odour in the small sample of wild seed mixture sent to me. The earthy taint may be caused by the presence of particles of earth, which is usually found in most wild seed mixtures. I would advise you to sift some of it, and then test it; if you have any doubts, wash and soak it and use it when just sprouting.

AVIARY FACING EAST.

Sussex.—You will be quite safe in erecting your aviary with the eastern aspect, as the high wall will be a great protection to it, and if you have room you could still further protect it by planting a few evergreen bushes, such as box, along the front. In planning it I would advise you to have part of it boarded up, so that the birds can find additional shelter from rough winds. Of your two suggested positions I would prefer the one nearest the house as the other one would be anything but comfortable when the wind was in the North-East. Perhaps you would like to send me a sketch of your proposed building. I may be able to offer one or two suggestions.

BREEDING WITH GOLDFINCH MULE.

Wm. Murray.—You make a mistake to keep changing your hens about. They should all be in a three compartment cage, with the Goldfinch in the middle compartment. If you cannot arrange it so, you can possibly put them in separate cages quite close to each other; then when one of the hens is ready to go to nest the Goldfinch should be run in with her, and when she has had put him with the other hen. It is a mistake to keep two hens together when they do not agree, they are at this time particularly spiteful and likely to do each other an injury. Your breeding appears to be all right, but do not overdo the hemp seed to the hens. A little soaked seed twice a week is beneficial to both hens and Goldie.

MORE MULE QUERIES.

Fresh Starter.—Your Bullfinch hen will be all right in the aviary; if she pairs at all it will probably be with the Greenfinch, but if she paired with either of the others and you happened to rear the young, they would be still more valuable, so you see you cannot do wrong by leaving them as they are. As regards the British birds and Canaries in the other aviary, you cannot anyway be sure how they will pair; you will possibly get Mules from both the Goldie and Linnet, but you can in no way regulate the matings when they are flying loose. If you are desirous of any particular hen breeding with either the Goldie or Linnet, you must pair her up with your selected partner, and keep them caged during the season.

TRUSTING FINCH WITH EGGS.

R. E. Baldwin.—It is rather risky trusting a cock Goldie with valuable eggs unless he has been tested. It is much safer to run him away from the hen each evening, removing the first three eggs; after that he can be taken away altogether. You could try him later on with one or two clear eggs in a nest. If it is inconvenient to remove him at night, you could keep him away altogether after the first egg, but one likes to make as certain as possible of the fertility of the eggs, as a full brood is always better than a single bird; they are reared more easily, and there is no time wasted.

FEEDING A BUNTING.

Andrew Marr.—The Yellow Bunting is not a difficult bird to feed; he is particularly fond of canary seed, and does not care much for the others. If you added three spoonfuls of somd canary to one of the Finch mixture, that would do for him capitally. You could offer a spray of green food occasionally, also a little soft food, and a mealworm or two or other small insects.

FOREIGN BIRDS.

Answered by WESLEY T. PAGE, F.Z.S.

WHAT PARRAKEET?

D. I. P.—Most of the genus Psittacula are very similar, differing only in plumage as to the intensity of their coloration and extent of blue areas. However, I think your bird is a cock Passerine Parrakeet (Blue-winged Lovebird). Most of the smaller Parrakeets are very fond of spray millet (millet in the ear), and it is very good for them, but is more costly than loose seed. It will be beneficial to supply them with a spray twice a week. The other portion of your dietary is satisfactory. Yes, they should breed and do well in your outdoor aviary. The hen has no blue in her plumage, and the green of sides of face and underparts is more or less tinged with yellowish. All foreign birds are more or less scarce nowadays. An advert. for a hen in our columns would be your most likely means of obtaining one.

BREEDING BUDGERIGARS AND ZEBRA FINCHES

Esperance.—Yes, you can introduce the husks at any time, but your hen, which has been kept indoors during the winter, must be kept in a cold room (i.e., one without artificial heat) for at least a week before being put outside. Any hen that comes direct from an outdoor aviary can go outside at once. The Zebra Finches in our uncertain climate must not go out before May 1st, unless the spring should prove unusually early and settled. The hen appears to have caught a chill, and you should keep them in quite warm quarters for the next three or four weeks, and then gradually harden them off for a fortnight before turning them out. Make the drinking water just saline with Epsom salts once a week, and three times a week lightly colour the drinking water with chemical food. The present month is always a trying period with birds, whether kept indoors or out, as the weather vagaries usually cover a succession of rapid changes—gales, storms, high and low temperatures. Warmth will be the best tonic you can give the Zebras for the next few weeks. What you refer to is merely owing to the cock being anxious for the hen to go to nest, and as yet she is not sufficiently fit.

GREEN AMAZON DULL AND STUPID.

E. G.—You must continue the treatment already advised till the bird is quite fit again. Seed mixture and ripe fruit should form the staple dietary, but such extras as nuts (in variety), biscuit, crusts of bread, plain cake, raw carrot, or a piece of dry boiled potato. Parrot grit and cuttlebone must be continually in the cage, also a chunk of wood for it to exercise its mandibles upon. As soon as the bird gets fit and lively again, begin to train it by the constant repetition method, repeating to it, when it is in restful mood, any short sentences or words you wish it to repeat. It should also, as it already talks a little, pick up many words and phrases which are continually being spoken around it, and in like manner mimic calls and sounds. If it is a youngish bird it should materially improve its vocabulary, but a change of home often checks development, though this difficulty should have been passed by now. Speak to it endearing words and phrases while you are attending to its wants, and also when you give it any tit bits. Many of these it should ultimately pick up. I trust the bird will continue to do well and improve.

BREEDING BUDGERIGARS IN BEDROOM FLIGHT.

A. C. M.—The Budgies should do well in your flight ultimately. You must keep them under as close observation (not disturbing observation) as you can, and ascertain the cause if possible, i.e., see if the birds are fighting among themselves and if one or both pairs are equally responsible for the loss of the eggs. If one pair, or one bird only, are delinquents, then such had better be changed; it is very probable, however, that you will find that the weather conditions prompted the bird's behaviour. I am presuming that the husks are infested with life. If so, boil the husks and replace when thoroughly dry. Of course, one cannot give outdoor green food while the frost lasts, but I do not favour watercress much myself, owing to the conditions under which it is mostly grown, but use sweet apple as green food for the winter months, though in most large towns and villages one can procure fraine lettuce from the greengrocer. As soon as weather permits, supply the flowering and seeding heads of grass ad lib. Put your birds on a course of chemical food, lightly colouring the drinking water every other day with same. Once a week put one teaspoonful of fluid magnesia in the water. If egg-binding occurs, take the affected bird and put it in a small cage, stand this on the top of kitchen range till the bird has voided the eggs, and then gradually cool her down. So long as the cage is not fired the heat will not be too great. I do not know how your perches are arranged, but fix matters up so that they must fly to get from one to the other, as the more exercise they take, the less you'll be troubled with an egg-binding. Millet sprays are good for them, and these are advertised almost weekly under "Foods" in our columns. Hang these up—not to the branches, but suspend them on string, so that the birds must fly to them, and cling like acrobats thereon while they pick out the seed.

YOUNG GREY PARROT AND WOOD-CUTTING.

C. W. H. G.—(1) No harm is likely to result from its eatting up and eating wood of a non-splintery character. Wood with the bark on (a chunk of a thick branch), which has begun to decay is excellent for it. (2) Your mixture is an excellent one, but it would be improved by adding two parts of oats. It should also have ripe fruit, nuts (shelled), biscuits, dry pieces household bread, and plain cake, but do not give any tea, coffee, or milk sops, table scraps, or any kind of animal food.

YOUNG PARRAKEET WITH BARE FACE.

L. A. Dixey.—You do not say how you have been feeding the bird, nor what kind it is. Spray the bare parts (bathing would be better if you can handle it) with a solution of tepid water and Condy's Fluid. Put one teaspoonful of fluid magnesia in the drinking water every fourth day, and on the intermediate days lightly colour the drinking water with chemical food. Give both honey and borax, and cod liver oil emulsion thinly spread upon bread, biscuit, or plain cake (or anything similar the bird will eat) daily, but not both spread on the same piece of bread, etc. Give one in the morning and the other in the afternoon, a piece of bread or biscuit slightly damped and then lightly dusted with flowers of sulphur, will also help a young bird materially. I cannot, of course, pretend to advise you how to feed it when I do not know the species, but do not give it table scraps, slops, and messes, etc., of any kind. It will be well to keep it in quite warm quarters, but not in a stuffy corner, and it must not be subjected to draughts or cold winds. Its cage should be covered up at night round the sides entirely, but a space of three or four inches' diameter at the top should be left uncovered for ventilation.

POST MORTEMS.

Mr. G. Yates, M.R.C.V.S., 1, College Road, Harrow, Middlesex, will examine and report upon dead cage birds for a fee of 1s. 6d. each bird; for reply direct, 2s. 6d.; analysis, 21s. The Post Office regulation is that bodies of birds must be sent at the letter rate of postage, and must be packed in hermetically-sealed receptacles which must themselves be enclosed in strong wooden, leather, or metal cases. If this regulation be infringed the packets may be destroyed by the authorities. **Any bodies sent to the office of this paper will be thrown away, and if a fee is enclosed the loss will be the sender's.**

GENERAL.

Answered by THE EDITOR.

THE PAYMENT OF RAILWAY CARRIAGE.

Rev. G. H. R., and Others.—As the Railway Companies will on and after April 2 require the prepayment of all parcels which are to be conveyed by passenger train, our rule No. 9 at the head of the advertisement columns will become void, and a new rule will be made to the effect that either the prices named in advertisements must be understood to be inclusive of carriage to purchaser, or it must distinctly stated that carriage must be added to the price.

FOREIGN BIRD QUERISTS

should consult Page's "Foreign Birds for Beginners" (1/1½); Arthur's "Budgerigars and Cockatiels" (6d.); Arthur's "Parrots for Pleasure and Profit" (7d.); "Aviaries, Bird-rooms, and Cages" (2/3); "Seeds, Foods and Wild Plants" (1/2); Dr. Clarke's "Septic or Bird Fever" (7d.) All thoroughly practical and instructive. Prices quoted are post free from "Cage Birds," 154, Fleet Street, London, E.C., 4.

THE STOCK BOOK

Simplifies the operations in the Bird room and makes it possible for everyone, even the veriest novice, to breed his birds as they should be bred. It affords facilities for the recording of the complete pedigree of all your birds; of your experiences during the season; an account of every bird reared. Contains also Pedigree, Breeding, Young Bird and Show Registers of simple and unique character, Cash and Profit and Loss Accounts for the year. Gives valuable hints for times of emergency during the breeding season.

Price 6d., from your Newsagent, or 7d. (postal order), post free, from "CAGE BIRDS," 154, Fleet Street, London, E.C. 4.

Offices: Idle, Bradford, Yorks

(Adverts. continued from page 166.)

EXCHANGE, pair high-class Norwich, value 15/-, for housemoulted cock Goldfinch; approval: Hulatt, 68, Welington-st., Gainsboro'. (882)
TWO large cock Goldfinch Mules, 10/- each; exchange two good feeding hen Canaries for cock Goldfinch: Dunn, 18, Hill-st., Newport, Mon. (882)
EXCHANGE, pure Welsh Mountain cock Goldfinch, good bird, for clear yellow Yorkshire hen, long bird, 1916 bred: Peters, 30, David-st., Blaengarw, South Wales. (881)
EXCHANGE 2 Bullie hens, 1 Greenfinch hen, 1 Linnet hen, 1 Goldfinch hen, for homing pigeon, cock, no rubbish: Evans, Bachelors Walk, Lisburn, Ireland. (882)
EXCHANGE, two hand-reared Grey Linnet hens, tame, unflighted, for British Finch cock, or cash offer; yours first: Henry, Halcyon House, North-st., Bridlington. (878)
WANTED, exhibition cock Siskin, will give large house-moulted cock Linnet and yellow hen Canary; Siskin first; no rubbish wanted or given: Nicholson, Ivy House, South Parade, Northallerton. (878)
EXCHANGE, double breeder, large flight, and mouster field moulted cock Linnet, sure winners; 3cwt. bird sand, best on market, for good pair Norwich; approval: Burns, 84, High-st., Fresserburgh. (881)
FIVE grand cock Bullfinches, from 4/-; one piping lovely, 6/-; two muling hens, 2/-, 3/-; two Goldfinch Mules, Finch note, 7/6 and 14/-; four good Linnets, singing, 2/6 and 5/-: F. Trott, 124, Sumner-lane, Birmingham. (881)

Mainly Foreign.

BEAUTIFUL large brass cage, 7/6; also small Parrot cage, 4/6, or exchange Foreigners: Hedges, 23, Lansdowne-rd., Hounslow. (880)

Miscellaneous.

EXCHANGE Norwich show cages and cases for Borders: Butcher, Eastover, Bridgwater. (881)
SEVEN breeding cages, exchange .22 rifle: Charlesworth, Newsagent, Victoria-st., Holmfirth. (885)
EXCHANGE half grown Persian kitten for singing cock Canary: Butcher, Eastover, Bridgwater.
CABINET Turkish bath, excellent for rheumatism, price £3 3/-: Pope, 60, Palace-rd., Streatham Hill.
BIRDROOM lamp, 12/6; exchange for birds or gramophone records: Ellis, 42, Eastone, Bridgwater.
WHAT offers in hens, Norwich, for 36 Hobbies books and designs?: Eves, Paroma-rd., Belvedere, Kent. (882)
GOOD Turret, 1 doz. records, brass cage, exchange for Rollers; offers: Worrell, Church-st., Annfield Plain. (886)
PAIR heavy wattled Black Carriers (Pigeons), £1, exchange Canaries, British, records: Leigh, 39, Queen's Gardens, Brigthon. (880)
WELL exchange cages, rack and fittings, value 50/- for cycle or sewing machine: Delves, Cycle Engineer, Paddock Wood, Kent. (879)
EXCHANGE, gent.'s bicycle, value £10, for champion crest or Crestbred hen to value, £10: B. W. James, 7, Redcliffe-rd., Nottingham. (881)
WILL exchange 24 volt accumulator and cash for good brazing lamp, or stocks and dies: Delves, Cycle Engineer, Paddock Wood, Kent. (879)
EXCHANGE high-class Homing Pigeon, recently cost £2, for a pair of Norwich or Rollers to value: Williams, Church Island, Menai Bridge. (880)
GENT'S second-hand navy blue serge suit, nearly new, waist 42, leg 31; exchange common Canaries: Tomson, 111, High-rd., Willesden Green. (885)
WHAT offers in Linnets or Norwich hens, for 41 books of Canary and Mule breeding, coloured plates in each: Harrison, 28, Coventry-rd., Bulwell, Notts.
EXCHANGE, joiners' tools, second-hand, in good working order, for Canaries, British, and mealworms; tools sent first: Kerins, 28, Surrey-st., Glasgow. (881)
FEW most up to date 56-inch double breeders; exchange songsters, one each cage; sell 10/6 each: Dey, 5, Carleton-terrace, Halton-road, Islington, N.
EXCHANGE, draughtsman's drawing instruments, board, and squares, value 25/-, new, for two Yorkshire cocks: Cooper, 6, Castle Houses, Landore, Swansea. (883)
BLOUSE lengths and fancy collars given for healthy Canary hens; what offers Foreigners, for 50 or 100 "Cage Birds"?: Evans, 39, Easton-st., High Wycombe. (875)
EXCHANGE two new double 8in. door locks, right and left, for large typical cock Goldfinch, with good blaze and markings, sell 9/-: Livingston, Langside-rd., Bothwell. (884)
EXCHANGE, breech-loading rifle, cartridge ejector, 380 bore, long range, good condition, for pair English Rollers, value 20/-: L. Powell, Page's Close, Histon, Cambs. (878)
WHAT offers in Canaries for gent's suit length of good tweed, or sell 25/-; or lady's costume length, or sell 12/6; approval: McKeand, Seabright Villa, Castle Douglas. (837)
ONE pair real flannel undershirts, new, 6/-; pair lady's black shoes, sixes, new, 4/-; doz. double-sided records, 8/-; or exchange: Knell, 20, Montreal-bldgs., Poplar E. (879)
GENT'S massive silver English lever watch, in perfect condition, correct timekeeper, cost 5 guineas, accept 25/-; exchange birds: Wells, 61, Mount-st., Chorlton-upon-Medlock, Manchester. (884)
THREE pairs show Dragoons, with winning cards, for a good pair of Yorkshires or Goldfinches, or anything useful; approval both ways: W. Hopley, 26, Wootton-st., Bulkington-lane, Bedworth.
WHAT offers in Canaries for magnificent set of new black wolf furs, latest fashion, large muff and stole, with heads and tails, worth £6 6s.?: Mrs. Harrington, Dalmeney Cottage, Dunstable. (823)
TROUT rod, reel, line, 12 hooks, 11 casts, small float, for cock Roller or two hens, or sell 10/-; also pair nickle-plated roller skates, for same, or sell 10/-; hens first: A. Walls, 7, Springclose-row, Emsy-rd., Leeds. (882)
EXCHANGE, four volumes, Great War, value 30/-; also pair Buffalo horns, length 5ft. 10ins., 35/-, worth double, beautifully polished, for Canaries, Mules; exhibition hardbills, or poultry: Whitford Brynogwy, Nantymoel. (880)
WANTED, pair good young Rollers for breeding, exchange gent.'s wristlet watch (luminous), good timekeeper, in perfect order; birds first; approval both ways; particulars: Plumtree, Normanby-rd., Scunthorpe, Lincs. (879)
WANTED, offers Canaries, exchange overmantel, 4 ft. 4in., by 3 ft. 2 in., sell 20/-; Wheeler and Wilson hand sewing machine, in good order, 25/-; new electro-plated teapot, pretty design, 5/-: Dawson, Blyburgate, Beccles. (886)
GENT'S cycle, with 2 lever brakes, tyres in good condition, free wheel, 27/-; Dr. Macaura's Blood Circulator, 14/-: mechanical motor-car, good shop attraction 9/-; pair of rubber shoes, suitable for sea fishing 15/-; or exchange: E. Rutland, Ash Buyer, 118, Butter-st., Oldham-road, Manchester.

BRITAIN'S BIRDS AND THEIR NESTS.

Described by A. LANDSBOROUGH THOMPSON,

With Introduction by Professor J. ARTHUR THOMPSON.

Contains 132 Coloured Illustrations by GEORGE RANKIN.

15/- net; per post 15/8.

"A magnificent bird-book; one of the finest productions of its kind."—"Morning Leader."
"Admirable coloured plates. The birds are accurate, life-like, and effective."—"Times."
"The plates will undoubtedly ensure for the book much popularity. They are most interesting to the student of Nature, and they will also be very helpful to the young ornithologist feeling his way towards a more mature knowledge of the bird world. The letterpress is as interesting and as well-informed as the plates are accurate and beautiful. The volume is a book of rare excellence."—"Scotsmau."
"A book of reference humanised by excursions into vivid descriptions of actual hunts after birds, the Golden Plover, for example The coloured illustrations are beautiful.—"Evening Standard."

BRITISH BIRDS AND THEIR EGGS.

With a New Method of Indentification. 6/- net; per post, 6/5.

By J. MACLAIR BORASTON (Member of the British Ornithologists' Union.)

Contains 135 Coloured Illustrations.

The study of natural history, and especially of bird life, is now the healtby hobby and pastime of many amongst old and young alike. Mr. Boraston writes for the beginner, his aim being to give to those seeing birds for the first time the simplest means of identification. He considers that this object is best attained by describing the most obvious characteristics of the birds—viz., their broad distinctions of colour and markings, gestures and notes. The birds are therefore shown here as they present themselves to the eye of the beholder, and their scientific grouping is given in a list at the end.
"Mr. Boraston is a naturalist who can write and bring into his book something of the woodland magic of the heart-beats and true surprises of the bird lover."—"Saturday Review."
"Mr. Boraston has a grace of style not often given to naturalists."—"Times."

W. & R. CHAMBERS, Ltd., 38, Soho Square, London, W. and 339, High Street, Edinburgh.

GENT'S "Swift" cycle, £2 10s.; arch-top aviary, 4ft. x 2ft. x 5ft. high, straight mesh, 10/-; child's push carts, 7/6, 10/6; gent's shoes, 7's, as new, 7/6, or exchange large hen Canaries: Punter, 1, Grafton Parade, Horn-lane, Acton, London. (882)
NEW Lark net, 1¼in. mesh, 25 yards x 5 yards, 20/-; two show Linnets, toppers, kept back out of catch, with show cages, 4/6 each; three spring net traps, 2/6 each; pair new clap nets, 6 yards x 5 yards; everything complete for setting, 7/6; exchange anything in cycle line; wanted a good cycle, 26in. frame, 3-speed: Ashton, 3, Mafeking-st., Gateshead. (884)
TWO aviary moulted cock Bullfinches 6/6; three cock Chaffinches, 4/-, all full plumage; 2 pair boxing gloves, odd one, 4/-; 6-chamber revolver, plated and engraved, as new, 15/-; rook rifle, No. 3, accurate, good killer, 12/6; 6-air musical box, good order, 12/6; three fishing rods, one reel and line, 10/-; exchange mules, or offers: Jackson, Postman, Downham, Norfolk. (885)

SITUATIONS.

COUNTRY agents wanted for Trower's bird seeds and foods, good commission: Trower, 442, Caledonian-rd., London.

Aquarium.

TWELVE snails, plants, post paid 1s. 4d.; frog spawn, 6d.; miroir carp; livestock bought: 16, Mt. Vernon-rd., Liverpool. (882)

Ferrets.

SPLENDID Ferrets, worked all season, rats, rabbits, 6/6: Wannop, Short-st., Carlisle. (884)
SPLENDID lot of clean healthy Ferrets, guaranteed workers, 7/6 and 8/6 each: Naturalist, 21, Brook-st., Manchester. (884)

Garden.

SOLID steel hand plough and trench hoe, do more in an hour than a spade in a day, 1/11, carriage paid: W. Hill, 9, Poplar-rd., Sparkhill, Birmingham. Terms of business: satisfaction or money returned.

MUST CLEAR

1/6, 100 lovely Perennials, 1/6, carriage paid; 10 Pansies, 10 Marguerites, 10 Chrysanthemums, 10 Pinks, 10 Sweet Williams, 10 Hollyhocks, 10 Rocket, 10 Canterbury Bells, 10 Erysimum, 10 mixed Wallflowers; all to flower this summer; given gratis, 1 lovely climber: A. Stratton and Son, Plant Growers, 25, Wymington, Rushden, Northants.

Kennel—Dogs for Sale. Dogs for Exchange.

EXCHANGE, winning Fox Terrier, for yellow Norwich cock: Phillips, 29, Drysdale-st., Liverpool. (879)
MIDGE Yorkshire terrier, very small, 50/-; pedigree; exchange suits, or offers; particulars: 2, Strawberry-st., Hull. (886)
TOY Pom. bitch, in whelp, due April, 20/-; Pom. puppy, 10/-; exchange feeding hens: Holloway, 15, Ganna Park-rd., Plymouth. (882)
TWO game Bull-Airedale dog puppies, seven weeks, 7/6 each; bitch 6/-; parents tackle anything: Barton, Tobacconist, Greenwich. (885)
SALE, blue whippet bitch, 6 months old, from winning parents, 15/-; exchange fowl, offers: Bert Cole, 77, Butchers-lane, Cradley. (886)

SUFFERING WOMEN

To prove the superiority of Zedex, prepared in dainty, tasteless tablets) over all other remedies, I will send a

1 3 BOTTLE FREE.

together with interesting book full of information on Zedex, and explanatory treatise by Dr. Andrew Wilson. Send three stamps to cover carriage and packing. Obtainable from all Boots' Branches at 5/- per package. Advice Free.—MANAGERESS, ZEDEX CO., Hove, Sussex. Mention paper.

A POST CARD ONLY You cannot hold your own in life's battle if weak, worn, or easily jaded. Periodical attacks of moodiness, languor, despondency, depression, and groundless fears mean nerve troubles and lead to brain fag, impaired memory, and unfits one for study, business or pleasure. The chosen ones in every walk of life are the alert, the bright, and the intelligent, nature's natural gift, but marred for lack of a little knowledge. A post card to the Useful Knowledge Publishers, P.O. Box 94, Bradford, will put you in possession of a 48-page book, neatly bound, of valuable information, and will be sent post paid free of any charge whatsoever if you will mention CAGE BIRDS. A little knowledge saves much medicine. [Copyrigt.

BOOKS ARE STAR SHELLS

THAT LIGHT THE WAY TO SUCCESS.

Our Handbooks Help Novice and Expert Alike.

CANARY BREEDING FOR BEGINNERS. By CLAUDE ST. JOHN.—An exceptionally helpful, intensely practical and instructive handbook for beginners and tyros at Canary Breeding. It contains 116 pages 7in. by 5in., and is profusely illustrated and contains innumerable hints helpful to all young bird-keepers. In this book the reader is instructed how to pair up the stock birds, how to cage and feed them, how to test the eggs, what to do when the young birds are hatched, and so on until the birds are old enough to be put on the show bench. It is interesting from cover to cover, and is by far the best 6d. handbook on the subject ever published. Price 6d., post free 7d. Cloth bound, 1/2.

AVIARIES, BIRD-ROOMS AND CAGES: THEIR CONSTRUCTION AND FURNISHING.—A practical, up-to-date guide on this most interesting subject; written and illustrated by "Cage [illegible]-chief, Mr. H. NORMAN. It is fully illustrated with ten full-page photographic plates [illegible] sketches. Bound in cloth Gilt, price 2/-, post free 2/3; paper board covers 1/6,

[illegible]**IRD MANUAL.** By H. NORMAN.—Published in two parts—"Hardbills" and "Softbills." This latest and most up-to-date manual on British birds has been written and illustrated in colours, and black and white, by "Cage Birds" artist-in-chief, Mr. H. NORMAN. The author, who has made a life-study of the subject, gives in these volumes information and hints of the utmost value to all keepers of British birds. Part I., "Hardbills," deals with the Finches, their keeping, feeding, showing, etc.; and Part II., "Softbills," Blackbirds, Thrushes, Larks, Buntings, etc. Price 1/- per part, post free 1/1.

FOREIGN BIRDS FOR BEGINNERS. By WESLEY T. PAGE, F.Z.S., etc.—A most useful manual for all keepers of Foreign birds. It will be found indispensable information of an entirely practical nature—by a life-long specialist—on the keeping and feeding of the more common and popular varieties of foreigners. It contains illustrations in colour, and black and white, of some of the well-known species, and should be purchased without delay by all fanciers who go in for this most interesting branch of bird-keeping. Price 1/-, post free 1/1½d.

HOUSE'S CANARY MANUAL. By C. A. HOUSE.—5th Edition. A thoroughly practical guide to the general management and breeding of Canaries, dealing fully with the breeding, etc., of every member of the Canary family, including the Roller (or Singing Canary). An illustration of each bird, by the master Canary artist, Mr. H. Norman; exhaustive chapters on aviaries and cages, breeding procedure, moulting, exhibiting, diseases, and seeds—a compendium of knowledge. Price 1/-, post free 1/2. Cloth bound, 2/2.

THE SECRETS OF HYBRID BREEDING REVEALED AND EXPLAINED. By many notable Mule and Hybrid Breeders. Among the contributors are such well-known breeders as Messrs. R. Colton, W. H. Vale, C. Houlton, C. J. Ward, J. Beswick, G. Lander, T. H. Kinch, T. Smith, etc. This Handbook, which contains 212 pages, 7in. by 5in., is brimful of the most practical information on the highly interesting subject of Hybrid breeding. Being written by successful breeders, it is quite invaluable to everyone who would also be successful in his hobby. Price 1/-, post free 1/2.

THE STOCK BOOK, OUR INVALUABLE BREEDING ROOM REGISTER. Compiled by G. E. WESTON. The stock book which makes bird breeding easy. The book no breeder of birds can really afford to be without. Everything that a cage bird breeder needs to assist him in keeping his accounts is found in its pages. A large number of emergency hints are also given for the assistance of the fancier during the breeding season. Price 6d., post free 7d.

NORWICH CANARIES. By C. A. HOUSE.—The latest and most practical manual on this popular variety of Canaries. It tells the fancier all that he needs to know to enable him to become successful as a breeder and exhibitor of the Norwich Plainhead. The chapters on "Forming a Stud," and "How to Produce the Ideal," are worth the cost of the whole book many times over. Price 1/-, post free 1/1.

PET RABBITS, CAVIES AND MICE. By GEORGE GARDNER.—A complete and practical guide to the proper management of Rabbits, Cavies, and Mice. The information given in this handbook is thoroughly up-to-date, and deals with the housing, feeding, exhibiting, etc., of these popular pets. Many illustrations of champion rabbits, etc. Price 1/-, post free 1/1½d.

SEEDS, FOODS, AND WILD PLANTS FOR CAGE BIRDS. By various Leading Authorities. A comprehensive and complete manual on this most interesting subject. In it will be found information on the various seeds suitable for all varieties of cage birds, their food values, uses, etc. Descriptions and illustrations of the various wild plants that are indispensable to the successful keeping of all cage birds are fully given. Price 1/-, post free 1/2.

SEPTIC FEVER OR CANARY PLAGUE. By R. H. CLARKE, M.D., M.A.—A very useful booklet on this subject, which should be found in every bird lover's library. Dr. Clarke has given the subject of his book very special study. Price 6d., post free 7d.

Other Books obtainable from us—

BIRDS OF THE COUNTRYSIDE. By FRANK FINN, B.A., F.Z.S.—A handbook to the wild life of all our familiar British birds; their appearance and habits accurately described. With 12 beautiful coloured plates, and 118 photographic illustrations. A charming gift book. 5/4 post free.

PETS, AND HOW TO KEEP THEM. By FRANK FINN, B.A., F.Z.S.—Gives the correct method of housing, feeding, and managing every kind of pet; all sorts of animals are dealt with—monkeys, dogs, cats, lizards, tortoises; also gold and other fancy fish, while there is a large section devoted to birds. Contains many coloured plates and illustrations from photographs. Another charming gift book. 5/4 post free.

EGGS AND NESTS OF BRITISH BIRDS. By FRANK FINN, B.A., F.Z.S.—A most interesting Handbook for all lovers of British birds, containing coloured reproductions of 154 eggs from nature in 20 plates, and 74 eggs in half-tone and other illustrations. Price, 5/4 post free.

Advertisement Charges.

One Halfpenny for each word up to 48, 1d. per word afterwards. Name and address to be reckoned. Minimum, 12 words 6d.

IMPORTANT NOTE.—Two or more Advertisements coming from the same advertiser, even if sent in different names, are reckoned together, and are charged at two words a penny up to 48 words; after that 1d. per word. No single advertisement, even if accompanied by others, will be charged at less than the minimum price, viz., Sixpence.

Headlines or Footlines, 9d. 1/-, 1/6, 2/-, 2/6, according to size.

The rate for displayed advertisements is 7/6 per inch. Rates for a series on application.

ADVERTISEMENTS UNACCOMPANIED BY CORRECT REMITTANCE WILL NOT BE INSERTED.

Postal Orders must be sent as far as possible. All moneys should be made payable to F. CARL.

The Proprietor reserves the right to refuse any advertisement, or to cancel any advertisement ordered for a series, at any time, without assigning any reason for so doing.

Advertisements must in all cases bear the bona-fide name and address of the advertiser, and no advertisement will be inserted if addressed to a receiving office, or similar place of call.

Advertisements close Tuesdays first post in each week, and should be sent to the Advertisement Manager, CAGE BIRDS, 154, Fleet Street, London, E.C.4. Terms for Display Advertisements on application.

ALWAYS USE "CAGE BIRDS"

DEPOSIT SYSTEM.

We are not responsible for the statements made in advertisements, nor of the *bona-fides* of either buyers or sellers in all transactions the adoption of our Deposit System should be insisted upon

RULES.

1.—PROCEDURE.—The intending purchaser should send to this office the amount of the purchase (our deposit fee included), and at the same time he should communicate with the seller stating what it is he requires sent on approval. We acknowledge receipt of the deposit to both parties. In all cases the depositor should give his name and address, and also that of the vendor, and must write same clearly and distinctly.

2.—END OF TRANSACTION.—The deposit is retained by us until we hear from both parties that the transaction has been completed. If a sale has been effected, we hand the amount deposited to the seller. If a sale has not been effected, we return the amount to the depositor. The transaction must be conducted by the parties themselves. We merely hold the deposit.

3.—AMOUNT OF COMMISSION.—The fee is 6d. for each £1, or fraction of £1, and it must be sent at same time as the deposit.

4.—IMPORTANT POINTS.—The depositor must decide within forty-eight hours of the receipt of the goods whether he will keep or return the same, unless, that is, some other period of approval (of which we must be advised) is agreed upon by both parties. The depositor must at the same time notify us of the fact that he has returned the goods. If the goods are not returned within the said forty-eight hours, we reserve the right to send the deposit to the seller after the expiration of that period. And should the seller fail within three days to notify us of the receipt of his goods back again, the transaction will be treated as ended, and the deposit will be returned to the depositor.

5.—A SATISFACTORY PURCHASE.—When a transaction has been completed to the satisfaction of both depositor and seller, both parties must at once return the deposit receipts as a guarantee of its completion. The depositor must at the same time instruct us to pay over the deposit to the seller.

6.—GOODS ALREADY SOLD.—If the goods are sold before our deposit note reaches the seller, or if for any other reason he declines to do business, he must at once return the deposit note to us. Failing its receipt, we reserve the right to return the deposit to the sender after the expiration of three days.

7.—FRESH TRANSACTION.—In case no sale be effected, a deposit is available for purposes of a fresh transaction, provided another deposit fee be paid.

8.—GOODS IN TRANSIT.—Goods in transit are at the seller's risk, and any damage or loss sustained on the journey must be borne by the seller. But goods not approved of must be properly packed and returned by the same means as were used in sending the same.

9.—PAYMENT OF CARRIAGE.—The payment of carriage must be a matter for arrangement between the vendor and depositor. We do not undertake to settle disputes affecting questions of carriage. But in the absence of other arrangements the purchaser is liable for the carriage of the goods, and if the goods are sent on approval and returned, each party pays the carriage one way.

10.—DISPUTES.—In case of a dispute, the decision of the Editor is final.

IMPORTANT.

SEND THE FULL COMMISSION.—If the full commission does not accompany the deposit, the vendor will not be notified of its receipt until the amount deficient plus the extra postage incurred has been paid to us.

HOW TO REMIT.—Under no circumstances will Cheques or Post-dated Money Orders be accepted as deposits. Uncrossed Postal Orders must be sent and the numbers taken for safety.

Not Singing

If you have any birds you are relying upon for the breeding season that have gone into Soft Moult, we Guarantee you a perfect cure.

DITCHFIELD'S TONIC DROPS

are a certain cure for loss of voice, soft moult, slow moult, going light, feather plucking, and inflammation of the bowels.

DITCHFIELD'S FAMOUS REVIVO

is absolutely unequalled for giving new life and vigour to the birds, and for producing that smart tight appearance of the plumage so much desired by all fanciers.

These two Medicines, given on alternate days, will bring any bird into breeding condition.

DITCHFIELD'S SPECIAL LUNG TONIC

the grandest medicines ever introduced for chest and lung affections in cage birds. Can be given with absolute confidence to the most weak or delicate birds. All medicines can be given in the drinking water, and the birds take them freely, with marvellous results.

All the above remedies are sold in 8d., 1/2, and 2/2 bottles; two 8d. bottles for 1/2, two 1/2 bottles for 1/11, or three for 2/8. P.S.—The 1/2 bottles are treble the 8d. size. All orders sent per return, post free.

KNOWLEDGE IS POWER.

You can get it in 6d. Vols.

READERS of "Cage Birds" can to-day secure at pre-war prices volumes of the well-known **"Everybody's" Series.** Each volume is, on its particular subject, the handiest and best book obainable. Although small enough to fit one's pocket, each book is packed with a vast amount of valuable information. Consider the wonderful price—only **6d.** each (8d. post free), strongly bound in cloth; in attractive leather binding, 1s. each (1/2d. post free). The number of these books is very limited, and owing to the enormous increase in the cost of printing and paper, it will be impossible to reprint them at present prices. There are sure to be some of these books that YOU need—some that will give you just the information you have been seeking on some knotty point. Send in your order **NOW.** It is only necessary to state the *Number* of each book as given opposite the name in the list shown here.

1. Everybody's Guide to Poultry-keeping.
2. Everybody's Guide to Carpentry and the Doing-up of the House.
3. Everybody's Home Dressmaker. (7d. only.)

Champion YORKSHIRES & NORWICH

Bulldog Strain.

NOW IS THE TIME TO PROCURE YOUR BREEDING STOCK, to ensure getting **the best birds**, and to get them settled in their new home before pairing up. I have an enormous stock of all varieties on hand, and, having almost finished my export trade for this season, I can now concentrate my attention to the requirements of the home trade. My long experience as a breeder and exhibitor, and the large stock of birds I have to select from place me in a position to send you just such a bird or birds as you require. As regards the quality of my stock, it is surely sufficient to refer you to the reports of all the leading shows, from which you will find that both my **Yorkshires** and **Norwich** are not only maintaining but adding to, their great reputation. In addition to this, I have sold several birds that have won leading honours at all the principal shows. Kindly write, stating wants. I am now offering a limited number of grand stock and exhibition birds, either Yorkshires or Norwich, which I can guarantee as bred from my own **Bulldog Strain**, at 20/-, 25/-, 30/-, 40/-, 50/- each, cocks or hens. Also a few grand matched pairs at 40/-, 45/-, 50/-, 60/- per pair upwards. These are splendid value, and have only to be seen to be appreciated.

I have also a grand selection of stock birds from other well-known strains, as follows:—

YORKSHIRE COCKS, grand lengthy birds, in full song, 15/-, 17/6, 20/-, 25/-, 30/- each, upwards.
YORKSHIRE HENS, smart, racy, typical hens, 7/6, 10/-, 12/6, 15/-, 20/- each, upwards.
MATCHED PAIRS, 25/-, 30/-, 40/-, 50/-, 60/- per pair upwards.
NORWICH PLAINHEADS. Grand, thickset, cobby birds at same prices as Yorkshires.
BORDER FANCIES, Real good birds, both for stock and exhibition. **Cocks**, 15/, 20/-, 25/-, 30/- each. **Hens**, 7/6, 8/6, 10/- each. **Matched Pairs**, 17/6, 20/-, 25/-, 30/-, 40/- per pair.
CRESTS AND CREST-BREDS.—A few real good pairs at 30/-, 40/-, 50/-, 60/- per pair. Odd birds, Cocks or Hens at proportionate prices. **Matched Pairs for Mule or Hybrid Breeding**, 15/- pair.

ROLLERS. ROLLERS. ROLLERS.

I have a magnificent collection of pure British Rollers from the best and purest strains, at following prices:—

HIGHLY TRAINED COCKS, 25/-, 30/-, 40/- each.
PURE-BRED HENS, 7/6, 8/6, 10/- each.
MATCHED PAIRS, 25/-, 30/-, 35/-, 40/-, 50/- per pair.
Travelling Cages, 4d. extra in all cases.

One word more—**Please remember, I invite you** to come on any day but Sunday, and make your own selection, but if you cannot come, **Don't Forget** that I send every bird on 7 days' approval, at my sole risk. I personally select every bird that is sent away. I have over 4,000 (four thousand) birds in my rooms at the present time to select from, and I guarantee to give absolute satisfaction to every customer or return cash in full. Terms: Cash or deposit with Editor.

Send for 1917 Price List.

SIMPLY

A few more extracts of unsolicited Testimonials that go to prove that at all times the utmost satisfaction is given.

"MORE THAN PLEASED."

8th. Elmsall, Yorkshire. Mar. 21, 1917.—Received birds to-day. I am more than pleased with them. When I want any more I shall deal with you before anyone else.—N. C. Hall.

"BETTER VALUE IMPOSSIBLE."

33, Saville St., Cudworth.—Received birds. I am pleased with them.—H. A. Hirst.

Netherfield, Notts. Mar. 21.—Sir,—I am well satisfied with the bird you sent me. I should not have got a better bargain anywhere else, considering the price and the time of year.—P. Clements.

8th. Normanton. Mar. 23, 1917.—Bird arrived safe am highly satisfied. Best thanks for your straight forwardness and prompt delivery.—C. Ball.

"VERY SORRY."

Trehafod, nr. Pontypridd. Mar. 12.—Just a line thanking you for the grand specimen you sent me. I am very sorry I have not sent to you before, as I have spent a lot of money previously for Yorkshires, but have never got any a patch to this one from you. Thanking you for the straight way in which you have dealt with me.—E. J. Roberts.

Hundreds of others about same dates can be seen at any time.

IT IS NOT

the price you pay. You may go in for the very highest-priced birds you see offered, or you may go for the lowest. But the main point that every intending purchaser looking through these columns ask is the same, namely,

WHERE CAN I GET WHAT I REQUIRE? WHERE, TOO, CAN I GET THE BEST VALUE FOR MY MONEY?

These questions can be satisfactorily answered by stating your requirements, accompanied by a stamped envelope, or by sending your address for my

FREE ILLUSTRATED LIST,

before deciding upon your purchase. It will only cost you a postcard, so you cannot be much out of pocket. But, by **my value**, you can, if you choose, save much.

W. RUDD, SPECIALIST, NORWICH.

Members' Shows.

NOTE.—Secretaries will greatly facilitate the work of ourselves and our printers if they will kindly endeavour to send their reports as nearly as possible as they see these accounts printed, and if they will also write the names of exhibitors as distinctly as possible.

LONDON & COUNTIES A.C.B.

Annual British bird show, Mar. 17, Victoria Hotel, Charterhouse Street, E.C. The show was much better than last year, with 29 entries, good type and quality, and had a fair number of visitors. Judge, W. Shakespear. Goldf. (7): 1, Bell; 2, vhc, c, Hurst; 3, Gilbert. Bullf. (3): 1, Humphries; 2, 3, Gilbert. Linnet (3); 1, Stubb; 2, Gilbert; 3, Greenland. Siskin (2): 1, 2, Humphries. Bramble or Chaffinch (2): 1, 2, Humphries. Greenf. (5): 1, Humphries; 2, vhc, hc, Stubbs; 3, Gilbert. Bunting: 1, Humphries. Finch or Bunting Hen (5). 1, Bell; 2, Hurst; 3, vhc, Stubbs. Mules (1); Greenland.—W. Gilbert, Hon. Sec.

QUEEN'S PARK (Glasgow) C.B.S

Table show of British birds, Mar. 17, headquarters. A grand turn-out of 65 entries, and some fine specimens on the tables. Mr. Jamieson judged with satisfaction to all. GOLDF. (9): 1, sp, Connelly; 2, sp., and 3 and sp, McLellan; 4, M. Clymont; 5, Hyslop; 6, Lawson; 7, Knox. BULLF. (3): 1, 3, McClymont; 2, McLellan. GREENF. (7): 1, Knox; 2, 3, McClymont; 4, sp., Connelly; 5, Steel; 6, Brown; 7, McLellan. LINNET (10): 1, 4, McClymont; 2, Heggie; 3, Booth, 5, 6, Connelly 7, Jeffrey. SISKIN, ETC. (4): 1, 2, Connelly; 3, McLellan; 4, Wilson. LESSER REDPOLL (5): 1, 3, Steel; 2, McClymont; 4, Connelly; 5, McLellan. HENS FOR HYBRID BREEDING (8): 1, Steel; 2, sp, 3, McClymont; 4, McLellan; 5, Wilson; 6, Lawson; 7, Knox. LIGHT MULE OR HYB. (3): 1, sp, 2, 3, Heggie DARK (7): 1, 2, Heggie; 3, sp, Steel; 4, Jeffrey; 5, Booth; 6, Clarkson; 7, Knox. A.O.V. (9): 1, sp, Hyslop; 2, 4, 6, Connelly; 3, sp, Booth; 5, 7, Brown.

BIRKENHEAD CANARY F.A.

Night show of British birds and monthly meeting, Abletts Cafe, March 21. The birds were not so numerous as in former years, but what they lacked in quantity was made up in quality. Mr. J. Burns judged and his awards were well received. Goldf.: 1, Caine; 2, Byrne, fine house moulted Finches, staged in excellent condition; 3, Morton; 4, Greatrex, useful Greypates. Linnet; 1, Price; 2, Greatrex; 3, 4, Morton, all field moulted, the winner a bird of high merit, and very steady. A.O.V.: 1, Wilson, grand 4-pointed Goldf.Canary; 2, 3, Greatrex; 4, Morton. The judge gave a most interesting and instructive lecture on the show points and general management of British birds, and many questions were asked and answered. Several new members were made, and first feather show dates fixed for the last Saturdays in June and July. A vote of thanks to the judge, who was the founder of the society 15 years ago, ended a most enjoyable evening.—G. Morton, sec.

Club Reports.

LONDON C.B.A.

Meeting Mar. 15, "Red Lion," 2, York Street, St. James' Chairman, Mr. Robson, and a good attendance. Two new members nominated, and after general business an interesting discussion took place on "What constitutes a tick?" which proved very instructive.—A. Wallington.

LONDON AND COUNTIES A.C.B.

On Monday, Mar. 26, well over a hundred members and friends braved the elements to join in the first social and musical evening of the association, and reaped a just reward. In spite of the execrable weather prevailing, quite the majority present were ladies, and one of the most pleasant evenings ever enjoyed by bird lovers was spent. Mr. J. Robson was in the chair and was supported on his right by Mrs. Robson, and on his left by the representative of CAGE BIRDS. The programme consisted of twenty-five items, and the encores made more of it, but all were got through to the evident enjoyment of artistes and audience alike. Miss K Davis presided at the piano, and among the many who gave their services were Mrs. Pinn, the hostess, with three popular songs which were finely given and enthusiastically received; Mrs. Jackson, with two stirring recitations; Miss Davis, who sang the ever-popular "Good-bye" (Tosti), and "England, our England," both of which were encored; Master Pinn, a chip of the old block, evidently; the worthy hon. sec., Mr. W. Gilbert; and Messrs. Westbury, Durham, and Langford. Mr. Robson proposed the toast of "The Society," and pointed out how the association had progressed from a small beginning until it had become a strong society, and Mr. Gilbert modestly responded. The other toasts were "The Visitors," responded to by Mr. Fulljames on behalf of the ladies, and Mrs. Pinn for the gentlemen, "The host and hostess," and "The King." All joined in singing the National Anthem, and a memorable evening came to an end. During the evening light refreshments in the way of sandwiches of all kinds and tasty sweets were handed round, and the manner in which these were served reflected great credit on the management of the host and hostess. Mr. and Mrs. Pinn.

"Food."

THE GREAT NEW NATIONAL WEEKLY.

A practical journal which shows how to grow our own food.

The profitable rearing of Poultry and animals which help to fill our food bill is dealt with each week, and invaluable advice is given to those who have started to produce home-grown fruit and vegetables.

No one with a garden, large or small, should be without this wonderful penny-worth, and the small holder will find in it a veritable treasury of practical knowledge.

Every Thursday 1d.

Advertisement forms and specimen copy sent post free on application to "Food" Offices.

154, Fleet St, London, E.C., 4

CRYSTAL PALACE AND PENGE.

Meeting, Mar. 14, Alexandra Hotel, Penge, Mr. Foxen, chairman. Balance sheet of pair show passed, showing balance of 7/3. Two new members elected, and other business discussed. Chairman asked Mr. Martin, of Battersea, to kindly give his lecture on "Basis of a strain," which was greatly appreciated, and caused a number of questions to be asked, which the lecturer was well able to answer. A vote of thanks was passed, and the lecturer thanked the members for their kind attention.—W. D. Fryett, Hon. Sec.

WALTON AND EVERTON C.B.S.

Meeting, Mission Room, Kilshaw Street, March 14, Mr. T. Rowlands chair. New members nominated: Mr. G. Thistlewaite and Mr. Howard. A cup and two medals were promised for most points novice Canaries throughout the season. A night show was afterwards held, some very good birds being staged, especially in the Mule class. Class 1: 1, 2, Satterwaithe; 3, Jordon; vhc, hc, Hayes. Class 2: 1, Jordon; 2, vhc, hc, Satterwaithe; 3, Hayes; c, Jordon. Class 3: 1, Satterwaithe; 2, Hayes; 3, Jordon. Class 4: 1, Jordon; 2, Hayes. Mule or Hyb.: 1, vhc, hc, c, Lloyd; 2, 3, Satterwaithe. Brit.: 1, 2, 3, hc, Satterwaithe; vhc, Lloyd. A vote of thanks was accorded to Messrs. Holden and Wilkins for judging. Points for British section: Satterwaithe 25, Lloyd 11.—J. Lloyd, Hon. Sec.

GREENOCK, PORT GLASGOW, & GOUROCK O.S.

Annual general meeting, March 14, Shepherd's Hall, Mr. D. Molloy presided over a good attendance. New members admitted: Messrs. D. MacLennan, C. Brooks, R. Maitland, J. McKinnon, J. McDougall. Balance sheet read and adopted. Office-bearers for 1917 elected:—Hon. Pres., Thos. Watson, Jas. Smith; pres., D. Molloy; vice-pres., D. Brown, min. sec., G. Wylie; sec. and treas., J. Mc G. Dooley; auditors, T. Watson, A. Craig; committee, Messrs. McDermid, Brown, Roddin, Mount, McCartney, Urquhart, Fleming, Best, Martin, McCathy, McAleese, Galbreath; visiting committee, for Canaries, Wylie, Mount, Dooley, Roddin; British, McDermid, Martin, Molloy, Urquhart. A vote of thanks to the retiring treasurer brought the meeting to a close.—J. Mc G. Dooley, Sec.

AYRSHIRE (Scotch Fancy) C.C.

Meeting, Brodie's Hall, Kilmarnock, Mar. 24, Bailie Robertson presiding. It was pointed out that subs. were due, and the following members paid: Bailie Robertson, Messrs. Campbell, Hainey, McLean, Smith, Lees, Ralston, Burgess, and Rodger and Ferguson. The date of show has been fixed for Nov. 24, the system of working to be the same as before. Judges nominated: Messrs. J. A. Stewart (Sen.) and A. Livingstone. Owing to the increased cost of travelling it was not thought advisable to call another meeting until about a month before the show. With a view to giving all Scotch Fancy men in Ayrshire a chance of letting their specimens be seen to advantage, it was suggested that fanciers in Ayrshire who wished to join, and who would be thereby enabled to show eight young birds at no cost for entry, might communicate with the sec., Hugh M. Ferguson, 37, Whitletts Road, Ayr.

AYR C.B.C.

Meeting, Wallace Tower Hall, High Street, March 23, Mr. P. McQuiston presiding. The new hon. pres., Mr. P. Paterson, was present, and his keenly interested participation in the discussions gave much pleasure and encouragement to the members. The vice-president, Mr. Douglas Wason, sent a letter of resignation, and the sec. was asked to write him requesting him to reconsider his decision. Arrangements for F.F. Show, June 30, were discussed. Canaries, etc., to be judged by Mr. Smillie, British, etc., Mr. McQuiston, who will not compete, but may send a good number of specimens to increase the display. Classification: Norwich 2; Yorks. 2; Scotch Fancy, 2; Bord., 2; Norwich 2; Yorks. 2; Scotch Fancy, 2; Bord., 2; Young Mule or Hybrid; Goldf.; Bullf.; H.M. Linnet; F.M.; Mealy Redpoll; Twite or Siskin; Lesser Redpoll; Hen, British; Old Mule or Hyb.; Common Canary; 3d. per bird entry fee. Mr. Paterson, hon. president, intimated that he would present a prize of 10s. for most points with young birds, the secretary giving 5s. as second prize. Mr. McQuiston gives a first prize of 3s and a second prize of 2s. for most points in Mules or Hybrids and British, and Mr. Robert C. Gribben a prize of 3s for most points over the show. Mr. Charles Kermack was elected a member. A vote of thanks was accorded to the hon. president for his presence, and generous support.—H. M. Ferguson, sec.

SOUTHERN NORWICH P.C.

THE TICKED OR MARKED QUESTION TAKEN IN HAND.

The annual meeting was held at the Reindeer Hotel, Rye Lane, Peckham, Mar. 15, Mr. J. Hazel, chair. Sec. presented his report, and in the unavoidable absence of the treasurer the accounts for the past year. A copy of the balance sheet having been sent to all members, the same was passed. Sec. pointed out that the subs., etc., for the year had exceeded those of 1914 by 26s., and that patronage had been given to five shows, but in only three cases had the diploma, etc., been awarded. At Clapham show the special had been won by Mr. Houghton, and the diploma by Mr. Rippon. At Cheltenham Mr. Houghton won both special and diploma, and at Dulwich and Peckham Mr. Spillman also secured both.

Result of election of officers by voting papers.—President, Mr. E. Baker; vice-presidents, Messrs. G. Crabb, J. Hodder, W. R. Miles, J. W. Ramsden, G. W. Saunders, and W. Spillman; auditors, Messrs. T. Heath and J. Robson; committee, London: Messrs. R. J. Burt, F. Cole, G. F. Crawford, G. A. Harris, J. Hazel, W. Hodson, and F. J. Martin; provincial: Messrs. W. Collins, S. Gill, J. Houghton, W. N. Midgley, A. E. Morris, and E. J. Rippon.

The secretary read a letter from Mr. W. Pavey drawing attention to a recent disqualification of a Norwich Canary, and after considerable discussion it was decided to recommend the following definitions as meanings for the words "clear," "ticked," "marked," and "variegated," so that the same might be fully considered by all members before the next meeting:—A bird is "clear" when it has no visible or surface marking, darkness of underflue, beak, or legs not to disqualify.

A bird is "ticked" when it has a small visible or surface mark, or series of marks, or grizzle, on an otherwise clear body, the extent of which marking can be covered by a three-penny piece. A bird is "marked" when such mark or series of marks cannot be so covered. A bird is "variegated" when it is "ticked" or "marked" in two or more places.

Mr. Crawford drew attention to the fact that the society did not hold a specialist club show, and was of opinion that the same should be seriously considered, and an extended classification given thereat. The meeting closed with a vote of thanks to the officers for the past year and to the chair.—F. Cole, Hon. Sec.

JARROW, HEBBURN C.B.S.

Meeting, Victoria Hotel, March 21st, Mr. Hutler chair. Messrs. F. Griffen, J. Foreman, W. Hostbam were elected members. Mr. Hutler, our old and respected late treasurer, was elected chairman. Mr. Ayers was re-elected as sec., and the office of treasurer was left open for a further date. Owing to so many members working on urgent war service we were not able to pick a committee, but hope to do so at next meeting. We have a splendid challenge cup to be competed for annually, and a hearty invitation is given to all fanciers to join us.—W. Ayres, sec.

SHEFFIELD O.S.

Meeting headquarters, Mar. 20, Mr. Dawn presiding over one of the largest attendances for some time. Mr. J. Robson gave a lecture on general management and pairing, a most appropriate subject. The lecturer pointed out many little details the neglect of which meant failure and disappointment, and eventually a breeder lost to the fancy. His remarks on pairing were very instructive, and were listened to very earnestly. At the conclusion numerous questions were asked. A vote of thanks was accorded to Mr. Robson, who, in replying, said how pleased he was to come to Sheffield, and if his remarks had removed any misconceptions or suggested some important truths in connection with the subject treated he was amply repaid.—E. C. Job, Sec.

CRESTED CANARY CLUB.

The general meeting was held March 2, at 2, York Street, Piccadilly; Mr. G. Crabb, chairman. A resolution was passed that all members be asked to pay their subscriptions for 1917, also that we give our support to four shows during the coming season, with the same specials and conditions as last season, but the competition for the two ten-guinea books be withheld until the termination of the war. The balance sheet as audited was presented and duly passed, showing a cash balance in hand of £8 15s. 7d. The hon. sec. reported that they had only two applications for club's support last season, viz., Cheltenham and Sheffield. Although these two shows were held on following days, both shows had very good entries and one of the best shows of Crests and Crested-bred birds ever held in the North, both as regards quality and number of entries was held at Sheffield, showing that shows reaped a great advantage when they obtained the club's support. All members should obtain their closed rings direct from the hon. sec., giving him 14 days' notice. A vote of thanks to the chairman closed the meeting.—T. Heath, Hon. Sec., 28, Kenilworth-court, Putney, S.W. 15.

CARDIFF C.B.S.

Annual general meeting; Rev. C. B. Jolliffe presided, and the meeting was well attended. Officers for the ensuing year elected, President, Mr. C. Williams, chair Mr. E. J. Banks, vice-chair, Rev C. B. Jolliffe, treas, Mr. A. Ball, sec., Mr. E. T. Romas, committee, Messrs. H. C. Smith, E. James, W. J. Phelps, J. Pearce, A. Shellam, E. J. Davies, P. Braill, E. W. Allsopp, F. Moward, M. Pugh, M. Wilson; the auditors, Rev. C. B. Jolliffe and Mr. H. C. Smith, presented the report and congratulated the society on the result of the open show, which showed a balance to the good of £12 6s. 9d. Resolved that this be handed to the Prisoners of War Fund. The general fund was also good, and we have a balance in hand of £21 5s. 10d. and cups to the value of £35. Resolved to purchase a cup for the Mule section, the cost to be provided by voluntary subscription. £2 was promised at the meeting. Resolved to hold Young Bird shows June 20 and July 25, and that committee deal with the date for the open show. Rev. C. B. Jolliffe promised to give his idea on how co-operation could be worked at a special meeting on April 3, members please note. Mr. H. C. Smith will read a paper on seeds at our next monthly meeting. Mr. Lewis, Porth, was elected a member.—E. Thomas, Sec.

PLYMOUTH W. COUNTIES O.S.

Meeting and club show Mar. 20, Oddfellows' Hall, Morley Street; The birds staged far exceeded anything yet seen in the hall, the number of birds being 60; Messrs. W. Spillman, sen., and G. Pridham judged. Deep regret was felt that the hon. sec., Mr. W. A. Dyer, was compelled to tender his resignation, business having called him away from the locality; members expressed their best thanks to him for past services, trusting that he will at an early date be amongst them again. The hon. asst. sec., Mr. O. Moffitt, was elected to fill the vacancy pro tem. Special prizes were awarded Messrs Cheney, J. Wills, Hambley, Olver, and Bennett. Other awards were: Goldf. and Bullf. H.M., 1, 3, Cheney; 2, Hambley; 4, Mitch; 5, 7, Craven; 6, Deeble. F.M.: 1, Cheney; 2, 3, Condy 4, Rapson; 5, 6, Garland. Linnet, H.M.: 1, J. Wills; 2, Hambley; 3, F. Wills; 4, Olver; 5, 7, Cheney; 6, Perrin. F.M.: 1, 2, and 4, Deeble; 3, Hambley. Siskin, etc.: 1, Cheney; 2, Condy. Greenf.: 1, Olver; 2, Cheney; 3, J. Wills. A.O. Hardbill: 1, Bennett; 2, Cheney; 3, Wills; 4, Rapson; 5, Olver; 6, Walter Spillman. Hardbill, H.M.: 1, 3, Perrin; 2, Spillman; 4, F. Wills; 5, Cheney; 6, Hambley. Light Mule: 1, Hambley; 2, 3, and 4, Perrin; 5, Cheney. Dark: 1, Hambley; 2, Cheney; 3, F. Wills.—O. Moffit, Hon. Sec.

CITY OF BIRMINGHAM C.B.S.

Meeting Feb. 7, Mr. Broadhurst chair. Officers for 1917 elected: President, Mr. G. A. Smith; vice-presidents, Messrs. J. A. Eckersley, W. W. Butler, J. Webb, A. J. Smith, H. C. Wilkins, E. Fordred, A. Broadhurst, J. H. de Maillett, W. C. Wells, F. Dipple, P. T. Cowley, and H. T. Collier; chair, A. Broadhurst; vice-chairman, W. C. Wells; treasurers, Messrs. H. T. Collier and J. H. Allen; auditors, Messrs. S. N. Taylor and A. Ward; sec., A. C. Shirley; committee, Messrs. J. Bastock, J. Burke, F. Derry, J. Fessey, T. Jones, G. Raby, and W. Sheldon; also meeting Mar. 7, Mr. Broadhurst chair, a poor gathering. Decided to hold annual open show in Dec., and to ask Messrs. J. H. Roe, R. Norman, and J. Robson to adjudicate. Mr. J. H. de Mailett read the show balance sheet, which was very satisfactory, showing a profit of £1 6s., and was decided to grant him a further sum of £1 10s., making £3 in all as an acknowledgment for valuable services rendered. The general balance sheet was read, which showed a balance of £15 in hand. Subject to audit, this being £6 in excess of last year. Decided to post a printed copy to each member. Next meeting night, Saturday, April 7, at 7.30. Mr. Weaver, Wolverhampton, will give us a seasonable lecture. It has been decided to hold this on a Saturday, so as to get a good gathering, and not disappoint the lecturer. Should this prove a better night for our meetings it is possible the night will be altered to Saturday. New members are wanted. Will members do their best to introduce them. A cordial invitation to non-members to attend to hear Mr. Weaver's lecture.—A. C. Shirley.

HASLINGDEN R.C.C.

A most enjoyable afternoon was spent by members and friends on Mar. 24, when a lecture on the Roller Canary was given by Mr. Kilshaw, Bolton. The meeting closed with a vote of thanks to Mr. Kilshaw for the able manner in which the lecture was given. Friends came from Nelson and Great Horwood to listen to him.—H. Nuttall, hon. sec.

ACCRINGTON C.B.

Social evening, Mar. 21, at Crown Hotel, Mr. D. Harwood, chair. About 40 members and friends attended. Mr. F. Galloway entertained the company on the piano. Messrs. Ashton, Hargreaves, Riley, G. (Singleton, and A. Noble contributed highly appreciated songs and music. Our esteemed President, Councillor J. Smith, in presenting the cups to the winners, said it gave him great pleasure to think how they had progressed in the fancy. Seven new members were enrolled. An invitation was given to all to our next meeting, April 4, when a lecture will be given by Mr. A. Hirst on the general management of birds when breeding. A vote of thanks to President and artists brought an enjoyable evening to a close.—Wm. Parkinson, sec.

In the Courts.

BIRD DEALERS AT LAW.

A Costly Letter to a Newspaper.

At the Leeds Assizes March 13, F. Allen, bird fancier, Porter-street, Hull, sued John Day, carrying on similar business in the same street, for damages for libel. Mr. R. A. Shepherd, instructed by Mr B. Pearkman, appeared for the plaintiff, and Mr. H S. Cautley, M.P., instructed by Messrs. Laverack Son, and Wray, for the defence.

Mr. Shepherd, said the plaintiff had carried on business for some years at his present address, and about three years ago the defendant began a similar business. The suggestion counsel put forward was that the defendant had attempted to ruin the plaintiff's business, but, whatever his motives, Mr. Day had not the courage of his convictions.

He wrote a letter, to which he did not attach his name, to the editor of a Hull newspaper, which began:—

"Being out in the country the other day, I came across two able-bodied men belonging to Hull, bird-catching, and walking up Market last Saturday saw one of the men selling these birds, linnets, at 1s. and 1s. 6d. each. Now, it is against the law to catch these poor little birds at this time of the year, as they are only in their nest feathers yet. It should not be allowed."

The letter went on to suggest that the men would be better in khaki, and continued:—

"One of the men keeps a bird shop. The other works when he likes, and they do it in good style with a motor and side-car. This should interest Major Boyd."

Major Boyd was the Hull recruiting officer. The letter, Mr. Shepherd remarked, made two charges, one of catching wild birds during prohibited times, and the other that the man concerned was shirking his duties as a patriotic citizen.

The letter appeared in the paper on August 30, and almost by the same post Major Boyd received a letter calling attention to the correspondence in the paper, adding:—

"Why is this state of things allowed to go on—two young men bird-catchers in war-time, when men are badly needed? They have got exemption by telling a pack of lies."

Cross-examined by Mr. Cautley, the plaintiff admitted that he styled himself "the British Bird Champion," and that he judged at singing contests.

You also describe yourself as "the British Linnet Expert"?—Yes.

And as "Fred Allen, B.B.C., Linnet Specialist"? Yes: I have beaten all the world as far as I know.

Are you aware that in the East Riding it is illegal to catch birds?—I don't know. I never have occasion to go out.

You come of a bird-catching family? Your father was a bird-catcher before you.—No, sir; my father was a humourist—(laughter).

A verdict was given for plaintiff, who was awarded £5, with costs on the High Court scale.

A Plate of Eggs.

With the "Boy's Own Paper" for March is presented a coloured plate reproduced from a painting by Mr. Geo. Soper, of British Birds' Eggs. A companion plate to complete the series will be given with the May issue. The picture is very nicely printed, and as a whole is a useful presentation of the coloration of the eggs of some of our British birds. It is open to criticism in some details however. The egg of the Song Thrush, for instance, is not of the same blue in the picture as in reality, and that of the Blackbird is shown as being of a brownish hue instead of the greenish blue of the egg in nature. The Cuckoo's egg again is so heavily marked with brown as to present a brownish appearance all over, and nothing is said in the text referring to the picture of the great variation in the coloration of the eggs of the species. We doubt if any individual Cuckoo's egg was ever so brown as the one depicted. These are but minor defects, however, in a very nice plate.

"PIGEONS"

The only paper dealing solely with Show, Tabl and High-flying Pigeons.

Coloured Plates a Special Feature.

Every Friday 2d. Send P.C. for specimen.

"FUR & FEATHER"

The Rabbit, Cat and Cavy Paper.

The only Paper devoted to these subjects.

Every Friday 1d. Send Postcard for Specimen.

Offices: Idle, Bradford, Yorks

SHOW DATES FIXED.

To secure insertion in this column, a guarantee that the show will be advertised in "C.B." to the extent of at least 30/- must be sent to our manager.

England.

Nov. 1.—Blaenavon C.B.S.—(Geo. Broome, 82, King St.)

Nov. 3-5.—Leicester Hand-in-Hand C.B.S.—(Day and Roberts, 28, Francis St.)

Nov. 14.—Coventry O.S.—(J. Kent. 91, Villiers St., Stoke, Coventry.)

Dec. 7-8.—Barrow C.B.A.—W. H. Johnson, 52, Park Avenue, Barrow-in-Furness.) J.R., H.W.B., T.B., J.M.

Wales.

Nov. 15.—Swansea C.B.A.—(J. H. Ford, 83, Norfolk St.) D.J., S.J.N.

CAGE BIRDS, 154, FLEET STREET, LONDON.

Cage Birds
and Bird World.

A Guaranteed Circulation amongst 50,000 readers weekly

Offices: 154, Fleet Street, *London, E.C.4.*
Telegrams—"Aviculture, Fleet, London."
Tel. No. 5229 Holborn.

The Editor *is always glad to receive and consider* **suitable contributions,** *whether articles, sketches, or photographs. Provided an addressed envelope, sufficiently stamped, accompanies same, every effort will be made to return unaccepted contributions promptly, but he does not in any case hold himself responsible for their safety.*

All matter *intended for publication must be written or typed on* **one side** *of paper only, and must reach us not later than the first post on Tuesday if insertion in the next issue is desired.*

"CAGE BIRDS" will be sent post free weekly, on the day of publication, at the prepaid rate of 10s. per annum for the United Kingdom, and 13s. annually for foreign countries.

Twitterings.

Mr. J. G. Taylor writes that he has removed from Old Fallow, Cannock, to 206, Watling Street, Bridgtown, nr. Cannock.

The first annual open show of the Maesteg C.B.S. will be held on Nov. 21, writes Mr. C. Williams, hon. sec. Other Welsh Societies please note, so as to avoid clashing.

The Barrow C.B.S., writes Mr. Thos. A. Croft, hon. sec., have arranged to hold its nest feather show on July 7th. Nominations close definitely April 7. Messrs. Wellings and Mulliner will judge.

The annual show of the Barrow-in-Furness C.B.A. has been fixed for Dec. 7, 8. The judges are Messrs. J. Robson, Borders and Scotch Fancies; H. W. Battye, Yorkshires; T. Beswick, Norwich; and J. Maddison the remainder.

If Mr. G. E. Minoprio, 28, Alexandra Drive, Prince's Park, will send full address, writes Mr. J. Hicks, Holsworthy, the parcel of wild seed will be delivered. It is now, and has been for some weeks, lying at one of the L.&S.W.R. offices in London, and the Company are unable to trace Prince's Park in London.

Those interested in the keeping of British birds should attend the meeting of the Clapham C.B.A. on April 3, at the "Clock House," Clapham Park Road, when Mr. A. R. Coe is to open, at 8 o'clock, a disoussion on "Buntings." Some useful information should be gained from the remarks of the many members of the Clapham C.B.A. who are keepers of British birds.

Owing to the vast amount of work we have at present on hand, and the scarcity of labour, writes Mr. E. M. Stanton, Patricroft, I am compelled to state that we cannot guarantee despatch of any future orders before the end of April. Much credit for the success I have achieved is due to Cage Birds. It brings orders from far and near, and I have much pleasure in wishing the success it rightly deserves.

On the Way to a Settlement.

As will be seen by the report in another column of the annual meeting of the Southern Norwich Canary Club definitions were suggested which are designed to obviate the repetition of misunderstanding between exhibitors and judges as to whether birds are "marked," "ticked," or "variegated." If the suggestions be carried out as made, there will not be in Norwich Canaries an evenly marked bird, for if there be more than one mark or tick on the plumage, no matter what the size of the marks, or ticks, it would be styled a variegated, even or uneven as may be. A mark will simply mean a group of dark feathers larger than a threepenny piece; smaller than this will be a tick.

A Word to the Wise.

The question of the paper supply is getting more and more acute, and the restrictions laid upon consumers such as newspaper proprietors and publishers are becoming more and more severe. In the circumstances we ask our readers to give us their kindly help by placing their orders with their newsagent for the regular weekly supply of Cage Birds. In the immediate future it will probably be out of our power to send from our publishing offices more copies than are actually on order, and we are giving the hint as above entirely in the interests of our readers.

An Address Wanted.

Mr. C. J. Martin, hon. sec. of the Hornsey Wood Green C.B.S., would be glad if Mr. Watts would send his address, as there is no record of his membership in the club's book of members.

One of the Old School Comes to Town.

During the week we had the pleasure of a call from our old friend Mr. Howard, of Norwich, "Jimmy," of that ilk, and we were glad to note that he has not lost any of the vivacity so well known to fanciers of the old school, who, alas, are getting fewer and fewer, When the shows come round again as of yore the gatherings will be the poorer for the loss of some of the old familiar faces, but it is pleasant to know that there are still amongst us those who are looking forward to many a "crack" to keep up the memory of days that are past.

An Invitation to Newcastle Fanciers

Newcastle C.B.S., writes Mr. T. C. Crawhall, chairman, are to have a lecture upon breeding and rearing by Mr. Johnstone, of Wallsend, on Thursday, April 5th, at Shield's Cafe, Bigg Market, and extend an invitation to all fanciers whether members or not. I suppose Mr. Johnstone rears more Canaries than any other fancier in the North-East, and those who have not been successful in the past should not fail to hear him give his methods. We want an early start, so that we may finish early, so those who wish to hear him should come in good time; see secretary's announcement.

HOLIDAY NOTICE.

Owing to the Easter Holidays, the Editorial Offices of Cage Birds will be closed from Thursday evening, April 5th, to Tuesday morning, April 10th. Correspondents will greatly oblige by posting their communications to reach us on Thursday, and queries to which an answer is desired in the following issue must be in hand not later than Thursday afternoon. Next week's issue will be published one day earlier than usual, and will be on sale on Thursday morning, April 5th.

Seasonable Hints on Useful Weeds.

By RICHARD MORSE, F.R.H.S.

Groundsel.

A Widely Distributed and Valuable Food for Birds.

THE natural distribution of our wild plants is an ever-present problem for the botanist. Certain plants, apparently quite hardy, are to be found in only one or two districts in Great Britain. They have been established there for generations, and surrounding conditions are often eminently favourable to their rapid spreading, and yet they seem never to venture beyond their limited habitat, even though assisted by man to do so.

GROUNDSEL IN FLOWER.

Other plants there are which spring up abundantly in every conceivable place, high and low, rich and poor, damp and dry, all seem equally well to suit their purpose, and they flourish and spread where closely related species would rapidly wither and die. Fortunately for the bird-keeper the common groundsel (Senecio vulgaris L.) is one of these ubiquitous plants, and only the most carefully tended fields and gardens can claim to be free from its invasions.

As one would naturally expect from such a plant, it is of a most variable character, according to the conditions under which it grows. On dry banks and walls tiny flowering specimens scarcely more than two inches in height may often be seen, whilst on well manured ground it sometimes reaches fifteen or more inches, becoming also much branched, as well as robust and succulent, and almost unrecognisable as the same species. The hairiness of the plant, too, varies very considerably, it being sometimes decidedly cottony, and in other cases totally devoid of any trace of even the tiniest of hairs.

The general appearance of a spray of groundsel is shown in the accompanying sketch, with one expanded seedhead at the summit. This latter closely resembles the well-known globular head of the dandelion, but is of course very much smaller. The tiny flower heads never seem to the inexperienced to open to their fullest extent, but on close examination it will be found that this is not the case, for there are none of the familiar petals which we so often associate with flowers of this kind, but only a number of florets similar to that shown with an enlarged leaf in the other drawing.

Groundsel is for the bird-keeper undoubtedly one of the most valuable of all our wild plants, and withal one of the safest in use. With regard to its collection, it is generally preferable to go some distance from the roadway, for the cottony substance which often covers the plant seems to gather a vast amount of dust and dirt of all kinds, which of course make it far less palatable as a food. If gathered in clean and healthy condition, it can always be given with perfect safety, and the young tender shoots which are now becoming plentiful in fields and allotments will even delight the Goldfinches, in spite of their usual indifference to green foods in general.

In connection with all medicinal herbs, it has long been known that the time at which

LEAF AND FLORET OF GROUNDSEL.

a plant is gathered as well as the health and vigour of the specimens concerned are most important factors to be taken into consideration. Rank and overgrown plants are best avoided, as they usually contain too great a proportion of water or connective tissue, and seldom produce anything like the quantity of seed to be found on more normal specimens. Groundsel becomes unnaturally stimulated on very rich soils, and then tends to run to leaf and stem at the expense of its flowers and fruits.

Country folk have for long ages had great faith in the medicinal virtues of groundsel, and this herb has been claimed for generations to be an invaluable remedy for various internal disorders, particularly those arising from disordered liver and kidneys, and also as a most excellent spring tonic and purifer of the blood.

Readers are invited to send any botanical specimens which they have difficulty in identifying. The whole plant, including fruits, should be sent whenever possible. Packages should be addressed "The Editor, Cage Birds, 154, Fleet Street, London, E.C. 4, and must be accompanied by a P.O. for sixpence. Answers will appear in this column.

The Crested Canary Club General Meeting.

At the general meeting of the Crested Canary Club (see under Club Reports), it was resolved to give the patronage of the club to four shows during the coming season, but to hold over the two 10 guinea bowls until after the war.

OBITUARY.

MR. G. LAWRANCE, COVENTRY.

I deeply regret to announce the death of Mr. G. Lawrance, Coventry, who was one of the oldest fanciers in the district, writes Mr. J. Kent, hon. sec. Coventry O.S. He was a good fancier, and a man of great experience in bird keeping. I am sure that all who knew him will join in offering deep sympathy to his family in their sad bereavement.

Mr. M. WOODHOUSE (South Shields).

I regret, writes Mr. W. F. Smith, hon. sec. Leeds C.B.S., to have to announce the death of one of the old school, Mat. Woodhouse. He was showing birds 40 years ago. Always of a quiet disposition, and a visitor to all the principal shows, he could hold his own wherever he went. He was always very keen on anything uncommon and likely to create attraction. He had his hands full during the last few years, and his wife, who had been an invalid for 11 years, passed away a few months ago. Our friend followed her, about 3 weeks ago. "Old Mat." will be sorely missed by many.

EASTER HOLIDAYS.

In consequence of the Easter Holidays next week's issue of CAGE BIRDS will be published ONE DAY EARLIER, and be on sale THURSDAY MORNING, April 5th.

☞ Correspondents will oblige by getting us have their communications by Monday, April 2nd. In any case all copy must reach us by Tuesday (April 3rd) first post at latest.

ADVERTISERS

Remember to send your advertisements NEXT WEEK to reach us TUESDAY FIRST POST CERTAIN. Post early, in view of possible delay in post.

FURTHER; Kindly send along your advertisements for the *following week's issue* (date April 14th) at the same time.

BIRDS OF QUEENSLAND.

We all know of the Cuckoo in the Old Country, writes the Queensland correspondent of the "North Queensland Register," and even those of us who have not been there have read of that bird's lazy habits as regards nest building—how it takes advantage of another's industry. But how many of us know that we have a bird with us here which has similar habits (the coo-ee bird we call him, though his correct name is Koel), and that he belongs to the Cuckoo family? He is a black bird, and his wife dresses quietly in grey. These birds go away for part of the year, but just now round outside Brisbane the male bird is persistent in his cry. "Coo-ee!" he seems to call, and his wife answers "Quick! Quick! Quick!" It is nesting time, but it is not that they are in a hurry to build. They do not find pieces of twigs and leaves, and soft feathers to line little warm nests—not they! The male bird also calls "Warra, warra, warra," and one often hears this cry through the night.

As I write there is a picture before me, and the sound of a multitude of bird voices. Dozens of those quaint looking and quaint voiced birds, the Leather-heads, are rioting amidst the yellow bloom on a tall, silky oak tree. The golden glow on the tree is beautiful against the sky, but one hardly knows how lovely these silky oak flowers are until one gathers a spray and looks into the heart of it. As the flowers mature, little spikes of yellow are released and stand up, tipped with the palest of green tiny knobs. At the base of these spikes there are stripes of red, and here in the wee cups is the honey. One has only to put one's finger on the moisture and taste it to realise what a harvest the birds reap with their wondrous busy tongues—a harvest of honey. No wonder there are birds galore, for all the thousands of little cups are filled. Birds of all sorts which love honey collect there, and they know that their lives are protected in these grounds, no boy, big or little, being allowed to hurt or frighten them.

The Essentials of Aviculture.

By J. W. N.

(Continued from page 184.)

A Series of comprehensive articles, embracing the proper management of all kinds of birds in captivity, their housing, feeding, general management and diseases, and the breeding of species, Mules and Hybrids.

IT is always best to allow the two birds to fly together during the winter, or to share a double breeding cage with a wire division. In this way they become quite accustomed to each other, and this is another of the secrets of success.

Every effort ought to be made to get green food, but where this is impossible, fruit, such as apple or pear, must be substituted. Germinating seed is an article of diet which does not have sufficient attention at the hands of breeders. It is in this state that birds obtain most of their seeds in nature, and it is so easy to produce that a supply should always be at hand. All that is necessary is to sow some seed on flannel which must be kept damp and in a warm place.

When Breeding Time Comes.

Towards the breeding season the diet should have many of the more stimulating seeds included in it—hemp, maize, niger, maw, gold-of pleasure, are all useful in this respect, and it must not be forgotten that the principal seed of the Goldfinch in the wild state is the thistle.

A good plan is to give the staple mixture as usually advised for the individual birds, and in addition on three days a week let them have a mixture of some of the seeds mentioned above, on the other four days a few grains of cracked hemp being given.

With this treatment and the observance of facilities for bathing on all possible occasions, the birds will come quickly into breeding condition when the season arrives, and the results may be looked for with a good deal of confidence.

The signs of birds coming into breeding condition are unmistakable, and if further proof be needed the beak of the Goldfinch will be seen to be almost clear, whilst that of the Linnet is slaty-blue. These points, with the fact that the cocks will be in full song, and the hens flapping excitedly from perch to perch, are sufficient indications.

The same method as advertised for Canaries when mated is all that is necessary, giving special notice to the eggs where the Goldfinch is concerned, as he has an unfortunate propensity for poking his long beak into them. To prevent this a bunch of flowering grasses, a millet spray, thistle heads, etc., can be hung up near the nest, and the restless Goldfinch will vent his destructive powers on these to the benefit of his mate's eggs. However, if there is any sign of inquisitiveness in the nest he should be at once removed.

As a rule Mules leave the nest much earlier than young Canaries, and are able to feed themselves sooner, and so are easier to rear. I have only mentioned Goldfinches and Linnets as cock birds to breed from, but the Greenfinch, Redpoll, and Siskin are all successful parents and are comparatively easy to get into condition.

Some Pretty Hybrids.

If Mule breeding requires a good deal of skill, the breeding of Hybrids will tax the ingenuity and patience even more, as British hens in cages prove very poor mothers, and foster-parents have usually to be resorted to.

To mention a few favourite crosses, there is the hen Bullfinch, mated to the cock Goldfinch, Greenfinch, Redpoll, Linnet or Siskin. Fertile eggs have been obtained from all these crosses, but these are only a few of the combinations that can take place, and from the above list any two birds of different sexes can be chosen with the possibility of a successful result.

The only member of the Finch tribe that had better be omitted is the cock Bullfinch. Unfortunately he has proved a failure, and if the hen Bullfinch has had an opportunity of mating with one of her own kind she is very often the same. It is as well, then, if breeding from the Bullfinch is contemplated, to obtain a young bird and keep her isolated from her own species. A visit to a big show will demonstrate the numbers of crosses that can take place, and will probably serve to kindle the enthusiasm so necessary for the successful breeding of these beautiful birds.

The aviary, of course, is the ideal home for the breeding of Mules and Hybrids, and many of the troubles incident to cage breeding do not assume the same importance here. Do not forget in putting birds in an aviary for the purpose of Hybrid breeding to let the hens have it for a week all to themselves. In this time they will have chosen their nesting sites, and when the cocks come along there is less likelihood of prolonged quarrelling.

British birds, at any rate the Finches, do not nest as early as Canaries, so on an average May is the most propitious month for starting breeding operations. Just as in Mule breeding, the parents ought to have become thoroughly acquainted with each other during the winter. The question of feeding has been gone into in the case of Finches for muling, so need not be repeated.

Many types of cages have been advocated for hybrid breeding, and most of them aim at giving some seclusion to the nest. If a double breeder is used, and a panel of wood nailed, or, better still, screwed on in front of the nest this is really all that is required.

A Nesting Tip.

In regard to nests, if one can obtain the old lining of that of a Thrush or Blackbird, and supply nesting material as near as possible to that used in a state of nature, the hen can sometimes be prevailed upon to build her own home, but, if not, then this must be done for her. As a stand for the nest, a flowerpot, not too high, does very well, or what I have found even better is an empty shaving bowl.

A difficulty which requires carefully handling arises in dealing with birds whose diet differs. As an example, in dealing with a Bullfinch and a Siskin some plan must be devised for keeping the Siskin away from the food of the Bullfinch, otherwise he will make such a feast that all hopes of breeding will for the time being have to be given up until the deranged internal organs again allow him to think of other things. In this case the slide of the double breeder should only be pulled out for a short time, and, while out, the Bullfinch's seed hopper can be temporarily removed to be returned later on.

British hens sometimes have the unhappy knack of allowing their eggs to drop when they are on the perch instead of depositing them in the nest, with the result that they get smashed. When a hen shows any tendency to this course of action the perches should be lowered and hay or some similar substance spread thickly underneath. As the eggs are laid they should be removed and kept in a cool place until the full clutch is obtained.

As stated before, it is better not to trust to the hen to hatch out the young, and here two courses are open. One is to remove the eggs to the nest of a Canary, giving her eggs to the British hen to passify her in the event of her wishing to sit. This is quite a good plan provided the Canary does not get frightened at the young and refuse to feed them as is sometimes the case. If all goes well, however, she must be supplied with insectile food as well as the usual egg food.

Wild Birds as Foster Parents.

A better plan is to transfer the eggs to the nest of a wild bird such as the Greenfinch or Linnet, and allow her to look after the catering department for the first 10 days. In this way the young have a much better chance of surviving, and at the end of that time can be removed and hand-reared on egg food with a little insectile food and a few live ants' eggs.

Mention has only been made of British birds, but Mules and Hybrids can be obtained from foreign species, although this branch of aviculture is still in its infancy. Mules have been obtained from foreign Finches and Canary hens, and some interesting hybrids have occurred amongst Parrakeets in captivity.

For all these the aviary is practically essential. In fact, all Mule and Hybrid breeders should endeavour to use the aviary. Its advantages are numerous, not the least of them being the fact that the hen will usually rear her own young and so obviate the tedious necessity for hand-rearing.

It will be seen by the above very brief outline of this fascinating branch of breeding that it is not easy, that it requires a good deal of time and patience to be devoted to it before satisfactory results are obtained. At the same time, the fact should not be underestimated that luck very often plays a strong part; the fickle goddess sometimes bestows her smiles on the veriest novice, while she persistently refuses her favours to the seasoned veteran.

(To be continued.)

Nests of Birds, Poultry, etc., should be regularly sprinkled with KEATING'S POWDER, especially when hens are sitting. Don't forget to do this just previous to the eggs hatching, to destroy the Red Mite. Kills all insects. Harmless to everything else.

THE CROSSBILL.

The Crossbill is not very generally kept as a cage bird, either as a pet bird or for exhibition, but a tame Crossbill makes a charming pet, and a good specimen is certain of recognition by the judge. The Bird in our picture won 2nd prize at the Holborn Hall Show for its owner, Dr. M. Wilson, Pannall.

The Breeding of Linnet Mules.

By "British," Chopwell.

THE breeding season is now near upon us and many young fanciers will have the birds paired up and also probably be going into ecstasies over the signs of high breeding condition which their pets evince. Once or twice lately during spells of fine weather I have been tempted to allow my birds to run together, after watching the vigorous antics of the cock birds and the flapping wings of the hens, but experience is a great teacher and has caused me to forbear to do so.

I am essentially a Mule breeder, and, like many other fanciers, I made my initial success as such in the breeding of Mules with the Linnet and Canary, birds which yet hold first place in my estimation. In this article I shall set forth a plan of action which I have always found highly satisfactory when breeding.

The Treatment of the Linnet.

I think no one will question the statement that in the breeding of Linnet Mules the most important bird is the Linnet. There are very few steady, housemoulted Linnets who will refuse to pair with a suitable hen Canary if both birds are properly attended to.

When choosing a Linnet from a dealer, try to obtain a bird with a good shaped body and a good thick neck, for I have often found that if that is not given good consideration the youngsters will have a tendency towards "snakiness."

When you have chosen a bird for breeding purposes, he should, if possible, be kept in a Linnet stock cage in the living room from the latter end of November to the beginning of March, and then he should be removed to the bird-room.

It is surprising how tame birds become thus treated; they become steady and gain more and more confidence every day. If possible speak to the bird every time you pass his cage, and make a point of re-adjusting either the seed or water vessel, so that he may learn that your movements do not bring him any harm. The method of feeding of the the Linnet advised in CAGE BIRDS Linnet Nutshell I find admirable for bringing and keeping him in condition.

For exhibition purposes it is perhaps best to try to establish a light muling strain by judicious crossing and in-breeding; but as I breed the Mules chiefly for their song I am not well acquainted with this. Some fanciers I know try breeding with dark hens in the belief that the young will be healthier birds, but I prefer a clear yellow Norwich, and often obtain grand offspring from these.

There is certainly no fixed time for the commencing of the breeding season. Some years I have known it begin with the advent of March, but this year—well, fanciers know the conditions which have prevailed so far. I let the birds run together in the same cage, but with the wire slide in, from about the beginning of March, thus giving them time to get used to each other, and when the weather seems to have at last become settled I draw the slide and let them in together.

Valuable Green Foods.

In regard to the diet when paired, I generally manage to steer a middle course, studying the likes and dislikes of both the Linnet and the hen. When procurable, I offer an abundance of green food such as shepherd's purse, chickweed, and especially dandelion, both leaves and seeding heads; the two birds will partake of any of these with relish.

It must not be forgotten that during the period when he has the whole of the breeding cage to exercise in, the Linnet will have a tendency to get a little wild, and to counteract this he must be carefully watched. When he appears to be on good terms with his mate, and when in her turn she shows the unmistakable signs of wanting to go to nest, supply them with a nest-pan and nesting material. The Linnet often shows not the slightest interest in the building operations of the hen bird, although I once possessed a bird, twice house-moulted, which even helped the hen in "setting up house."

Whether to remove the cock bird or not after the arrival of the eggs depends upon the nature of both himself and the hen; some Linnets are useful with eggs, and some hen Canaries will leave the nest if he is removed.

On about the thirteenth day of the hen's sitting supply some egg food, the young may be expected at any time. Young Mules I find do very well on the same treatment as young Canaries. Supply the egg food regularly, and, if the hen feeds, everything should go swimmingly. I find chickweed and other forms of green food valuable assets in rearing young mules. Mules leave the nest much sooner than young Canaries; as soon as they do so they will begin to pick for themselves, as they are very hardy.

I would now like to give some advice to young fanciers. Don't sell or part with your young Mules, unless known hens, until after the first moult, for it often requires this to bring a bird to his best; many a bird thought a "waster" has moulted out a winner.

These few remarks are founded on my own methods, and I shall be very pleased if they assist novices in any way, for I consider that there should exist a greater "give and take" spirit amongst fanciers and less "trade secrets."

Bird Societies and Governing Bodies.

By "NAPOO."

A fancier of wide experience, who prefers that his name should not be published, states his reasons why in his opinion a governing body is not necessary.

IN the past many discussions relating to the establishing of a governing body have appeared in CAGE BIRDS, and at such times it has been more or less impossible for me to "enter the lists," but, having a few spare moments on my hands, I should like to give you some impressions resulting from a lifelong experience with the fancy and fanciers, particularly concerning cage-bird societies during the last fifteen years.

It would, perhaps, carry some weight if I mention that it has been my lot to sit on many committees, important and otherwise, to help found societies, and to act in various official capacities, and that during this period the ways and manners of my colleagues have been by no means without interest. During this period I have, like others, seen the start and finish of "Unions" and "Federations," and have also not failed to notice the types of individuals constituting the membership of societies.

Types of Fanciers.

Conspicuous enough are the following:—(1) The man who catches rampant "bird fever," comes in with a rush, buys up everything he can lay his hands on, and then fizzles out in from two to four seasons and is no more heard of. (2) The "sticker," who was born a fancier, sticks to his fancy, cannot be shaken off by any adversity, and, often at the cost of his own pocket (which may not be deep), is the backbone of his society. (3) The individual whose experience is so slight that he has not plumbed the depths relating to occurrences which older hands know must turn up, and who, without first ascertaining full particulars of the matter before him, believes that he can make everything plain sailing at once. (4) The ready "promiser" of all sorts of things, help, assistance, and even prizes, but who is nowhere to be found when the business commences. (5) Those who under great disadvantages give up valuable time trying to link together almost impossible chains, and who have no axes of their own to grind, but who are just genuinely interested and will do anything within reason to support their section, and so forth.

These remarks are, perhaps, a little wide of the subject, although relative thereto, but have been mentioned in order to give those who may not know an idea of the material with which one has to contend.

Most readers of CAGE BIRDS know that as a fancy their hobby of exhibiting birds does not at once appeal to the general public so readily as does that relating to dogs, horses, cattle, poultry, etc., and in consequence, except in their own circles, their work goes on relatively speaking behind the scenes.

People That Help.

They also know that outside any "professionalism" that may here and there be attracted to it, the financial status of their societies is not heavy, and that it would be almost impossible to run large or even small exhibitions unless they could depend upon the financial assistance of enthusiastic or wealthy members.

This being the case, it is more or less unavoidable that clubs and societies should be numerous, perhaps more so than is really advisable, and in consequence we find membership running from any number between 50 and 200, rarely the latter, and subscriptions often not more than 3s. 6d. to 5s. per annum. I think it is, therefore, obvious that the hobby cannot very well be styled as that of a rich man.

There is but little necessity in many cases for committeemen to attend more than from 12 to 20 meetings in a year; in fact, the whole annual business of the average cage bird society could be conducted in half the time usually expended upon it. It is, moreover, a pleasing feature that the necessity of dealing with an offender is comparatively rare, and that, taking them all in all, cage-bird fanciers are remarkably good sportsmen. Naturally one cannot expect in a mixed body of men to find all angels, but a chairman with tact can usually dispose of the complaints of a "grouser" satisfactorily.

The formation of local societies is largely brought about in consequence of the members more often than not being working or business men who cannot spare time or money to travel any distance, and, this being the case, with societies dotted about here, there, and everywhere, the business of any society cannot consist of matters of very great moment. That is to say, there very seldom, if ever, occurs any matter that members cannot settle themselves.

Irrespective of the choosing of the date, classification, and so forth, connected with a local or open show, together with such matters as may arise with reference to annual outings, lectures, or entertainments, it is seldom that anything occurs. Societies fall into the way of avoiding wherever possible the clashing of show dates, but even should this occur we must not overlook the fact that they are separate bodies, and have an equal right to choose their own date.

A governing body cannot well do this, because as often as not outside influences may make it impossible for their ruling to be acceptable alike to society A, B, or C, as the case may be. Then, again, concerning these very rare offenders that may be convicted of fraud, no society requires assistance from outside to deal with them. It is quite easy to sever connection with them, and they are, perforce, dealt with as far as penalties are concerned by the usual rules embodied in show schedules. Moreover, following on this, such matters are reported to the specialist societies under the guidance or support of which section the offence may occur. Through such medium an offender who may be proved guilty will find it exceedingly awkward, at any rate, to continue illicit practices.

Probably specialist societies, when they conduct business properly, i.e., minus dictatorial methods, are the best safeguards against the continuance of trouble of this kind, and, moreover, when they support sections by seeing that competent judges are provided, and also a decent classification (which, where possible, they should help to support by providing it by guarantee), there is very little chance of any matter arising that cannot be dealt with under the ordinary club or show rules of a society.

Why Delegates Fail.

To put it in a nutshell, no body of men are in a better position to deal with their own affairs than the committee, and as far as I can see, directly you adopt a governing body and have yourselves (i.e., any society) represented by delegates, you at once entail the waste of a lot of time, and sometimes money, over matters that any ordinary business man would settle in about ten minutes.

This does not necessarily apply in the large centres of Canary breeding, where, perhaps, a large number of clubs exist devoted to one particular breed of Canary, be it Yorkshires or Norwich, and where some sort of local Union may prove of mutual benefit, but generally speaking, provincial and London societies who may hold open shows ought to be able to cope with their own affairs without outside interference or ordering.

I know that in past years, when societies were affiliated it has been a matter of impossibility for the best business men of a society to attend a delegates' meeting, and in consequence someone quite unfitted for the work has been appointed, the result being that a matter which, after all, was of ridiculously small importance has been carried over two or three very uninteresting meetings, and the members in the end were about as wise as when they started, or were very much dissatisfied with a verdict, many of them objecting to a purposeless levy.

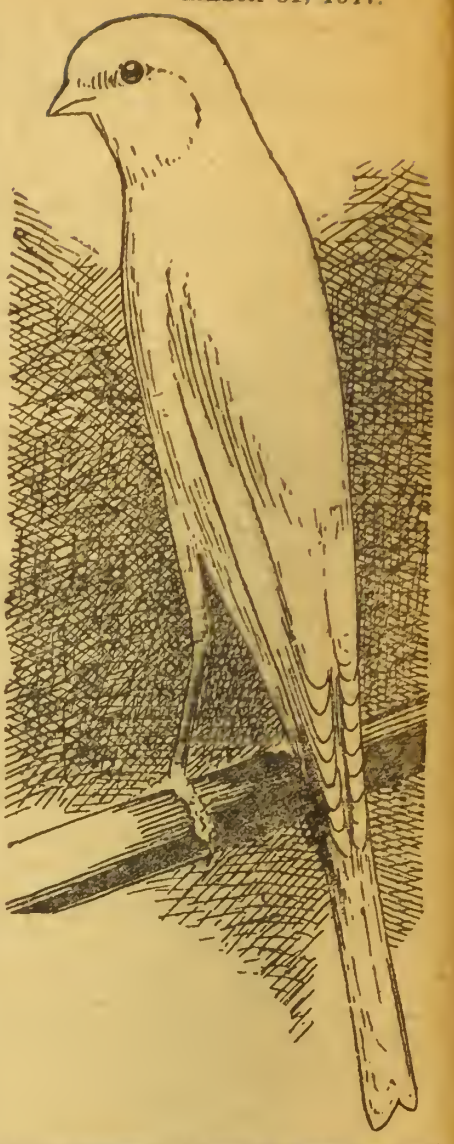
No Safety in Numbers.

Taking a "looker on's" view of the situation, it seems that the smaller a committee is, within reason, so much the better, and that a tactful and good chairman, thoroughly intimate with the fancy and its workings, is a necessity, and that when a committee is composed of men who are not out for their own ends, but for the common good of the society, things work easily enough.

As these officials, including secretaries, are usually elected annually by the votes or propositions of the body sitting, it should not be difficult to remove incompetent or undesirable men, and it usually takes members but a short time to ascertain the calibre of their associates. A popular man is not necessarily a suitable man for a post, but a business man with the interests of his society at heart can prove a veritable tower of strength in times of trouble or dissent.

Of course, one meets with those who object to a few men running a society, and who think, for some curious reason, that this should not be. It has, however, been my experience that when such has been the case they did get on with the business, and accomplished something, and that men of the type capable of taking matters in hand are always ready to give vouchers for all they do; in fact, the usual rules of a society should provide for necessities of the kind, and interested members should see, both by audit and by inspection, that things are as represented. The mere taking for granted of a report is as unfair to the preparer of it as to the society itself, and good business men like all their work properly checked, if only for self satisfaction.

Concerning the foregoing statements, I wish it to be understood that I do not put them forward in a dictatorial sense. I may be quite wrong in my ideas according to the experiences of some, but I certainly have found the workings of societies conducted with greater ease and with less dissatisfaction when untrammelled by outside interference, which sooner or later causes loss of membership.



This fine specimen of a Yorkshire Canary won 2nd prize at Croydon Show for Mr. R. Mudd, Croydon.

The Kea, the Kaka and the Kakapo

New Zealand Parrots which have Changed their Characters.

By L. B. THOBURN-CLARKE.

(Continued from page 170.)

MY first experience of the great brown Kaka was gained from a tame one belonging to a neighbour. This bird was possessed of almost fiendish intelligence, and a capacity for mischief only equalled by a small monkey. When he had accomplished anything particularly wicked he would fly on to my shoulder, and, leaning forward, would stare up into my face with a look of impish mischief that was almost humanly evil in its expression.

I was only a small child at the time, and the Kaka constituted himself my principal torment, and I was terrified by the uncanny impishness of the bird. He would fly over to our place in the twilight and seek me through every room until he found me; then, watching for an unguarded moment, he would fly on to my shoulder and nip my ear with his powerful beak.

My scream of pain would be echoed by a wild whoop of delight as he flew away to await another chance of torturing me. The very sound of his pattering feet on the veranda would send me seeking frantically for safety behind locked doors, while the Kaka would patiently wait on the doormat watching for me, until some one, answering my frantic appeals, seized the bird and carried him off. He never attacked anyone else in the same way, so I suppose my terror amused him.

He was very knowing, and, although he pattered all over the garden and house from early twilight until ten o'clock at night, he would vanish mysteriously the instant the clock struck, so that he should not be locked up in his cage. He was quite friendly with the numerous animals, and would visit the big duck-yard and amuse himself waddling up and down. He never attempted to touch the ducklings, and he was quite to be trusted with cats and kittens.

But every skin heartbrug was torn to scraps, and, if he could manage it, he would in the course of a night have the window-frames bitten through and the glass in pieces on the ground. Cups and saucers were pushed to the edge of the table and knocked over just to hear them break with a crash on the kitchen floor. He fully realised that he was doing wrong, for he would screech with delight.

Another Kaka which I owned a few years later was a most amusing bird, and loved walking, following me about like a small dog, but he invariably slept during the day, only waking in the late afternoon. He loved climbing the tall blue-gum-trees in the garden, and would scream defiance to our entreaties to him to come down.

He climbed straight up the trunk after the usual Parrot manner, but always came down backwards. Gripping with his beak a piece of bark or a projection of wood, he would drop his feet straight down, then catch hold, and cling while he twisted his head down as low as possible, taking another grip with his beak, and repeating the process until he had reached the ground; then he waddled after me. No calling would make him come down, but the sight of me opening the gate would bring him scrambling down, as he dearly loved a walk in the twilight.

We fed him on fruit, and during the summer he would gather and eat all he required in the orchard. I never saw him attempt to find insects, nor did he trouble to suck the honey from the flowers. He was exceedingly fond of sweets and sugar, and was very mischievous.

One of his favourite tricks was to come in very quietly, and remain hidden until the middle of prayers, when he would suddenly fly on to my shoulder with a screech which was most startling. If shut out of the room he would go round to the window and endeavour to get in. He loved to catch hold of anything that was being shaken, and would sit on a sack, almost asking to have it dragged over the ground.

When he wanted anything he would catch hold of my dress and try to drag me in the direction he wished. At night he was shut up in a large outhouse with the dogs, and when he got dissatisfied with his own kennel he would drive out a dog and take possession of the kennel he coveted.

He was very quiet, but sometimes he would call to his relatives as they flew past, and one day, when he was about eighteen months old, he flew off to join them, and I never saw him again. He was much missed, for he was always amusing, and his mischief had such a thought-out element about it that it was interesting to try to fathom the reasoning power of his brain.

The Kakapo (*Strigops habroptilus*), another large Parrot, has changed, not its food, but its physical habits, owing to the difference in its surroundings. A nocturnal bird, always feeding on the ground, and admirably concealed by its protective colouring of freckled green, so closely resembling the moss on which it feeds, the lack of ground vermin big enough to attack so large a bird has made this Parrot lose the use of its wings.

Sir Walter Buller, in speaking about this, states that the wings are apparently large and strong, but, although the muscles are developed, they are overlaid with a quantity of fat, and the bird never attempts to use them.

The Kakapo appears to have been very plentiful in the days when Sir Julius Haast observed its habits while he was exploring the west coast of New Zealand in the early sixties. He speaks of the true habitat of the Kakapo as being the "mossy fagus forest near mountain streams, with occasional grassy plots, but it also lives on the hillsides, amongst great masses of rocks in which it has its holes or burrows." These immense rocks were mostly overgrown with roots of trees and a deep covering of moss.

He saw "one sitting on a fuchsia tree, feeding upon the purple berries, but as soon as it saw him advancing it threw itself off the branch as if it had been shot, and disappeared amongst the huge fragments of rocks strewed along the hillside." Apparently it never attempted to use its wings.

(To be continued.)

Correspondence.

EVERY WEEK A PRIZE OF TEN SHILLINGS IS GIVEN FOR WHAT, IN THE OPINION OF THE EDITOR OF "CAGE BIRDS," IS THE BEST LETTER PUBLISHED UNDER THIS HEADING. THE LETTER MAY BE ON ANY SUBJECT. IT MAY BE A COMMENT, FOR OR AGAINST, ON ANYTHING WHICH IS PUBLISHED IN OUR PAGES, AN OPINION ON THE POLICY OF OUR PAPER, OR MAY HAVE NO REFERENCE WHATEVER TO ANYTHING WHICH HAS ALREADY APPEARED. SO LONG AS IT IS ON A "BIRDY" SUBJECT, AND IS ORIGINAL, IT WILL BE ELIGIBLE TO COMPETE FOR THE PRIZE.

The Prize this week is awarded to Mr. J. T. Whitaker, 54, Tempest Road, Leeds.

Birds on the Doiran Front.

An Identification Problem Solved.

SIR,—With regard to the two ducks which puzzle your correspondent, the first is difficult to make out, but I think he may mean the Red-Crested Pochard. It should be common down there, and taking the description as in general terms, I should say that is the bird. The other duck is no doubt the Smew, which, of course, if one of the sawbills. Genus, Mergus.

The Starling is very interesting, and I will find out when and where it was ringed. Meanwhile, could you get me the date on which it was shot, as that is not mentioned. It is, as you suggest, a Russian ring. There is a scheme for ringing similar to mine, with its centre in Moscow. We have had two Starlings previously reported in England with the Moscow Ornith. Committee ring, both these having been ringed in Livonia. There is another (separate) scheme in Finland (Helsingfors) under Professor Palmer. H. F. WITHERBY.

We hope Mr. H. Donnan, who enquired in our issue of March 24 about the Starling, and whose question is kindly answered by Mr. Witherby, will be able to forward the date on which the Starling was shot as reported in his letter.

Mr. J. Currie, Edinburgh, has also kindly identifies the birds mentioned in the article, "Bird Life on the Doiran Front," which appeared in our issue dated March 24.—ED., CAGE BIRDS.

Economical Hints for the Birdroom.

Green Food from Waste Seeds.

SIR,—During these trying times no doubt fanciers, like all others, are ever on the lookout for methods of saving expense. The price of seed of all kinds has gone up immensely, and therefore it behoves us to try and economise wherever possible.

First, to a town bird-keeper, is the difficulty of obtaining fresh green food, and it usually means buying the same from the greengrocer, either lettuce or watercress. With those who live on the outskirts or in rural districts this difficulty is soon overcome, and much can be saved in the seed bill by collecting the various green foods and seedling plants well known to fanciers. I am able to get a fair supply easily, but at the same time I like to have a bit in reserve if time does not permit to go and gather wild food.

This is one of my methods. When sweeping up the bird-room there is always a certain amount of seed scattered from the cages, no matter what sort of feeding bottles are used, then there are also the siftings when one is clearing the hoppers out. Instead of throwing this waste into the dustbin, it is easily turned to saving by sowing in shallow boxes and the sprouting seeds given to the birds again as food.

I usually throw them on to the garden and just rake them over with a fork, and during summer time I can always lay hands on a bit of fresh greenstuff. This latter plan has its disadvantages, however, for it brings the Sparrows around the garden, and they in their turn bring the stray cats, the bird-keeper's enemy, although the latter I am not much troubled with, as I keep a good Terrier dog, and am fairly handy at digging a hole with a spade.

The egg bill may also be lessened by those who, perhaps, only keep one pair or so. If a whole egg is not required each time, it can be kept quite fresh even for 24 hours if turned cut side down into a saucer, covered with oatmeal, and an inverted cup placed over it. I tried the latter plan years ago when I used to breed one pair only, and it was a success. One's own nest moss may also be gathered in the autumn and dried for the next season. I have kept birds for many years now, and have always gathered my own each season.

W. LIDGETT.

HEALTH & STRENGTH

Deals with all kinds of athletics, including Football Wrestling, Boxing, Weight Lifting, Fencing Running, Ju-Jitsu, Gymnastics of all kinds, Swimming, &c., &c. Gives free advice on all questions of Health, Diet, &c. to all readers EVERY THURSDAY, 1d. Sold Everywhere. Get a copy to-day, or send for Free Specimen to "Health and Strength," Windsor House, Kingsway, London.

Nets and How to Use Them.

A Side Net Described and Illustrated.

SIR,—In reply to J. D. Griffith's letter, I will answer his questions in rotation. Mr. Griffiths asks me what size nets I use for Goldies and Linnets, and their colour on grass land. The nets I chiefly use for Goldies are 18ft. by 5ft. I find this size will take most flocks of Finches, besides being easy and quickly set, and they will work quickly in a moderate wind. For Linnets my nets are 30ft. by 5ft.

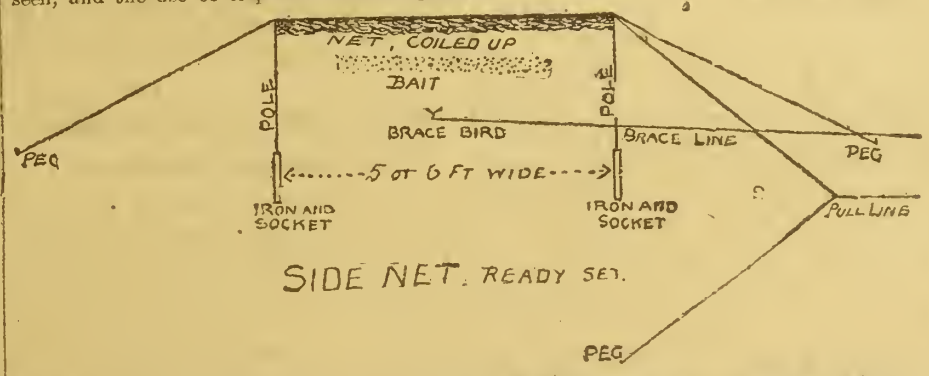
I prefer green netting if it is the right colour green, but most nets bought from the makers dyed "green" are bird scarers. So it requires a little foresight. Ask your dealer to dye the nets grass green, or light brunswick; the nets are invisible if the right colour is attained.

A side net is a single net, chiefly used for catching Bullies, or in places where clapnets cannot be set. I have had great results with this net with Goldies and 'Polls. Very often in farmyards where a thresher has been at work in winter a number of Goldies are to be seen, and the use of clapnets is out of question. I took a whole flock of 18 with a side net 24ft. by 5ft. in a farmyard, on a bank where the wild seeds had been thrown, working the net down hill. I might add there were 100 odd Greenies and Chaffies. Yellow Buntings and other common birds such as are found in stackyards in winter. This proves a side net is invaluable, as clapnets on a bank, especially the one I mention, would be out of the question.

A side net should always be 5 or 6ft. wide; the staves required for a 6ft. net should be 2ft. 11in. long, and the net when set is coiled up under the top line, so from the tip of stave when set to when over, the amount of ground covered is 5ft. 10in.; the extra 2ins. prevents strain on back pegs when net is over.

Mr. Griffiths also asks me if bird catching is a paying hobby. In quick reply I answer yes, and providing the birds are not kept long on hand if he is going to sell his catches to dealers; if not, well he will still find a big profit besides having the great opportunity of selecting from the catch. It is advisable to remove a peg or two if birds are together; this prevents possible escape.

F. W. STOWE.



SIDE NET. READY SET.

The Care of Canaries.

Maxims in Metre.

SIR,—

If any Canaries you have in your care,
Don't blind them with sunshine or starve them with air,
Or leave them out late in the cold and the damp,
And then be surprised if they suffer with cramp,
Or open the window in all kinds of weathers,
Quite near to their cage, till they puff out their feathers.
The birds that are free fly to bush and to grot
If the wind be too cold or the sun is too hot,
But these pretty captives depend on your aid,
In winter for warmth and in summer for shade.
When they chirrup and ceaselessly hop to and fro,
Some want or discomfort they're trying to show.
When they scrape their bills sharply on perch or at wire
They are asking for something they greatly desire.
When they set every feather on end in a twinkling,
With musical rustle like water a sprinkling,
In rain or in sunshine, with sharp call-like notes,
They are begging for water to freshen their coats.
Cage perches and vessels keep all very clean,
For fear of small insects; you know what I mean.
They breed in their feathers and leave them no rest;
In buying their seed choose the cleanest and best.
I feed my Canaries (excuse me the hint)
On hemp and canary, rape, millet and lint.
I try them with all till I find out their taste,
The food they don't care for they scatter and waste.
About their bright cages I hang them a bower
Of shepherd's purse, chickweed, and groundsel in flower.
At a root of ripe grass they will pick with much zest
For seeds and small pebbles their food to digest.
But all should be ripe and well seeded and brown,
Few leaves on the groundsel, but plenty of down.
In summer I hang them out high in the shade
About our hall-door by a portico made.
A bath about noontide on every mild day
Will keep your small favourites healthy and gay.
In hot summer sunshine some calico green
In front of their cage makes a very good screen,
On winter nights cover from lamplight and cold,
And they'll sing in all weathers and live to be old.

W. CRUTCHLEY.

Wild Seed for Caged Birds.

How May it be Preserved?

SIR,—Last season I collected a large quantity of wild seed, viz., the seed of dandelion and thistle, and after troubling so much over it I kept it in large airtight tins, but after a few weeks it got mouldy, and therefore quite useless. Is there any simple way of separating the seed from the down and drying it? I would be much obliged to any one who can give me a few hints on this matter.

NOVICE.

Breeding Goldfinches in Captivity.

Methods which Should Command Success.

SIR,—As the Goldfinch is such a favourite with all, a few remarks on how to breed him in captivity may be helpful. The present is a good time to make a start. Procure one or two pairs at once, selected for size if possible. Put each pair in a double breeding cage, and hang up in the living room, or in a room where people are constantly passing in and out. This will do more than anything else towards getting them tame, which is, I think, the main thing for success in breeding. Feed on the best mixed seeds, with thistle and dandelion seeds in addition, also give a little green food, groundsel, etc., every day.

Undoubtedly the best place for breeding is in an outdoor aviary, which need not be an elaborate affair. In my case, it was a boarded-in place, 5 ft. square and 6 ft. in height, the front was glass about 1 ft. down from the top (I whitewashed the glass over on the inside), a door was in one end, and at the other end was a wire netting flight, about 3 ft. in length, and part of the house at this end was wire netting to allow them sufficient air.

If you have, or can build, a place similar to this, prepare for the breeding season as follows:—In each top corner of the house fix up some bundles of evergreen shrub, spruce, cedar, etc., or, failing these, some heather or fir. If these are not procurable, get some twiggy pieces of pea sticks, etc., tie these up, and twist some dry grass or weeds round the outsides, to give the birds as much privacy as possible. Also, if possible, get some branches of Scotch fir and fasten them across the top of roof (these birds are fond of building in this tree in a wild state). Each corner site should be arranged so that a depression is formed in the centre, and a little moss can be put in each place.

Strew the floor with coarse sand and some old mortar beaten up fine. If you can get it, collect some lichen from the bark of trees, or an old Chaffinch nest pulled to pieces will do, also some sheeps' wool, feathers, moss, and horse or cow hair; scatter these on the floor. In a wild state the nest is composed of lichen, moss, and wool, and mostly lined with the fluff from the seed heads of the wild clematis. In the country a bird lover can often see these birds pulling the inner lining from a nest of the previous year and taking it to line the new nest. In captivity a very good substitute is the fluff from thistle heads. I always save some over from the previous year.

Having your place ready, turn in the birds about the end of April. Supply with the same seeds as previously, give plenty of green food in variety, and, most important of all, disturb a little as possible, and they will breed and rear the young, but if one is always going inside to see how things are progressing disaster will follow. The birds will not eat egg food, but seem to rear the young mainly on green food and the seeds they like best.

H. HOOD.

Some Birds of Ceylon.

Notes by a Tea Planter.

SIR,—Your offer of 10s. for the best letter on any bird subject has tempted me to have a try. I have been a tea planter for the last six years in Ceylon, and having been a keen lover of nature all my life I made the study of the birds of the Island my [illegible]. I happened to be in the same district for the whole time I was out there (up country at about 3,000 to 4,000 feet elevation), so do not get much chance of getting really at home with the water birds and waders, etc., as my trips to the low country were few and far between, but I had ample scope during my rounds to observe the habits of all the others.

I think the chief thing I noticed out there was that a great number of birds can be quite easily "called up," provided the "caller" can mimic their notes fairly well. Four birds in particular I can remember "calling up" most successfully, the Scimitar Babbler, Forest Bulbul, Bligh's Whistling Quaker Thrush, and the Ceylon Spotted Thrush; the last two are peculiar to the Island. I dare say the reason why these birds are easy to "call up" is because their notes are easy to imitate, being mostly a series of whistles, and I think the cocks of these species are of a slightly pugnacious disposition, or perhaps only inquisitive.

I remember once finding a nest built at the end of a low branch of a Dadap tree (a tree used for shade out there), which contained two greenish blue eggs, spotted and blotched with brownish red markings. I did not know to what species it belonged, but thought it might be the nest of the Spotted Thrush, as I had seen a brownish bird slip off it.

I withdrew to a short distance, and started imitating the song of the cock bird. This was immediately answered, and in a few seconds he came up nearly to my feet, seemingly in a furious rage, and no doubt thinking I was an intruder come to make love to his mate during his absence in search for food.

The most satisfactory thing was that the hen, on hearing her mate (or the bogus one) singing, and thinking the intruder, who had rudely disturbed her, had gone, returned to her nest, and after sitting for a few seconds by the side of it with head cocked on one side quietly slid on to her eggs; the cock bird by this time had retired in shame and confusion behind a tea bush, "fed up" at being so grossly deceived.

Jungle Cock (also peculiar to Ceylon) may also be called up by the well-known method of slapping the hand on the thigh or a folded up pocket handkerchief. This is about the only way to get a shot at them, except an occasional pot at one as he rises out of the tea on the edge of the jungle, into which they wander in the early morning and evening to get grit.

I remember trying to call up one in a small patch of bamboo jungle. I was sitting on the side of a path clapping a folded up handkerchief at intervals, but could not call him near me. I got up to retrace my steps, when I saw the old warrior on the path behind me only a few yards away, no doubt laughing for all he was worth at my fruitless efforts to lure him to his death; he rose, and I had a hurried shot at him, but missed. Of course, the slapping of the handkerchief is meant to represent the clapping of the wings of a cock preparatory to a fight, and jungle fowl are, like our own barn door cocks, very pugnacious, and always ready for a scrap at any time. I could write many instances of interesting things I have seen out there in connection with bird life, but will reserve them for later, that is to say, if you can find space for such a long-winded epistle as this.

CORRESPONDENCE.

(Continued from page 187.)

Oxalic Acid for Red Mite.

Sir,—The correspondence in Cage Birds is a treat. Old Helpmate's reply in Cage Birds March 24 is interesting and instructive, for he seems to know something about these things. If cages are done with whiting or limewash, with dissolved oxalic acid added to it, you could dip the ends of perches in the same, and it would do away with the danger Old Helpmate speaks of, i.e., dipping perches in water solution of oxalic acid.

G. L. Beddall.

A Clear Explanation Why it is Non-poisonous in Conjunction with Lime, but Very Dangerous in a Water Solution.

Sir,—As a very new reader of your paper who has already appealed to you through your query columns for advice on an ailing bird, and who in response has received a very full and prompt reply, which I appreciate very highly, may I be permitted to do a little to show that appreciation by trying to be of some use to others of your readers who are interested in the above subject, as evidenced by letters in your correspondence columns.

First, let me say that I happily know nothing about red mite, except that it is an insect which is, as I gather, very harmful and obnoxious to birds if it makes its appearance in a cage, in the crannies and crevices of which it hides and multiplies. But I know something of oxalic acid and lime, concerning the use of which for the purpose of destroying red mite there is a difference of opinion amongst your correspondents; hence my desire to contribute.

Lime Kills the Poison.

Oxalic acid is a rather dangerous poison, indeed, it is a powerful one. Even in small doses of a dilute solution it is harmful to all living organisms owing to the fact that it forms with calcium (see below) an insoluble salt, and therefore robs the organism to which it is introduced of calcium in solution, a sufficient quantity of which is necessary to its well-being. If taken in strong solution it causes death by corroding the tissues with which it comes in contact. I have no doubt, therefore, seeing that it will kill a man, it will also kill red mite—or a bird. If used about a cage in which a bird is kept, it should be used with extreme care.

Lime, as most people know, is prepared from limestone in one or other of its forms, e.g., marble and chalk are chemically of the same nature. Limestone, marble, chalk, etc., are all compounds of the metal calcium (with which, as stated above, oxalic acid forms an insoluble salt) with another solid (carbon) and a gas (oxygen). When heated or burned under suitable conditions as in a lime kiln, the whole of the carbon is driven off in combination with part of the oxygen, and calcic oxide or "Lime" is left still in hard lumps.

If this hard lime is allowed to go cold, and as soon as it has done so, whilst still quite fresh, is sprinkled with water, it will crumble into a fine powder, or if thrown into water will form a soft cheese-like paste, and in doing so either will generate great heat—the water will literally boil, and carts laden with quite fresh lime are said to have sometimes been set on fire by a shower of rain.

How Oxalic Acid Acts.

This fine powder or cheesy paste is calcium hydrate or "slaked lime." By mixing with more water until it becomes of a consistency of a thin cream, we get the limewash which we use to whiten our walls or cages. In adding this water no further heat is developed, and no boiling takes place. Again, if oxalic acid be added to it, whether in crystal or dissolved, no boiling will take place either, and no appreciable heat will be developed. But something else will happen—the oxalic acid will be "killed," and will be no longer poisonous, for the "insoluble salt" above referred to will have been formed, and this is innocuous. If a man takes a poisonous dose of oxalic acid, and it were safe to give him a dose of fresh limewash, and this were done quickly, his life would be saved, or at any rate he would not die from oxalic acid poisoning.

If Mr. Beddall has never found oxalic acid make limewash boil, the above paragraph explains the reason—it is because his limewash has always been fresh and in good condition. But let him take say a teaspoonful of his fresh limewash, and put it into a clean glass bottle with say a half pint or so of clean water and shake it well, then let it stand a day or two (corked) until the lime has settled and only a clear liquid (limewater) remains above. Then let him remove the cork carefully so as not to disturb the settled lime, and add a drop or two of his dissolved oxalic acid, and he will see a white "cloud" form at once in the clear liquid. This "cloud" will quickly precipitate to the bottom of the bottle—it will not dissolve again. It is the insoluble salt (calcium oxalate) before mentioned.

But lime, whether in the form of a powder, paste, or wash, or in the burned lump, has another property. It readily absorbs carbonic acid if exposed to its action, and there is plenty of carbonic acid in the air. So that wherever the air has access to the lime as it has when the lime is washed on to our walls or cages, or is left in an open container, this absorption takes place, and the lime again becomes, in composition, what it was before it was burned—the same as limestone, chalk, marble, etc. If a solution of oxalic acid is dropped on this, "boiling" will take place—this is not a real boiling with appreciable increase of heat however, it is merely the result of the release of the carbonic acid which causes it. If Mr. Beddall will let some of his limewash stand exposed to the air in the bucket for a few weeks, and will then take a little of the upper layer, put it in a smaller vessel, and add a little of his oxalic acid solution, he will, I have no doubt, see something of this "boiling," though it may not "take the chill off." The whitewash which "boiled" in "Old Helpmate's" hands would be old whitewash, having become a mixture of chalk and limewash owing to this absorption of carbonic acid during long standing exposed to the air.

It is to reinforce "Old Helpmate's" warning that I write. The mixture of oxalic acid and limewash might, I should say, be used with safety, the oxalic acid, being killed by the lime, probably would not injure either the bird or the red mite. I will not dogmatise on the latter though, because it is quite possible, though it does not seem very probable, that the insoluble oxalate of calcium may in some way be destructive to the insect though harmless to man. Both "G.L.B." and Mr. Beddall say the mixture killed the red mite, but that is not conclusive, as there is nothing to show that the pest would not have disappeared without the application of the mixture. But no one who values his birds should think of dipping either his perches or any part of his cages which the birds could peck in dissolved oxalic acid and leaving it to dry on. That would mean grave risk to the bird for the reason given by "Old Helpmate."

If oxalic acid is used about a cage at all I should suggest that the most effectual way of using it would be to first wash out the cage, allow it to dry, then wash it over again with a not too strong solution of the oxalic acid, paying particular care to get it into all cracks, corners, and crevices likely to harbour the pests; allow this also to dry, and, finally, wash the whole over with the some care as to the cracks, etc., with plain limewash to which no oxalic acid had been added, being careful to apply this to every part and particle of the cage and its fittings to which the oxalic acid had been applied. The ordinary washing would remove the dirt, the oxalic acid in its unaltered state would kill the vermin, and the limewash following that would in turn kill the poison and make all safe.

But why not try the petrol recommended by "W.R." on February 17th. If, as he says, it is efficacious in destroying the red mite, I have no doubt it will be both easily applied and harmless to bird life. But care should be taken to use it, if possible, in the open air or in a well ventilated room, and certainly not to do so anywhere near a fire or a light.

J. T. Whitaker.

Timely Hints for the Breeding Season.

Some Notes for Novices, by an Old Hand.

Sir,—The breeding season is now close at hand, and perhaps a few hints on matters relating thereto may help a novice over the style. Many men, many ideas, and although I do not wish to pose as an authority, and am always willing to learn from others whose experience is, perhaps, greater than my own, I can fairly well claim to many and varied experiences during my long time in the fancy.

I am not a great believer in unnaturally forcing birds to breeding condition quickly by a lot of stimulating food, but, at the same time, one must understand that the Canary is now a domesticated breed. Nature is nature the world over, and if left entirely to their seed diet alone I have no doubt that a pair of Canaries would reproduce their kind, but whether the progeny would be as strong as those that had been brought up under a pair that had had the usual care and attention devoted to them by careful breeders is open to doubt.

My own methods for several years past have been as follows, and I have bred a few good ones during that time. About January 1 usually put the hens in one large flight and the cocks in another, and their food is a staple diet of plain Canary (best Spanish) and twice a week an equal quantity of red rape and hemp seed. On one of the days when this is not given I let the cocks have half a teaspoonful of maw seed each, and the hens the same quantity of niger.

In the middle of February I start with the egg and biscuit once a week, one fresh egg to eight family biscuits, and this they have each week until the middle of March, when it is given twice weekly instead. I also give a small quantity of sprouting leaves of the dandelion as soon as these are to be obtained.

By the first week in April I begin to put the pairs together. As my aviary is outdoors, I think this early enough, and often even in this month there are cold nights, and these all tend to the chance of egg-binding. The wire slide is closed until the pair get on amiable terms, and when they begin to feed each other it is withdrawn. I then put in the nest pan and a small quantity of nesting material for a start, until the hen begins to nest in earnest, and then enough is put into the cage for their requirements.

If all goes well, one can look for the first egg from seven to ten days after, sometimes a little earlier. I always remove the eggs as laid and substitute a dummy. On the evening of the third day, providing the hen has laid each day, I dust the nest with Keating's and replace the eggs just before the hen goes to her nest for the night. I never trouble to look whether a fourth or fifth egg is laid until I catch the hen off the nest, and then I take a peep. I disturb as little as possible during the period of incubation, and on the evening of the thirteenth day I put a little egg food in again. I might mention that while the hen is sitting her diet is plain Canary with a small quantity of rape once a week.

If the cock is amiably disposed I leave the pair together, otherwise I part them. I have reared good birds with the hen feeding alone, but I prefer the two parents feeding if this can be arranged, as it is a great strain on a hen to feed a nest of lusty youngsters alone, and then expect her to be in the pink for breeding a second nest straight away.

After the third day I give just as much egg food as they will clear up, and also hemp seed and green food is given. As soon as the young are able to leave the nest I put them on the other side of the breeding cage and let the old ones feed through the wire division, and the second round is then gone on with. It is necessary to colour feed if one's stock is for exhibition, but this I will leave for another time.

W. Lidgett.

Some Notes on the Skylark.

And Its Keeping in Captivity.

Sir,—I thought I would write you a few words about the Skylark and its keeping in captivity. The Skylark is an easy bird to cater for, and will do well even with live food, which, being a soft-bill, is his natural diet. I give biscuit meal scalded and mixed with equal portions of sharps and barley meal. Sometimes a little bread and milk, and most days a very small portion of minced meat, either raw or cooked, and he is very fond of a little hard boiled egg.

I use an ordinary box cage 36 inches long, and 18 inches high, and 18 inches from back to front. At the bottom is from three to four inches of sand, and the turf is put into a small oblong tin behind which the bird can retire if he doesn't feel sociable, but he will generally show himself for a call; they are very intelligent, and soon become tame.

I find in a cage, unless great care is taken, their feet will become clogged, and as soon as this appears to be the case the bird should be taken in the left hand, covering the wings firmly but gently, so that the thumb and fingers nearly meet under it. Shake the feet in a shallow dish of water, rubbing gently with the fingers of the right hand. When all the grit is swilled away, turn your hand over so that the bird is quite on his back, and dry the feet with a soft towel; then, if needed, is the best time to cut the claws. Take off the top of the sand, and stir it well up, for the bird will take a good dust bath as soon as he is put back.

The song of the Lark is the most beautiful of all our captive English birds, but in freedom this beauty is doubled and trebled by reason of its travelling whilst singing. The notes are dispersed and multiplied until it seems a veritable shower of song, especially when its mate is at nest I have been tempted to try my hand on a little rondel about him; here it is:

Bird on the wing, in Heaven's blue dome,
Crystal clear fountain of song you sing;
Right to the gates of Heaven you roam,
Bird on the wing.
High out of sight, yet I hear you fling
Passionate notes like the dancing foam;
Down they fall where the wild flowers spring,
Bird on the wing.
There on the ground is a nest—your home;
Honey sweet joy to your mate you bring;
Safe while you sing, aloft in the gloam,
Bird on the wing.

We know that the Skylark in nature is a very pugnacious little thing, and I have been told by a catcher that he will claim a whole field, and allow no other Lark near, so they sometimes put a looking glass under the nets, and whilst he fights his own reflection he is caught, but my bird, since he lost his wife last summer, has allowed a little hen Hedge Sparrow to share his cage, and sings away to her as soon as it is light in the morning. Both, needless to say, were hand reared.

(Mrs) E. M. Sargeant.

Hints on Canary Breeding.

Procedure in an Outdoor Bird-room.

Sir,—I venture to write a line or two on the methods I adopt in the breeding and rearing of Canaries. It is three or four years since I first started in this fascinating hobby, and I have derived much pleasure by keeping these bright little creatures.

I keep my Canaries in an out-door bird-room, which is not heated in any way. I do not believe in heating a bird-room. If the birds cannot stand the natural temperature, I consider they are not in the best of health, and, therefore, not available for breeding purposes. A week or two ago the temperature in my bird-room was so low as to freeze the water in the drinkers, but the birds were none the worse. They are as hardy as any British bird.

The cages I use are the compartment cages, which can be made into flight cages, measuring about 5 ft. by 1 ft. 6 in. by 11 in., by removing the two slides. I run three or four birds in each of these flight cages for the moult, and as February approaches I replace the slides, and put one hen in each compartment ready for the breeding season.

The diet now consists of three parts Canary seed to one part rape. I also give one teaspoonful of the following mixture: Equal parts hemp, maw, niga, linseed per bird per week. About the beginning of March I give this mixture twice a week, and I generally find the birds in fine condition for breeding about the end of March, without giving any egg food to bring them on.

I generally run one cock with three hens, and if the weather is pretty mild about the end of March I start the first pair off housekeeping. About a fortnight from the time they gain access to one another the first egg may be expected, and as a prevention of egg-binding I give a little niga seed a day or two before the egg is due, which can be gauged by the fullness in the abdomen.

When incubation commences I cease giving the mixed seeds and give as the staple diet three parts Canary seed to one part rape. On the thirteenth day of incubation I give a little pure yolk of egg chopped very finely, and if the weather is warm I give the hen a bath, and the moisture which is carried on the bird's plumage to the eggs softens the shells, and helps the young ones to break their way out. The bath need hardly be given for the first round, as the air at this time is generally laden with sufficient moisture.

Supposing the young to hatch out all right, I give a little pure yolk of egg. The next day I mix nearly the same quantity of bread crumbs with the yolk, and the third day and onward I give one part egg (yolk and white) to two parts bread crumbs. I also give cracked hemp in quantity from the third day. I have found that some hens will rear a brood on cracked hemp alone, and not touch the egg food.

Should I find the hen to be a bad feeder I give her a bath, with a teaspoonful of common salt added to the water, which generally has a good effect, or a little Epsom salts added to the drinking water sometimes proves beneficial. Some hens, no matter what you give them, or how you treat them, will not feed their young. Such hens should be discarded from the breeding room, unless they are of a very good type, and you want some young ones from them, and are prepared to give the young ones to some good feeding hen to bring up.

I do not give any green food, as I have an idea that this causes diarrhœa in the young, and the undue watery evacuations cause the trouble in the hen known as sweating. If the egg food is made too rich, it may also cause the same trouble.

When about three weeks old the young will be ready to leave the nest. At this stage some hens will pluck the young ones, and take the feathers to line the nest for the next round. In this case I put the young ones in a nursery cage hung on the front of the breeding cage, so that the hen can still feed them through the wires, but will not be able to pluck them. I put the cock, which should now have got the third hen to nest, with her again for the second round, and so continue until I have had three nests from each hen.

To the young in the nursery cage, which may now be picking a bit for themselves, I give, in addition to the egg food, cracked hemp, Canary seed, and Canary seed that has been soaked in water for an hour or two. As they become able to crack the dry Canary seed, I gradually diminish the egg food, until they are on hard seed, but the egg food must not be stopped too suddenly, as many losses are caused by doing so. It is a good plan to give a little egg food, say once a week, until they have moulted, or as a change a little bread soaked in milk is very beneficial.

When the young are able to look after themselves I remove them to a large flight cage, where they can have plenty of exercise, and get themselves in good condition for that very trying time, "the moult," when so many are lost.

Kenneth.

(Correspondence continued on next page.)

CORRESPONDENCE

(Continued from page 183.)

Inbreeding and What It Does.

A Practical Experiment to be Tried.

Sir,—We are progressing. We have now one of the opponents of the system acknowledging that it may be of use. During the course of the summer correspondence Mr. Gordon Stewart sent me a letter from a Norwich exhibitor and breeder, which, without his permission, I cannot divulge or even quote, but perhaps if he sees this correspondence he may write you himself. From the letter it was quite evident that he believed in inbreeding, and that several well-known and successful breeders-exhibitors practised it with Norwich Canaries, and owed their success to it, so that even amongst the chubby ones the system may produce good results. In my own variety several friends are pairing relations, and out of 15 pairs with which I hope to breed this season 7 or 8 will be blood relations, some close, others remote, so that I hope to be able to give your readers the benefit of my observations after the close of the season, which I hope to do without prejudice.

T. C. Crawhall.

Linnets for Contest Singing.

A Host of Questions.

Sir,—Will you please inform readers of Cage Birds I am quite willing to answer their questions on Linnets, providing they enclose a stamp for reply. I have received up to date over 40 letters, and nearly in every case correspondents mention how interested they were in my article on Linnets. I beg to thank them all for their kind remarks.

Messrs. J. Dant, W. Lyons, F. Ellis, A. Turner, R. Rees, C. Dunn, H. Richardson, G. Bamforth, and J. Shaw ask whether it is better to have a young bird for training than an old one. My answer is: I prefer a young bird, but age does not really matter, providing the bird is quite healthy and well on its legs. I had a bird which won first prize at the Windsor Castle, Leeds, when he was 22 years old. The bird on that occasion sang very well, but someone spoke during the sing, and an objection was raised, the first prize being awarded to Mr. Chippendale's famous "peeing" bird, and my bird having to be content with second.

Messrs. R. Bean and T. Walker ask if a Linnet can be forced into moult. "Yes, but the process is an unnatural one." To Messrs. Griffin, Smith, Wilson, DeVine, Yeadley, Dawson, and Hudson my answer is "Yes." In reply to Mr. Ward, "I do not know if it is true." In reply to Mr. B. Newton, "I have never given watercress." Messrs. W. Tucker, R. Best, G. Dobbs, E. Hale, S. Harvey, H. Fletcher, etc., were good enough to enclose stamp, and I have answered their questions through the post.

I hope the above answers will satisfy my correspondents, for if I had to answer them individually through the post I should be at least 10s. out for stamps, that is if the letters continue to come in as they have done. I really did not think they would be asking questions from me.

Fred Allen.

Sir,—I have already sent one letter answering questions put to me by several fanciers. I have received more letters on the subject, and I noticed a letter in your last issue signed "A.J.B." I am very pleased indeed to learn that "A.J.B." is a lover of the Linnet, and in answer to his letter I would say that I do not breed my Linnets. There is no need to do this when they are so cheap. I used the two Linnets mentioned in training others, in other words I used them as schoolmasters. I am certain that in his case the feeding is radically wrong, otherwise I fail to see how he could lose all his youngsters. Why does he not consult one of his local fanciers? Surely one of them could put him right.

Fred Allen.

The Federation of Roller Societies.

A Judge Declines Engagements.

Sir,—I have read with much interest the correspondence published in Cage Birds about the federation of Roller clubs, and as I am a member of the Provincial Roller C.C., which is a federated club, and of the British Roller C.C., a non-federated club, I should like to make my position quite clear. It is my intention to remain a member of both clubs for another year, and I will then decide whether it is advisable to remain in both clubs.

The federation of Roller clubs is a very good idea, but I cannot follow them the whole way. My objection is to a portion of Rule 6. I have just had a circular sent me which makes it clear that no member of a federated club can judge at a non-federated club show. I have said I am going to retain my membership of both clubs. I am also going to accept their ruling where the entry of birds is concerned, but I am not going to accept either club's ruling when it affects my personal liberty, which they have no right to touch. I would like the fancy to understand that I am not saying this in any spirit of defiance; I am just trying to make known to any club who might desire my services as judge that I cannot offer them terms. My reasons for stating this is to save time and trouble.

To those of the fancy who might not know the rule I will give it: That no member of a federated club shall contest at other than federation contests, and that no judge connected with a federation club shall judge at other than federation club contests, under a penalty to be fixed at annual delegate meeting." As I am not in agreement with the latter portion of this rule, I deem it wise not to accept any offers to judge at forthcoming contests.

James Lyons.

More About Glucke Tours.

Sir,—Again I beg your indulgence to allow me to reply to Messrs. Montague, Barnett, and Tomlinson. Mr. Montague now begins to use wild statements which have no foundation in fact. I will only deal with one such statement which concerns our own club, and that is, "The two outstanding clubs would not even condescend to discuss the question of federation." This clearly shows Mr. Montague does not know the usual proceedings at club meetings, where all correspondence to the secretary is read to the members. As regards the Midland Club, I may say that all the letters we have received from Mr. Best, the secretary of the Federation, have been read and discussed by our members, and where a reply has been required the same has been sent. Every time the federation business has come up (in all about five times) a vote has been taken, and every time it has been unanimously decided that we do not join the Federation.

In reply to Mr. Barnett on the ring question, it will be as well for all fanciers to know that up to now the patronage of the B.R.C.C. has been given to all clubs with the condition that birds shown in the two young bird classes must be B.R.C.C. rung, and all clubs accepting the patronage were expected to abide by the conditions imposed. It has certainly been to the advantage of the clubs holding the shows, as it meant anywhere from 50 to 100 entries, which is a great consideration from a financial point of view. The rule in question bars a man from showing at an unfederated show in any class. We do nothing of the kind, for there are three other classes the birds could be shown in, providing, of course, the fancier is eligible to show in them; the rings do not matter, either B.R.C.C., P.R.C.C., Continental, or no ring at all, so that, however black Mr. Barnett may paint us, we shall bear comparison with his or any other club in the country.

Now, as regards Mr. Tomlinson and the Glucke. I mean the old Bell Glucke and the new Bell Glucke. I give Mr. Tomlinson credit for having very well defined the Bell Glucke in his letter. I call that the old Bell Glucke because it was the first we knew of it in this country, and it was certainly, and is now, a most beautiful tour when done well, but the new Bell Glucke, so called, is totally different. From birds I have heard that have been given points for Bell Glucke, and which certainly do not bring the old Bell Glucke, I came to the conclusion that the Hollow Glucke was being called Bell Glucke, and am still of that opinion.

The conversation Mr. Tomlinson refers to as having taken place in my room took place some seven or eight years ago, and I can't say whether I was pulling their legs or not. I even cannot remember who the third fancier was. But if the question put to me was the same as printed, viz., "Whose Glucke is that?" the probability is that the answer given is correct, because to answer the question one would connect it with some particular fancier. Had the question been "What Glucke is that?" a different answer would most likely have been given. The Glucke in question was a Bell Glucke, and a good one as well, but I had at that time also some good Hollow Glucke birds. One I have still left who was a champion then, and still delights us with his beautiful Glucke, although he must be ten years old.

As I said before, Mr. Tomlinson gives in his letter a very good description of the old Bell Glucke, viz., the Hollow Glucke with the Bell intonation. The Hollow Glucke pure is as near the "glucke, glucke" of the ordinary house fowl when calling her chicks as one can describe it. It is entirely without any rippling, watery sound, and is delivered with a small pause between each "glucke, glucke." The more separate and distinct the gluckes are the more valuable it is.

Now this Glucke in some birds is brought rather quickly, not joined up sufficiently to be called a Glucke roll, and from what I have seen and heard at shows, that is the Glucke that has been called the New Bell Glucke, and, as I said in my last letter, it is not a new Glucke, but the old Hollow Glucke coming to the front again.

We will take the song of a first class contest bird, and in imagination will draw a line right through the middle of it, and I think to take the Hollow roll as about the centre of its song pitch, which it generally is, will be about right. Now his song, from a musical standpoint, will be either on that line, above it, or below it.

Now think of the song. All the tours with Bell joined to their name appear above that line, say the Hollow Bell just above it, Bell tour and Bell roll higher still above it, and the Bell Glucke must also be above it, or the word Bell cannot apply. We have no Bell tours lower in pitch than the Hollow Boll, and as some examples of what I have heard described as the new Bell Glucke have been delivered much below that line in pitch I contend they are not Bell Gluckes. One bird in particular brought his Glucke very deep, after a very deep water glucke, and then finished with bass.

I am quite aware that birds do not always sing the same, that is, before the judge and at home, but so many birds have been given credit for Bell Glucke, and not for Glucke, that exhibitors begin to want to know where they are. I am quite aware that mistakes can be made by judges in the song as sung before them at times; none is infallible—nobody knows it more than myself. Yet I contend that there should not be such differences in the naming of tours between different judges as now appear on the judging sheets, and the hope that the matter can be cleared up a bit is my excuse for writing at such length.

It would be good for the fancy generally if some of the exhibitors would give us their views on this matter, and as Mr. Tomlinson claims his honesty of purpose in calling these tours what he does, I take it he will allow other judges and exhibitors the same privilege. As to what a judge should do when he meets the bird Mr. Tomlinson quotes that brings a clear Water Glucke or a Hollow Glucke without any trace of the Bell, in addition to this Bell Glucke he described, I should say he should give points for the Water Glucke, also for the Hollow Glucke under the Glucke heading on the sheet, and also for the Bell Glucke under its correct heading, because if all the tours are good they should be given credit.

Queries Answered

For Rules see last week's issue.

CANARY QUERIES

Answered by CLAUDE ST. JOHN

HOARSENESS.

T. W. B. H.—(1) As you have already cured the wheezing symptoms with the remedy advised in another reply, it is quite possible that the hoarseness which is left behind will gradually disappear as the bird gets into full song if you have taken the most important step of seeing that the exciting causes of the trouble are removed. If the symptoms have not already disappeared you may give the following concoction instead of plain water to drink two days in every three for a week. In a teacup place a small teaspoonful of linseed, a piece of Spanish liquorice the size of a small marble, and as much chlorate of potash as will cover a shilling, fill with boiling water, cover, and infuse beside the fire for half an hour, stirring occasionally until the Liquorice is dissolved. Then strain off the clear fluid, add a teaspoonful of lemon juice, and give in the drinker in place of plain water. (2) There is no particular seed or seeds that can be truly said to keep birds on song, or make them sing, other than those which most closely supply the natural food of the birds and thus maintain and promote a high condition of health and vigour. The seed mixture frequently advised in these replies, or a pinch of a mixture of equal parts maw, sesame, and gold of pleasure seed, in addition to the usual seed diet, with an occasional morsel of egg food and green food, is as good as anything for this purpose. Your dietary might be improved by dropping out the linseed, and the cod liver oil, otherwise it is not a bad one. Cod liver oil, though a valuable adjunct in treating ailing birds, is rather out of place in the regular diet of healthy birds. (3) The paste you refer to is made by well mixing together a teaspoonful of cod liver oil emulsion, ditto of pure honey, as much chlorate of potash as will cover a shilling, ditto of powdered grain of paradise, adding whilst mixing a sufficiency of finely powdered biscuit to bring the whole to the consistency of soft cheese. Stick a small cube between the wires when necessary. A morsel given to the bird referred to in No. 1 for a week or so would help the other treatment.

SWOLLEN ABDOMEN.

Anxious, E.8.—The symptoms point to liver trouble, and you would be well advised to look well into the quality of your seeds and foods, especially any hemp you may use, to see if all are quite sound and sweet. Give a staple of plain canary, and in addition give a morsel of bread and milk sprinkled with maw seed every second day for a fortnight or so, and on the alternate days give either a pinch of mixed seed and a morsel of banana, or half a teaspoonful of boiled summer rape. Keep in a fairly warm place as free as possible from rapid and violent changes of temperature, and for the first three days give in the beak two drops of a mixture of equal parts of pure salad oil and syrup of buckthorn daily. After this dissolve a crystal of sulphate of soda the size of a small pea, ditto of sulphate of iron half as big, in two tablespoonfuls of water, add six drops of dilute sulphuric acid, and give the mixture in place of pure water two days in every three for a week, and every second day for another fortnight afterwards.

MAKES WHEEZING NOISE.

A Novice.—You ought to have given a few details as to how and where you keep the bird. Any way, treat as follows for a fortnight or three weeks, and if not well in that time please write again and give this necessary information. See that the bird does not hang near or over burning lights in the evenings, nor high up near the ceiling, and do not let it be exposed to cold direct draughts nor rapid extremes of heat and cold. In addition to the staple seed diet give a piece of bread the size of a hazel nut, soaked in cold milk, drained, two drops of cod liver oil emulsion on it, and sprinkled with soft sugar every second day, and on the alternate days give a morsel of banana, boiled carrot, or green salad. In the drinking water every second day for a week add six drops of syrup of rhubarb and as much Epsom salts as will cover a sixpence, and after this give instead four drops each of oxymel of squills, ipecacuanha wine, and sweet spirit of nitre two days in every three for a week, and if not quite free from the wheezing, then continue the latter every second day for another week.

RINGING AND UNFLIGHTED.

R. H.—(1) There is really no hard and fast rule as to the correct age to ring young birds with closed rings. It depends to a certain extent upon the breed, and also the size of the young. In a general way the correct time will be found to come somewhere between the seventh and ninth days after hatching, the larger breeds or birds being ready for ringing about the seventh day, and the smaller breeds about the ninth day. (2) There is no necessity at all for methodically soaking the seed for young birds starting to feed themselves. The soft food is not discontinued all at once, and the young will continue to get sufficient moist food from this source whilst gradually becoming accustomed to the dry seed in its natural state. Summer rape, which is sometimes given to the hens to assist them in feeding large broods and may also be given in moderation to the young as an extra after they are taken away from the parents, may be soaked in cold water, or scalded with boiling water. The latter would be preferable for young just doing for themselves. (3) The term "unflighted" means a bird that is still wearing the flight and tail feathers with which it left the nest. It is therefore, always a bird that was bred only last season, and in this sense naturally means a bird that has not been bred with previous to the present season. But if bred with early this season, and then unmatched, it would still be properly termed an unflighted bird until it had moulted its flights, which would not be before the natural moulting season, notwithstanding that it had been bred with earlier in the season. The Canary, you must know, does not naturally shed its tail and flight feathers at its first moult, and unless these have been forcibly removed it remains an unflighted bird until its second moult. In former days it was the custom to extract these feathers at the first moult, and the bird was then termed a "flighted" bird, but the practice has long been obsolete.

PANTS HEAVILY.

A. Mcl. R.—Keep the bird in a fairly warm temperature, and guard against draughts and extreme fluctuations of heat, as outlined in last reply, and then treat the bird as advised to "S. G. P., Bedworth," and also keep a morsel of the paste advised to "T. W. B. H. (3)," both in this issue, stuck in the wires for it to peck at when it likes for two or three weeks, and continue the other part of the treatment until a week after the feathers have quite ceased dropping. If the panting symptoms have quite disappeared and the bird appears in quite good health and active, there is no reason why you should not mate him for breeding a little later on in the season. It will be quite useless, however, to do so until about three weeks or so after the moulting has quite ceased.

BALD AND SCURFY.

P. Clarke.—Keep the cage and perches as clean as possible, and it would be judicious to keep the bird isolated for the present in a cage by itself. Allow it to bathe freely if it desires to do so, but do not try to force it to bathe. In addition to the ordinary diet, give a morsel of bread and milk slightly dusted with flowers of sulphur, and then sprinkled with maw seed every third day for a fortnight, and on the intervening days give first a morsel of boiled carrot or some kind of green salad, and add to the drinking water ten drops of lemon juice and a crystal of sulphate of soda the size of a small pea. Continue this treatment for a fortnight, then miss a week, and resume and give it again for another fortnight. As a local application, you may carefully anoint the bare skin, without soiling the surrounding plumage more than is quite unavoidable, with Lanocyllin ointment or Jeyes' veterinary ointment, and then dust it over with dry flowers of sulphur twice each week for a month.

OBSTINATE DIARRHŒA.

C.B., Waterloo.—Stop giving the bread and milk, continue the same staple diet, and otherwise treat as follows for three weeks. Do not give any green food at present, and give every third day a morsel of banana as before in lieu of any other fruit. On the intervening days give first a small teaspoonful of a mixture of equal parts hemp, teazle and broken groats, and next about half a teaspoonful of a mixture of equal parts crushed arrowroot biscuit and maw seed given dry. Keep a piece of cuttlefish stuck in the wires for the bird to peck at. In the drinking water add six drops of tincture of catechu and four of tincture of opium two days in every three for a week, and then give instead a teaspoonful of ordinary chalk mixture in the water every second day for a fortnight. Before adding the latter to the water remove the vessel for an hour or two, then put in the mixture, shake, and put it on the cage so that bird may drink before it settles down to the bottom. Give the vessel a shake occasionally afterwards. If the bird has acquired a habit of drinking very copiously, you may at the end of this course add six drops of dilute sulphuric acid to the water daily to prevent it drinking too much, and gradually discontinue this as the habit is broken.

PROLAPSUS.

A. W.—This trouble is not very amenable to treatment in hens, especially at this season. It may be caused by the strain of expelling an abnormally large egg, or eggs without shells or imperfectly shelled, so that it is useless trying to breed with such birds. Keep the bird in a moderate-sized cage where it can get a fair amount of exercise; feed on the ordinary diet with just enough green food to prevent constipation without causing any undue

looseness. When the part becomes displaced, catch the bird and bathe it gently with a small dossil of wool with a cold solution of wych hazel—a teaspoonful of the extract in a saucerful of water—then absorb the moisture with the wool, so as to leave the bird as dry as you can, and gently return the part to its natural position with a piece of smooth and bluntly-pointed wood, similar to the end of a lead pencil, or the tip of a bone knitting pin which has no sharp point. Use no force or unnecessary pressure, but "coax" the part back into its normal position, and then insert a morsel of gall ointment, which you will get at any chemist's in small quantities. A piece about the size of a hemp seed will suffice. Repeat this treatment as often as a recurrence happens. If this does not cure the trouble, there is nothing else that can be done except a small operation, which would have to be done by a veterinary, and the value of the bird would, of course, have to decide whether this is worth while.

DIFFICULT EVACUATIONS.

E. J. G. P.—The symptoms you describe are not in any way connected with egg-binding, but may arise either from constipation, the bird being overfat, or to something in the diet. On the latter point you are quite silent. Try the following treatment for a fortnight, and if the bird is not well in that time, please write again, repeating particulars, and say whether the bird is in a plump condition or otherwise, and how you feed it. See that your seeds and any other items of food you may give are quite sound and free from decay, and especially see that any hemp you may give is sound and sweet in the kernel. Give a staple diet of a mixture of three parts canary to one part summer rape, and in addition give separately every second day half a teaspoonful of a mixture of equal parts hemp, black rape, inga, teazle and linseed, and on the alternate days give a piece of bread and milk the size of a hazel nut sprinkled with maw seed. A small spray of watercress or any similar green salad daily if you can get it quite free from frosted or decaying portions, may also be given. In the water add ten drops of syrup of buckthorn and a crystal of sulphate of soda the size of a split pea for three consecutive days, and after this give instead six drops of dilute sulphuric acid and four of tincture of opium two days in every three for a week, or until the symptoms have quite disappeared.

REMOVING EGGS.

C. G.—(1) Sample of rape marked No. 1 is not summer rape, but one of the so-called bird rapes. It is of only fair quality, and the appearance of the sample suggests a rather large amount of dust in the bulk. No. 2 is a nice mild sample of summer rape, but is very dry and broken—probably old stock, and being free from mustiness is none the worse for that. No. 3 is not rape at all, but cole. It is a very good all-round quality of this seed. No. 2 would be best to form a portion of the staple diet of Canaries; the other two are better adapted for use in seed mixtures for occasional use as tit-bits. (2) It depends upon the composition of the enamel whether a solution of camphor in methylated spirit would do it any harm. If the enamel had a spirit base the solution would soften and destroy it sooner or later, according to the frequency or liberality with which it was applied, but if made with an oil base it would not be seriously affected by the solution—perhaps not at all. You may form a fairly correct judgment what base it is from the smell of the enamel when using, the rapidity of drying, and the medium advised in the directions for use to be used for thinning if it becomes too thick. Quick-drying enamels have a spirit base, and methylated spirit will be advised for thinning; oil enamels are more slow in drying, and turpentine is recommended for thinning. (3) No harm whatever will result from allowing an egg laid in the morning to remain in the nest until mid-day before removing it. Its chances of hatching will not be affected at all. Remember to leave in a nest-egg of pottery for the rest of the day, as some hens need it to settle down properly. There is no need to move the pot-egg about. Place it in when the first egg is removed, and allow it to remain until you are returning the clutch for the hen to commence sitting.

IN SOFT MOULT.

S. G. P., Bedworth.—Am not sure whether I have your initials correct. This abnormal moulting is not in the least degree infectious nor contagious, so the bird you purchased could scarcely start the trouble amongst your birds. Possibly there has, either known or unknown to you, been a slump in the temperature of the place where the birds are kept which has affected all alike and brought about the condition. See that they are kept in a comfortable temperature, not necessarily overheated, but free from sudden and violent fluctuations and direct cold draughts. In addition to a staple diet of three parts canary to one part summer rape give a piece of bread the size of a hazel nut, soaked in cold milk, drained, two drops of cod liver oil emulsion on it, and sprinkled with maw seed every second day, and on the alternate days give a small teaspoonful of a mixture of equal parts hemp, niger, white millet, teazle, and broken groats, and a morsel of banana, or two or three crisp young leaves of dandelion—the latter for preference if you can get them. These quantities are meant for each bird. Dissolve half a drachm of ammoniated citrate of iron and quinine in an ounce of sherry, add a small teaspoonful of honey, and give 20 drops of this in the water two days in every three until the feathers cease dropping. It will be useless mating the birds until about three weeks after the feathers have quite ceased dropping.

REARING DIFFICULTIES.

Hardee.—Yes, the food you name has been repeatedly used with success for rearing young Canaries from the shell without the addition of the usual egg, so I see no reason why you should not also succeed with it, and by preparing the food in the manner you suggest you will certainly have the best chance there is to succeed with it. In all these cases of egg substitute the parents, and especially the hen, are the deciding factors in success or failure. Really good feeding parents, and in particular a good feeding hen, will undoubtedly rear all the breeds hatched with a food of this description, if they appreciate it them elves, practically as well as they will on the orthodox egg and biscuit. I note you attribute your losses last season in some degree to your method of feeding which you describe briefly as pure yolk, soaked seeds, etc., etc., as so often advised. But I would point out that neither pure yolk nor soaked seeds are very often advised in these columns for regular use in this direction. At most, the former is recommended for a few hours only after hatching, say for the first day, and soaked rape is advised only when the young are getting ready to leave the nest and require a lot of feeding, or to help to tempt whimsical hens to feed more freely. It is neither necessary nor advisable to soak any other seeds. If you have not already got it, get our manager to send you a copy of "Canary Breeding for Beginners," 7d., post free, and you will find full details of foods and feeding during the time the young are being reared. It is quite possible your feeding would be at fault last season.

CAUSE OF DEATH.

Greenhorn.—To get any really reliable opinion about the cause of death you ought to have sent the body to our post-mortem examiner, as per rules under that heading, as soon as possible after death had occurred. Any opinion based on a description of symptoms before death can only be so much guesswork, whereas a proper post-mortem might have revealed very definite evidence. In a general way I should say the bird was of a very highly-strung nervous temperament, and eventually became afflicted with a mild form of epilepsy, most likely during a period when it was run down or weakened by anæmia, which attacks increased in strength and frequency as the bird got weaker, and when it had come to a very low condition the late severity of the weather finished it. To take your definite questions in order: (1) Most probably epilepsy of a progressive kind. (2) The cause of this is frequently obscure, but it is frequently accompanied, or preceded, by anæmia and a generally weak and low state of health. Congenital weaklings are often sufferers from this complaint, but it may also arise from excessive nervousness, improper feeding, or impurities affecting the head or nervous system. (3) The change in the colour of the beak before the end was merely a symptom of venous congestion, probably showing a weakening action of the heart, though it may also have been due to some obstruction in the circulation preventing it performing its work properly. These are the things which only a post-mortem could really clear up. (4) Judging from the description you give of its condition, it is very doubtful if the bird would have recovered under any treatment at all. The best you could have done was to keep it quite on the warm side; give sufficient green salad or a saline aperient to keep the bowels acting freely without undue looseness, and add a tonic, such as Chemical Food, to the water occasionally, and generally aim at building up the general health. Your feeding seems to have been fairly good, but you might have tried adding two drops of cod liver oil emulsion to the bread and milk each time you gave it. But on the whole, very little indeed could be done for such a case.

ACCOMMODATION, ETC.

S. J. S.—(1) The aviary, 8ft. square and 8ft. high, will very comfortably accommodate all the birds you have—two cocks and four hens—but although you would undoubtedly stand a chance of getting a brood or two of young Mules by allowing the cock Goldfinch to share the aviary with the Canaries, you would probably be far safer in getting decent results by omitting him altogether and devoting your attention entirely to the Canaries. The cock Canary and four hens should do very well in such an aviary, but the Goldfinch may easily prove the disturbing element which would spoil all your plans. Fix up about eight nests for the four hens. (2) With a group of birds flying loose in an aviary for breeding, it is impossible to so control the supply of egg food that only those birds having young to feed can partake of it. You can only give a moderate supply twice, or better still, three times daily, and trust to luck. Fortunately, with birds flying loose in a space like this aviary, where they have plenty of vigorous exercise, a little extra feeding is of little importance and is not likely to have the same ill-effects as in the case of closely confined birds, so when there are young in the nests you may still follow the usual method of giving just about sufficient soft food each time, as they are found to quite clear up by the time the next supply is due, whether you give it two or three times a day.

EGG AND COLOUR.

F. W. M.—(1) You wish to know if yolk of new-laid eggs will keep fresh enough to feed young for three days. If you mean after the egg is boiled and the food prepared, the answer is most emphatically "No." It is, in fact, not without risk to prepare sufficient food to last the entire day when the weather gets mild and settled. The best economy you can make in this direction is to make a single egg last two days if you have only a very few birds to cater for, by boiling the egg as usual, then allowing it to become cold, and slightly cracking the shell and removing a narrow strip all round the centre, so that the blade of a table knife will pass through the middle of the egg, making a clean cut. Cut through in this way, and use the one part, leaving the other part in the shell, turning the cut side downwards on a clean saucer and covering all over with meal, such as oatmeal, and use this next day. Keep it in a cool, dry place, and it will remain quite fresh under these conditions; but it is essential that the cut surface be completely protected from exposure to the air. (2) No colour feeding does not injure the birds' constitutions in the least if it is properly carried out according to modern methods. With some breeds it is essential for success on the show bench, and where it is not essential it is entirely a matter of individual taste and discretion. As a rule, in popular opinion the colour-fed bird gains an advantage over the natural colour one. (3) The food you name is a good one and has been used successfully in the manner you indicate.

BRITISH BIRDS, MULES AND HYBRIDS

Answered by H. NORMAN.

CAGE FOR SKYLARK.

Thos. Conneily.—I am very doubtful if you will be able to purchase a cage exactly like the one you mention. It is an improvement on the ordinary bow-fronted cage, which latter can be bought anywhere. Failing this, I would advise you to get a Lark's runner cage, or you could possibly make one yourself. My own is 18 inches long, 11 inches high, and 8 inches from back to front, and has a raised platform at one end and a rather long narrow door opposite it, so that a turf can be easily put in. You should be able to buy bird sand at any of the dealers in your town, or possibly you could get half a bushel or so from a builder or builder's merchant. They frequently have a good sharp sand, which does admirably for covering the floor of cages. You can only tame your bird by gently handling the cage and placing him in such a position that he can see people about, and whenever you go near the cage speak to him and give him a mealworm or some tit-bit he is particularly fond of. If he is a freshly-caught specimen he would no doubt be somewhat unsteady, but will probably settle down for good after the moult.

MANAGEMENT OF AVIARY.

Pompey.—Your suggested aviary should do admirably for British and Canaries, and you should be able to breed Mules in it with ordinary good luck. (1) The rough cages you mention should only be small ones, suitable for the birds to nest in. In addition to these you should fix up pans and nest-boxes. Have many more nests than birds, so as to allow a good choice, or they will probably quarrel. The common box tree makes capital shelter, or you can get bundles of furze or heather and fasten them roughly on the sides of the aviary by means of lengths of wire or wire netting. (2) The Goldfinch and Linnet would do, but the Bullfinch cock is only a doubtful breeder. Try a Siskin or Greenfinch. With these you could turn in half-a-dozen hen Canaries and a Bullfinch hen if you can get one. (3) When a hen sits, see that her nest is securely fixed, and then let her come off when she likes. Let her have the freedom of the aviary. (4) You can use Yorkshires if you like, but Norwich hens produce the most shapely Mules and the best in colour. (5) You can catch any given bird quite easily with a small net on a short stick. A stout butterfly net answers the purpose.

ANOTHER UNSTEADY BULLFINCH.

M. Tracy.—Please read the replies to others in this issue. You must not expect a freshly-caught bird to be tame at once. He has to settle down and get used to his surroundings and his owner. Some birds come to hand at once, while others require care and attention for some time. Treat him gently and try to remember he is still a wild bird, and do not frighten him.

GROWTH ON HEAD OF BULLFINCH.

A. E. Hayward.—As the trouble you write about at the base of the beak on your Bullfinch is only just appearing, you can treat it by applying a little iodine. Do it carefully by means of a small paint brush; repeat a few days later, but not too often, as it causes the surface to crack. Should the growth still continue to increase, your remedy is to have it removed by a surgical operation. This, if carefully performed, usually effects a cure. Give the bird a good supply of wild food and fruit during the summer months.

SEXING GOLDIES AND LINNETS.

G. Marsh.—The sexing of Goldfinches and Linnets to one unused to birds is not by any means a simple matter. Even old experienced hands make mistakes sometimes; therefore you can understand that is not easy to explain the differences in the sexes. The cock Goldie, as a rule, has a snaky head, with a rather long tapering beak, somewhat stouter than the hen's at the base. He is bright, with smart carriage. The blaze is, as a rule, more expansive in the cock than in the hen, running well past the eye at the top. His wing butts are a pure black or have a greenish tinge. The head of the hen is usually smaller and rounder, the blaze not so large; the wing butts are not so pure in colour, and she is generally a shade smaller. As regards Linnets, you should have no trouble at this time of the year. A cock bird is mottled on the breast, and if you handle him and turn up the breast feathers with the finger or a lead pencil, you will see they are a dull red, and as the bird comes into condition this will begin to show on the surface. If you open the wings you will see the cock bird has more white on the primary feathers, and it runs right up the quill.

TAMING A BULLFINCH.

Foolish.—As a rule the Bullfinch is one of the easiest birds to get steady. Yours is no doubt a freshly-caught specimen, and I would therefore advise you to place him in a quiet corner of the birdroom—one a little removed from the light—and do not interfere with him in any way excepting to give him fresh food and water, and, of course, to clean out the cage. This is best done by running him into a spare cage by placing the open doors opposite each other and running him back again when his cage is ready. Do not trouble about his bath just yet; wait until he has somewhat settled down. Should he be very dirty, you could gently spray him while in the spare cage. When he has got used to you, you could occasionally pick the cage up and talk to him, and give him one or two extra sunflower seeds or anything he is particularly fond of. A little patience and perseverance will do wonders in taming birds.

BREEDING GOLDFINCH MULES.

Cymro.—All your Goldfinches should breed this season if they are healthy and on song. You should place the birds now in the breeding cages—the hen in one compartment and the Finch in the other—and occasionally you can pull the slide and let them fly together for an hour or so. When the hen is seen to carry anything about as though she is inclined to build, you could then put them together permanently and give them a nest pan, some moss and cowhair. As a rule, a Finch is not quite fit for breeding until his beak is clear; that is, with no dark mark on the upper mandible. Should a hen be ready before the Finch, you had better run a cock Canary with her for the first nest, and use the Finch for the second.

FOREIGN BIRDS.

Answered by WESLEY T. PAGE, F.Z.S.

IDENTIFICATION OF PARROT.

Nox.—(1) It is the Roseate Cockatoo, also known as the Rose-breasted and Galah. (2) The majority of this species do not talk much, but I have come across several which have been really talented talkers. Unless it is an old bird, if you talk to it while attending to its wants, and generally pet it, it should ultimately talk at any rate a little, not only what you teach, but also pick up words and sentences which it hears spoken; also mimic any cries and calls it hears. (3) The proper diet is seed mixture, ripe fruit, nuts, and such extras as biscuits, stale crusts, plain cake, and raw carrot. Cuttlebone and Parrot grit should be continuously in the cage, also a chunk of wood for it to exercise its mandibles upon. Do not give table scraps or any sops and messes. (4) It is the most freely imported of all the Cockatoos, and usually to be obtained quite cheaply as a new arrival, but, of course, an acclimatised and talking specimen might be worth several pounds. They are very hardy, should have plenty of light and air, but it, as well as any other species of bird, must be kept out of draughts.

THE NESTING OF WEAVERS.

P., Alra.—(1) Until recent years very few Weavers have been bred in captivity, but during the last few years several species of Weavers and Whydahs have been bred in naturally planted garden aviaries. They build their own nests, suspending them from some twiggy branch, using hay and long fresh grass. (2) When feeding young they take heartily of live insects, and you should supply meal-worms, gentles, live ants' eggs, wasps' grubs, and any smooth caterpillars, spiders, etc., you can capture for them. Insectile mixture (soft food) of any good make should also be supplied. (3) The Madagascar has not yet been bred in captivity, but there is no reason why it should not do so. The Napoleon Weaver has certainly bred in four aviaries during the past two seasons.

PARROT LOSING ITS FEATHERS.

F. Hill.—Apparently there is not much wrong with your bird. Add to its dietary ripe fruit, nuts, bits, crusts, raw carrot, plain cake. Keep cuttlebone and grit in the cage, also a chunk of wood for it to exercise its mandibles upon. It will benefit the bird if you can get it to take it, to give it a piece of slightly damped biscuit, lightly dusted with flowers of sulphur. Every fourth day put one teaspoonful of fluid magnesia in the drinking water, and on the intervening days lightly colour the water with chemical food. It should be sprayed twice weekly with a tepid weak solution of water and quassia essence. You would find our Nutshell, "The Grey Parrot," 2½d., post free, from our manager, of much assistance to you in treating your bird.

FREE BREEDERS IN CAGES.

A. L.—Very few species of wild birds, be they British or Foreign, are free breeders in cages; certainly there are none which breed more freely than the domesticated Canary. You cannot put wild species up in a cage and expect them to breed as you do Canaries; if you do you are likely to be grievously disappointed, and all the instances of isolated successes do not alter this fact. Moreover, wild species, either Foreign or British, need a more roomy cage than is usually given to a Canary. A good size as a minimum is 30ins. long, 15ins. deep, and 18ins. high, with a nest-box or husk at one end screened by a twiggy branch. The two species most freely bred in cages are Zebra Finches and Budgerigars. Cuttlefishes also go to nest very freely, but do not always rear their young. They do not go to nest, however, with the same precision as Canaries, and take longer to settle down, but the nesting season is longer for them, and there is no occasion to give up hope of the nesting till September is well in. If they do not nest the first season, success with them in the following one should be very probable.

AMAZON WITH DISCOLOURED PLUMAGE.

A. C. Pearson.—I am of the opinion that the discolouration is only a temporary one, and that things will become normal at the next moult. Keep its bowels moving quite freely by giving one teaspoonful of fluid magnesia in the drinking water once or twice daily. As regards its diet, seed mixture is the staple item, but ripe fruit, nuts and carrot, dry crusts and plain cake can be offered at intervals as extras, to vary the diet. Cuttlebone and grit must be continually in the cage, also a chunk of wood for mandible exercise. A glass or crock drinker is the best to use, and you can purchase these at most bird-shops, of a shape and size to stand inside the tin hoppers of a Parrot cage. If it will take it, a piece of bread, biscuit or plain cake lightly spread with cod liver oil emulsion, daily, will be very beneficial. If the bird does not bathe it should be sprayed twice weekly, using tepid water and a little Condy's Fluid, and keeping the bird carefully out of reach of chill winds and draughts till the plumage is dry. Report progress in a few weeks' time.

BREEDING ZEBRA FINCHES IN CAGE.

Esperance.—I suspected egg-binding. The best cure for this is to keep the birds as warm as you can till the chill winds have passed, as Zebra Finches are rather subject to this annoying trouble in chill, cold spring. If your bird is similarly affected again put it in a small cage on a piece of flannel and put the cage over the kitchen range; any heat that does not scorch the cage will not be too great for the bird, leaving her there till she has voided the egg, and then gradually cool her off and return to the cage. There is no reason why you should not attempt to pull off a brood before putting them out, and in case of success you must defer turning them out till the young are able to fend for themselves. Till the clutch of eggs are laid keep watch on your birds daily, without undue disturbance, of course, so that if anything goes wrong with the hen you may discover it before it is too late. The stimulant of weak brandy or whisky and water (warm) is very good in such cases, and dry heat will usually effect the cure if discovered in time, but, of course, a bird that has been almost baked must not be returned to cold quarters immediately: it must be done gradually—the gardener calls it "hardening off" with his plants before planting them outside.

POST MORTEMS.

Mr. G. Yates, M.R.C.V.S., 1, College Road, Harrow, Middlesex, will examine and report upon dead cage birds for a fee of 1s. 6d. each bird; for reply direct, 2s. 6d.; analysis, 21s. The Post Office regulation is that bodies of birds must be sent at the letter rate of postage, and must be packed in hermetically sealed receptacles which must themselves be enclosed in strong wooden, leather, or metal cases. If this regulation be infringed the packets may be destroyed by the authorities. **Any bodies sent to the office of this paper will be thrown away, and if a fee is enclosed the loss will be the sender's.**

GENERAL.

Answered by THE EDITOR.

OBTAINING BIRDS IN THE CLOSE SEASON.

C. Smith.—It is no offence against the law to buy or sell birds during the close season, providing that the birds are not "recently taken" within the meaning of the Act. It has been held in the High Courts that if the owner of birds can prove that they have been in captivity for a fortnight or more they cannot be said to be "recently taken." As you need do therefore is to get a guarantee from the seller to this effect, and the responsibility will be upon him to prove it if any action is taken.

BOOK ON NESTS AND EGGS.

Linnet.—There are many good books on the nests and eggs of British birds, but what is the "best" depends on your own point of view and whether you are prepared to pay a good price for a good book. A very nice book, with coloured pictures of eggs, is Finn's "Eggs and Nests of British Birds," Our Manager would send you a copy of this for 5s. 4d. post free. Two other very fine works are advertised on page 191 of this week's CAGE BIRDS. The prices of these are 6s. 5d. and 15s. 3d. respectively, and you may see full particulars in the advt. You would not be able to get a very cheap work that would be perfectly reliable.

(Advertisements continued from page 182.)

WE ARE WANTING

Norwich and Yorkshires from 13/- pair
Good Odd Hens (any quantities) from 3/6 each

BRITAIN'S BIRDS AND THEIR NESTS.

Described by A. LANDSBOROUGH THOMPSON,

With Introduction by Professor J. ARTHUR THOMPSON.

Contains 132 Coloured Illustrations by GEORGE RANKIN.

15/- net; per post 15/8.

"A magnificent bird-book; one of the finest productions of its kind."—"Morning Leader."
"Admirable coloured plates. The birds are accurate, life-like, and effective."—"Times."
"The plates will undoubtedly ensure for the book much popularity. They are most interesting to the student of Nature, and they will also be very helpful to the young ornithologist feeling his way towards a more mature knowledge of the bird world. The letterpress is as interesting and as well-informed as the plates are accurate and beautiful. The volume is a book of rare excellence."—"Scotsman."
"A book of reference humanised by excursions into vivid descriptions of actual hunts after birds, the Golden Plover, for example. The coloured illustrations are beautiful."—"Evening Standard."

BRITISH BIRDS AND THEIR EGGS.

With a New Method of Indentification. 6/- net; per post, 6/5.

By J. MACLAIR BORASTON (Member of the British Ornithologists' Union.)

Contains 136 Coloured Illustrations.

The study of natural history, and especially of bird life, is now the healthy hobby and pastime of many amongst old and young alike. Mr. Boraston writes for the beginner, his aim being to give to those seeing birds for the first time the simplest means of identification. He considers that this object is best attained by describing the most obvious characteristics of the birds—viz., their broad distinctions of colour and markings, gestures and notes. The birds are therefore shown here as they present themselves to the eye of the beholder, and their scientific grouping is given in a list at the end.
"Mr. Boraston is a naturalist who can write and bring into his book something of the woodland magic of the heart-beats and true surprises of the bird lover."—"Saturday Review."
"Mr. Boraston has a grace of style not often given to naturalists."—"Times."

W. & R. CHAMBERS, Ltd., 38, Soho Square, London, W. and 339, High Street, Edinburgh.

WOOD, Medical Specialists, 20, Louis St., Leeds.

SUFFERING WOMEN

To prove the superiority of Zedex, prepared in dainty, tasteless tablets) over all other remedies, I will send a

1 3 BOTTLE FREE.

together with interesting book full of information on Zedex, and explanatory treatise by Dr. Andrew Wilson. Send three stamps to cover carriage and packing. Obtainable from all Boots' Branches at 5/- per package. Advice Free.—MANAGERESS, ZEDEX CO., Hove, Sussex. Mention paper.

A POST CARD ONLY You cannot hold your own in life's battle if weak, worn, or easily jaded. Periodical attacks of moodiness, languor, despondency, depression, and groundless fears mean nerve troubles and lead to brain fag, impaired memory, and unfits one for study, business or pleasure. The chosen ones in every walk of life are the alert, the bright, and the intelligent, nature's natural gift, but marred for lack of a little knowledge. A post card to the Useful Knowledge Publishers, P.O. Box 94, Bradford, will put you in possession of a 48-page book, neatly bound, of valuable information, and will be sent post paid free of any charge whatsoever if you will mention CAGE BIRDS. A little knowledge saves much medicine. [Copyright.

BOOKS ARE STAR SHELLS

THAT LIGHT THE WAY TO SUCCESS.

Our Handbooks Help Novice and Expert Alike.

CANARY BREEDING FOR BEGINNERS. By CLAUDE ST. JOHN.—An exceptionally helpful, intensely practical and instructive handbook for beginners and tyros at Canary Breeding. It contains 116 pages 7in. by 5in., and is profusely illustrated and contains innumerable hints helpful to all young bird-keepers. In this book the reader is instructed how to pair up the stock birds, how to cage and feed them, how to test the eggs, what to do when the young birds are hatched, and so on until the birds are old enough to be put on the show bench. It is interesting from cover to cover, and is by far the best 6d. handbook on the subject ever published. Price 6d., post free 7d. Cloth bound, 1/2.

AVIARIES, BIRD-ROOMS AND CAGES: THEIR CONSTRUCTION AND FURNISHING.—A practical, up-to-date guide on this most interesting subject; written and illustrated by "Cage Birds" artist-in-chief, Mr. H. NORMAN. It is fully illustrated with ten full-page photographic plates and numerous helpful sketches. Bound in cloth Gilt, price 2/-, post free 2/3; paper board covers 1/6, post free 1/8.

BRITISH BIRD MANUAL. By H. NORMAN.—Published in two parts—"Hardbills" and "Softbills." This latest and most up-to-date manual on British birds has been written and illustrated in colours, and black and white, by "Cage Birds" artist-in-chief, Mr. H. NORMAN. The author, who has made a life-study of the subject, gives in these volumes information and hints of the utmost value to all keepers of British birds. Part I., "Hardbills," deals with the Finches, their keeping, feeding, showing, etc.; and Part II., "Softbills," Blackbirds, Thrushes, Larks, Buntings, etc. Price 1/- per part, post free 1/1.

FOREIGN BIRDS FOR BEGINNERS. By WESLEY T. PAGE, F.Z.S., etc.—A most useful manual for all keepers of Foreign birds. It will be found indispensable information of an entirely practical nature—by a life-long specialist—on the keeping and feeding of the more common and popular varieties of foreigners. It contains illustrations in colour, and black and white, of some of the well-known species, and should be purchased without delay by all fanciers who go in for this most interesting branch of bird-keeping. Price 1/-, post free 1/1½d.

HOUSE'S CANARY MANUAL. By C. A. HOUSE.—5th Edition. A thoroughly practical guide to the general management and breeding of Canaries, dealing fully with the breeding, etc., of every member of the Canary family, including the Roller (or Singing Canary). An illustration of each bird, by the master Canary artist, Mr. H. Norman; exhaustive chapters on aviaries and cages, breeding procedure, moulting, exhibiting, diseases, and seeds—a compendium of knowledge. Price 1/-, post free 1/2. Cloth bound, 2/2.

THE SECRETS OF HYBRID BREEDING REVEALED AND EXPLAINED. By many notable Mule and Hybrid Breeders. Among the contributors are such well-known breeders as Messrs. R. Colton, W. H. Vale, C. Houlton, C. J. Ward, J. Beswick, G. Lander, T. H. Kinch, T. Smith, etc. This Handbook, which contains 212 pages, 7in. by 5in., is brimful of the most practical information on the highly interesting subject of Hybrid breeding. Being written by successful breeders, it is quite invaluable to everyone who would also be successful in his hobby. Price 1/-, post free 1/2.

THE STOCK BOOK, OUR INVALUABLE BREEDING ROOM REGISTER. Compiled by C. E. WESTON. The stock book which makes bird breeding easy. The book no breeder of birds can really afford to be without. Everything that a cage bird breeder needs to assist him in keeping his accounts is found in its pages. A large number of emergency hints are also given for the assistance of the fancier during the breeding season. Price 6d., post free 7d.

NORWICH CANARIES. By C. A. HOUSE.—The latest and most practical manual on this popular variety of Canaries. It tells the fancier all that he needs to know to enable him to become successful as a breeder and exhibitor of the Norwich Plainhead. The chapters on "Forming a Stud," and "How to Produce the Ideal," are worth the cost of the whole book many times over. Price 1/-, post free 1/1.

PET RABBITS, CAVIES AND MICE. By GEORGE GARDNER.—A complete and practical guide to the proper management of Rabbits, Cavies, and Mice. The information given in this handbook is thoroughly up-to-date, and deals with the housing, feeding, exhibiting, etc., of these popular pets. Many illustrations of champion rabbits, etc. Price 1/-, post free 1/1½d.

SEEDS, FOODS, AND WILD PLANTS FOR CAGE BIRDS. By various Leading Authorities. A comprehensive and complete manual on this most interesting subject. In it will be found information on the various seeds suitable for all varieties of cage birds, their food values, uses, etc. Descriptions and illustrations of the various wild plants that are indispensable to the successful keeping of all cage birds are fully given. Price 1/-, post free 1/2.

SEPTIC FEVER OR CANARY PLAGUE. By R. H. CLARKE, M.D., M.A.—A very useful booklet on this subject, which should be found in every bird lover's library. Dr. Clarke has given the subject of his book very special study. Price 6d., post free 7d.

Other Books obtainable from us—

"THE SMALL GARDEN." The Book of the Moment. How best to utilise small space, simple but complete instructions for the novice gardener, especially for the amateur who wishes to turn a little plot of land to good advantage. List of vegetables and flowers. A most valuable little book for all who wish to grow their own food. Price, 7d., post free.

"EVERY WOMAN'S BOOK OF POULTRY." By the Hon. Mrs. Lionel Guest. Most favourably-reviewed book of poultry for the season. The problem of the food supply is a great and growing one. The author writes delightfully and instructively on a subject of which she has made herself a perfect mistress, and the result is a book that can be cordially recommended to every woman who can and ought to take up the industry. Price, 8d., post free.

WINNING BRITISH BIRDS AT A WELSH SHOW.

The two fine examples of British birds shown in our picture were both prize-winners at Llanelly Show. The Chaffinch at the top won 1st Prize for Mr. J. W. Ford, Swansea, and the Yellowhammer took 3rd Prize for Mr. T. J. Gregory, senr., Llanelly.

F. CARL, Publisher, 154, Fleet Street, London, E.C., 4.

Advertisement Charges.

One Halfpenny for each word up to 48, 1d. per word afterwards. Name and address to be reckoned. Minimum, 12 words 6d.

IMPORTANT NOTE.—Two or more Advertisements coming from the same advertiser, even if sent in different names, are reckoned together, and are charged at two words a penny up to 48 words; after that 1d. per word. No single advertisement, even if accompanied by others, will be charged at less than the minimum price, viz., Sixpence.

Headlines or Footlines, 9d. 1/-, 1/6, 2/-, 2/6, according to size.

The rate for displayed advertisements is 7/6 per inch. Rates for a series on application.

ADVERTISEMENTS UNACCOMPANIED BY CORRECT REMITTANCE WILL NOT BE INSERTED.

Postal Orders must be sent as far as possible. All moneys should be made payable to F. CARL.

The Proprietor reserves the right to refuse any advertisement, or to cancel any advertisement ordered for a series, at any time, without assigning any reason for so doing.

Advertisements must in all cases bear the bonafide name and address of the advertiser, and no advertisement will be inserted if addressed to a receiving office, or similar place of call.

Advertisements close Tuesdays first post in each week, and should be sent to the Advertisement Manager, CAGE BIRDS, 154, Fleet Street, London, E.C.4. Terms for Display Advertisements on application.

ALWAYS USE "CAGE BIRDS" DEPOSIT SYSTEM.

We are not responsible for the statements made in advertisements, nor of the *bona-fides* of either buyers or sellers in all transactions the adoption of our Deposit System should be insisted upon

RULES.

1.—PROCEDURE.—The intending purchaser should send to this office the amount of the purchase (our deposit fee included), and at the same time he should communicate with the seller stating what it is he requires sent on approval. We acknowledge receipt of the deposit to both parties. In all cases the depositor should give his name and address, and also that of the vendor, and must write same clearly and distinctly.

2.—END OF TRANSACTION.—The deposit is retained by us until we hear from both parties that the transaction has been completed. If a sale has been effected, we hand the amount deposited to the seller. If a sale has not been effected, we return the amount to the depositor. The transaction must be conducted by the parties themselves. We merely hold the deposit.

3.—AMOUNT OF COMMISSION.—The fee is 6d. for each £1, or fraction of £1, and it must be sent at same time as the deposit.

4.—IMPORTANT POINTS.—The depositor must decide within forty-eight hours of the receipt of the goods whether he will keep or return the same, unless, that is, some other period of approval (of which we must be advised) is agreed upon by both parties. The depositor must at the same time notify us of the fact that he has returned the goods. If the goods are not returned within the said forty-eight hours, we reserve the right to send the deposit to the seller after the expiration of that period. And should the seller fail within three days to notify us of the receipt of his goods back again, the transaction will be treated as ended, and the deposit will be returned to the depositor.

5.—A SATISFACTORY PURCHASE.—When a transaction has been completed to the satisfaction of both depositor and seller, both parties must at once return the deposit receipts as a guarantee of its completion. The depositor must at the same time instruct us to pay over the deposit to the seller.

6.—GOODS ALREADY SOLD.—If the goods are sold before our deposit note reaches the seller, or if for any other reason he declines to do business, he must at once return the deposit note to us. Failing its receipt, we reserve the right to return the deposit to the sender after the expiration of three days.

7.—FRESH TRANSACTION.—In case no sale be effected, a deposit is available for purposes of a fresh transaction, provided another deposit fee be paid.

8.—GOODS IN TRANSIT.—Goods in transit are at the seller's risk, and any damage or loss sustained on the journey must be borne by the seller. But goods not approved of must be properly packed and returned by the same means as were used in sending the same.

9.—PAYMENT OF CARRIAGE.—The payment of carriage must be a matter for arrangement between the vendor and depositor We do not undertake to settle disputes affecting questions of carriage. But in the absence of other arrangements the purchaser is liable for the carriage of the goods, and if the goods are sent on approval and returned, each party pays the carriage one way.

10.—DISPUTES.—In case of a dispute, the decision of the Editor is final.

IMPORTANT.

SEND THE FULL COMMISSION.—If the full commission does not accompany the deposit, the vendor will not be notified of its receipt until the amount deficient plus the extra postage incurred has been paid to us.

HOW TO REMIT.—Under no circumstances will Cheques or Post-dated Money Orders be accepted as deposits. Uncrossed Postal Orders must be sent and the numbers taken for safety.

Not Singing

If you have any birds you are relying upon for the breeding season that have gone into Soft Moult, we Guarantee you a perfect cure.

DITCHFIELD'S TONIC DROPS

are a certain cure for loss of voice, soft moult, slow moult, going light, feather plucking, and inflammation of the bowels.

DITCHFIELD'S FAMOUS REVIVO

is absolutely unequalled for giving new life and vigour to the birds, and for producing that smart tight appearance of the plumage so much desired by all fanciers.

These two Medicines, given on alternate days, will bring any bird into breeding condition.

DITCHFIELD'S SPECIAL LUNG TONIC

the grandest medicines ever introduced for chest and lung affections in cage birds. Can be given with absolute confidence to the most weak or delicate birds. All medicines can be given in the drinking water, and the birds take them freely, with marvellous results.

All the above remedies are sold in 8d., 1/2, and 2/2 bottles; two 8d. bottles for 1/2, two 1/2 bottles for 1/11, or three for 2/8. P.S.—The 1/2 bottles are treble the 8d. size. All orders sent per return, post free.

A Few Words with a Great Meaning.

Plymouth, March 29th, 1917.

Many thanks for bird, which arrived safely. Am very pleased with my first transaction with you. I have got my money's worth.—L. H. BENNETT.

IT IS NOT

the price you pay. You may go in for the very highest-priced birds you see offered, or you may go for the lowest. But the main point that every intending purchaser looking through these columns ask is the same, namely,

WHERE CAN I GET WHAT I REQUIRE?
WHERE, TOO, CAN I GET THE BEST VALUE FOR MY MONEY?

These questions can be satisfactorily answered by stating your requirements, accompanied by a stamped envelope, or by sending your address for my

FREE ILLUSTRATED LIST,

before deciding upon your purchase. It will only cost you a postcard, so you cannot be much out of pocket. But, by MY VALUE, you can, if you choose, save much.

W. RUDD, SPECIALIST, NORWICH.

Greens.

NORWICH grass green buff cock, 40/-; approval: Haney, 19, Oliver-st., Mexboro'. (903)

NORWICH Greens, yellows and buffs, from 10/- each; approval: Jenkins, 82, Church-st., Widnes. (786)

KNOWLEDGE IS POWER.

You can get it in 6d. Vols.

READERS of "Cage Birds" can to-day secure at pre-war prices volumes of the well-known **"Everybody's" Series.** Each volume is, on its particular subject, the handiest and best book obainable. Although small enough to fit one's pocket, each book is packed with a vast amount of valuable information. Consider the wonderful price—only **6d.** each (8d. post free), strongly bound in cloth; in attractive leather binding, **1s.** each (1/2d. post free). The number of these books is very limited, and owing to the enormous increase in the cost of printing and paper, it will be impossible to reprint them at present prices. There are sure to be some of these books that YOU need—some that will give you just the information you have been seeking on some knotty point. Send in your order **NOW.** It is only necessary to state the *Number* of each book as given opposite the name in the list shown here.

1. Everybody's Guide to Poultry-keeping.

EASTER HOLIDAYS.

Special Invitation to Fanciers.

I shall be at home during the Easter Holidays, and I offer an open invitation to all fanciers to come and inspect my rooms and stock. Whether you wish to make a purchase or not makes no difference. My rooms will be open, and if you are interested in birds come and have a look round. If you should require one or more birds, I have a splendid collection of stock birds, exhibition birds, and songsters, and I invite you to come and make your own selection.

If you cannot come, however, **remember I will gladly send one or more birds to any address in the United Kingdom on 7 days' approval at my sole risk.** If not satisfactory in every way the birds can be returned, and I will return cash in full; or, if preferred, other birds will be sent for approval. Is it possible to make a fairer offer?

I am now offering a limited number of grand stock and exhibition birds, either Yorkshires or Norwich, which I can guarantee as bred from my own **Bulldog Strain,** at 20/-, 25/-, 30/-, 40/-, 50/- each, cocks or hens. Also a few grand matched pairs at 40/-, 45/-, 50/-, 60/- per pair upwards. These are splendid value, and have only to be seen to be appreciated.

I have also a grand selection of stock birds from other well known strains, as follows:—

YORKSHIRE COCKS, grand lengthy birds, in full song, 15/-, 17/6, 20/-, 25/-, 30/- each, upward.
YORKSHIRE HENS, smart, racy, typical hens, 7/6, 10/-, 12/6, 15/-, 20/- each, upwards.
MATCHED PAIRS, 25/-, 30/-, 40/-, 50/-, 60/- per pair upwards.
NORWICH PLAINHEADS. Grand, thickset, cobby birds at same prices as Yorkshires.
BORDER FANCIES, Real good birds, both for stock and exhibition. **Cocks,** 15/-, 20/-, 25/-, 30/- each. **Hens,** 7/6, 8/6, 10/- each. **Matched Pairs,** 17/6, 20/-, 25/-, 30/-, 40/- per pair.
CRESTS AND CREST-BREDS.—A few real good pairs at 30/-, 40/-, 60/-, 60/- per pair. Odd Birds, Cocks or Hens at proportionate prices. **Matched Pairs** for **Mule** or **Hybrid Breeding,** 15/- pair.

ROLLERS. ROLLERS. ROLLERS.

I have a magnificent collection of pure British Rollers from the best and purest strains, at following prices:—

HIGHLY TRAINED COCKS, 25/-, 30/-, 40/- each.
PURE-BRED HENS, 7/6, 8/6, 10/- each.
MATCHED FAIRS, 25/-, 30/-, 35/-, 40/-, 50/- per pair.
Travelling Cages, 4d. extra in all cases.

One word more—**Please remember, I invite you** to come on any day but Sunday, and make your own selection, but if you cannot come, **Don't Forget** that I send every bird on 7 days' approval, at my sole risk. I personally select every bird that is sent away. I have a very large stock of birds in my rooms at the present time to select from, and I guarantee to give absolute satisfaction to every customer or return cash in full. Terms: Cash or deposit with Editor.

Send for 1917 Price List.

If this request is not complied with it is possible that late Advertisements may be held over with consequent disappointment and inconvenience to the sender. Letters should be addressed—154, Fleet Street, E.C. **4**. Any communication not bearing the district number (4) is liable to delay by the Postal Authorities.

Club Reports.

SOUTHERN BORDER F.C.

Meeting, Headquarters, Mar. 26. The question of the Club's patronage for the coming show season was discussed. It was the opinion of most present that whilst it was inadvisable to put the club's cups into competition this year, something should be done to encourage members to support the societies who put on classes for our variety. Various suggestions were put forward, but after considerable discussion it was decided to postpone the meeting to May, and to invite suggestions from the Provincial Committee. No further business being on the agenda the meeting closed with a vote of thanks to the chairman. I hope the Provincial Committee will let me have their suggestions as soon as possible.—Geo. Burton, Hon. Sec.

CHESTER-LE-STREET C.B.S.

Meeting, March 17, with only a moderate attendance. Nevertheless, we got through a good deal of business. Decided that N.F. show be held July 28 and annual show, Dec. 1. Also decided that the annual subscription be 5s. instead of 3s. 6d., as before, this making our subscription the same as other societies in the district. Decided that members must have 3s. 6d. of subs. paid at N.F.S., the rest to be paid on closing day of entries. Also that entry fee at N.F. show be 9d. per cage; 1s. 6d. will be added to the prize money in each class. Decided also to give a special of 2s. 6d. for most points in Canary section, and the same in British (Mules to be included in British section). The schedule for N.F.S. was left over for the next meeting.—R. Ward, Sec.

GLASGOW & W. COUNTIES CLUB

Meeting, March 31, Mr. Jas. Findlay presided over a good attendance. Balance-sheet was read and adopted, showing a credit balance of £6 3s. 6d., which was considered highly satisfactory. New members admitted R. McEwan, R. Cullen. Thereafter table show of British, Messrs. W. Brown, Cambuslang, and A. Macfarlane, Glasgow, judged. Goldf.: 1, sp, 4, Trotter; 2, 5, 6, 7, Pettigrew; 3, sp, Johnstone. Linnet, H.M.: 1, Trotter; 2, sp, 3, Bannerman. Siskin: 1, Trotter; 2, 3, Pettigrew. Linnet, F.M.: 1, Johnstone; 2, 3, Trotter. Members are reminded of special show of Linnets, two classes: H.M. and F.M., April 14, at 7, Classification for show May 5, Headquarters, at 7: Greenf., Twite, Lesser Redpoll, Mealy Redpoll. Members are requested to make these monthly shows a success for up till the present they are deserving of better patronage. Messrs. Findlay, Macfarland and Pettigrew supplied the specials.—J. H. Adam, Hon. Sec.

MIDLAND ROLLER C.C.

Meeting, Mar. 26, Headquarters, "Seven Stars," St. John-st., Wolverhampton, Mr. Willows presiding over a record attendance of over forty members; many new members putting in their appearance for the first time. The change of meeting night having met with approval, 28 new members were enrolled: Messrs. Austin, Garbett, Joy, Norris, Fenton, Morris, Jones, Smith, Cowell, Harris, Nickholds, Mead, Mason, Bayliss, Appleby, Brown, Mason, Harper, Lucas, Pimm, Griffiths, making a total of 55 new members elected this year. A splendid challenge cup was chosen for the novice section to be competed for at our annual show, rules appertaining to same will appear in the new rule book. New schemes were suggested, whereby members, residing in all parts of the country will be able to participate in the management of the society. The sale of rings is very promising, over 1,700 being sold. After business, a very enjoyable time was spent listening to several birds brought by our champion members, the different tours being explained by Mr. A. Harper; his services were much appreciated. Next meeting some more birds will be brought, in conjunction with a paper from Mr. Rhodes, on the general effect of the Roller Canary song.—J. W. Thomson, Sec.

BIRMINGHAM ROLLER C.C.

THE CLUB LEAVES THE FEDERATION.

Meeting Crown Hotel, March 21. Mr. W. Pimm presided over a good attendance. New members elected, Messrs. E. Grove, A. Smith, J. J. Samuels, J. B. Freeman, and W. Brown. Several letters were read with regard to rule 6 of the Federation, and after discussing same the meeting was adjourned until March 28 for further information as to how many shows were to be held in the South next season, the club to take a vote of all members on rule 6, and as to the club remaining in the Federation. Adjourned meeting of March 21 was held at the house of one of our members, Mr. W. Pimm chair, with a good attendance. Letters were read from members that could not attend, and after fully discussing the Birmingham Club's position of remaining in the Federation, it was resolved that the Birmingham Club resign from the Roller Federation; also that we hold two shows next season. Members elected: Messrs. Stephenson, Tatney, Smith, Twigg, Jones, Plant, Rhodes, Humphries, Harper, Williams, Cadman, bringing our membership up to 53. The meeting closed with a vote of thanks to Mr. Laylands, for kindly providing a room for the meeting. I shall be pleased to hear from any intending members before rule book is in print.—W. Taylor, Hon. Sec., Council School, Hospital St., Birmingham.

"Food."

THE GREAT NEW NATIONAL WEEKLY.

A practical journal which shows how to grow our own food.

The profitable rearing of Poultry and animals which help to fill our food bill is dealt with each week, and invaluable advice is given to those who have started to produce home-grown fruit and vegetables.

No one with a garden, large or small, should be without this wonderful penny-worth, and the small holder will find in it a veritable treasury of practical knowledge.

Every Thursday 1d.

Advertisement forms and specimen copy sent post free on application to "Food" Offices,

154, Fleet St., London, E.C., 4.

SCOTTISH ROLLER C.C.

Meeting, Club Rooms, Mar. 28, before a record attendance; Mr. McLean in the chair. A letter was read from Mr. Best on the rules of the Federation. After a little discussion it was decided that we uphold the rules of the Federation. Secretary read letters from two friends asking to be made members of the club. A note was also read from Mr. Best asking the members to give their mind on the song tours. It was left to Mr. Jackson, Mr. McLean, and Mr. Macdonald, to go into it and report. Vote of thanks to the chairman closed the meeting. —J. Jackson, Sec.

YORKSHIRE C.C. OF SCOTLAND.

Annual general meeting, Central Halls, Glasgow, March 3, C. Martin presiding. Balance-sheet for 1916 was adopted, which showed a balance on the right side. Decided that Young Bird classes at patronised shows be left open, and that all young birds competing for club's specials, etc., be rung with closed rings, which must be bought from the secretary, price 1s. 3d. per dozen. Decided to hold F.F. Show in June. Classification: Cl. or Tkd. Yell., Cl. or Tkd. Buff, Variegated Yell. or Buff; entry 6d. per bird. New members elected, P. Corbett, J. Mount, S. Johnstone, W. S. Smith, J. Crawford, J. Whitelaw, and J. Eccleston. New members are now being enrolled; particulars from S. F. Wood, Sec., 4, Tollcross-rd., Parkhead, Glasgow.

QUEEN'S PARK (Glasgow) C.B.S.

Meeting, Y.M.C.A. rooms, March 28, Mr. R. B. Cairns presiding over a good attendance. The following were elected judges for the annual show, Dec. 1: Norwich, Crest, or C.B., Mr. A. Chalmers, Kirkintilloch, and Mr. A. McFarlane, Glasgow; Borders and Yorks., Mr. W. Clark, Irvine; Brit., Mr. H. Jamieson, Glasgow. Mr. Davidson was to have given one of his famous lectures, but unfortunately he was unable to be present, and on the suggestion of the chairman the time was occupied in a friendly discussion on mating, rearing, egg-food, and seeds, which was very interesting and instructive. Hat night next meeting, April 25. A vote of thanks to the chairman brought the meeting to a close.—A. Foreman, Sec.

PROVINCIAL ROLLER C.C.

Meeting, Old Boar's Head, Manchester, March 31. Mr. Thos. Turner presided over a capital attendance. New members elected, Messrs. A. Bowden, N. Dickinson, D. Jones, J. Shaw, F. Marsh, F. Entwistle, and S. Watkins, bringing the membership up to well over 100. Decided to hold annual contest Dec. 7-8, when new rule re challenge comes in force, viz., that each member be allowed to nominate one bird and pay 6d. extra, these to be judged separately, and can be entered in any other class as well. The meeting was unanimous in supporting delegates' decision re Federation Rule 6. A suggested judging standard was drawn up, upon which all members present were given the opportunity to pass an opinion, and vote, this being the Federation method of doing things. Particulars as to membership will be supplied on applying to E. Hibbert, 27, Pendlebury Road, Swinton, Manchester.

ARDWICK & MANCHESTER C.B.A.

The fourth annual social and musical evening was held March 21, at the St. Thomas's Schools, Ardwick; Mr. W. Robinson presided over an attendance of nearly 90 members, wives and friends. An excellent entertainment was provided, and several of the artists who had never previously appeared in public gave a very good account of themselves, rendering some very nice songs. After the first half of the programme was gone through, there was an interval of half-an-hour for refreshments, a light supper being provided, which was very much appreciated by everyone. In the later half of the programme several of the artists had to render encore songs. The artists contributing to the musical part of the evening were: Mr. W. McKail, Mr. Meadowcroft, Mr. and Mrs. Tonge, Miss Oldham, Miss Lloyd; accompanist, Mr. Greenlees. The singing of the National Anthem brought a very enjoyable evening to a close. —J. Spencer.

W. BROMWICH & HANDSWORTH.

Meeting, March 24, Ivy House Hotel, Handsworth, Mr. S. N. Taylor presiding over a good attendance. After general business, which included the election of two new members, and the fixing dates for annual ramble and two N.F. shows, Mr. Jeffreys (Harborne) gave a lecture on "The Feeding of British Finches and Canaries," which proved to be most interesting and instructive, and was much appreciated. The lecturer explained how, in their wild state, the members of the Finch family vary their diet in the different seasons of the year, naming and describing both the seeds and various forms of insect life most favoured by the birds at different periods. Mr. Jeffreys is well known as a breeder of the Nightingale in captivity, and having made a life-long study of the habits of all wild birds, expressed the opinion that Canary fanciers as a body are too conservative in their methods of feeding their pets, and if a more varied diet were adopted, it would in many cases be attended by far greater success. A hearty vote of thanks to the lecturer brought a pleasant evening to a close.—P. T. Cowley, Sec.

DURHAM CITY C.B.S.

Meeting, March 24. Officers elected: Chairman, A. Robson; Sec. and Treas., H. Briggs; Auditors, R. Ward, Thos. Halliday; Committee, R. Ward, W. Forster, J. Briggs, S. Bailes, J. Stewart; T. Halliday, R. Lawson, T. Atkinson, J. Whyatt, R. Blake, J. McNay, J. Gillespie. Show dates: Nest Feather, June 16; annual show, Dec. 29. This concluded the business of the evening, and we commenced the social evening, which was a huge success, and the few members who missed attending missed the treat of the season, as we had more programme than we had time to go through. The following gentlemen kept us happy with songs and music: Messrs. A. Bailes, A. E. Priest, W. Forster, A. Stanger, A. Weire, T. B. Ward, R. Ward, Thos. Rate, and G. Towers. During the evening Mr. Forster made an appeal to the company on behalf of Mr. James Hedley, of Chester-le-Street, who was the founder of the Chester-le-Street C.B.S. He volunteered for the army when the war was only four days old, and after being blown up by a shell he was temporarily discharged last August, and got light employment; but was obliged to give it up owing to his condition. He has a wife and three children, with house rent and coal to find out of a pension of 17s. 6d. per week, so it is easy to see what straits he must be in. Anyone in the district who knows him can say what a fine steady-going man he is, and that it is a very deserving case. The appeal resulted in a collection of 12s. 6d., and this was given to Mr. Forster to hand to Mr. Hedley, with the sympathy of the members of the society. This concluded the business of the evening, which will be a red letter day in the meetings of the society.—H. Briggs.

WELSH C.B.C.

As the annual general meeting will be held shortly, I shall be pleased if any member who has any matter to bring forward will communicate with me at once to enable me to place it upon the agenda. If such is an alteration of rules, the same must be published in the Press at least one calendar month before such meeting, see Rule 11. For election of officers, etc., see Rule 6. I have eight new members to propose, and if there are any further names to submit I shall be pleased to accept names and subscriptions.—D. H. Tedstone, Hon. Sec.

CLUB AND SOCIETY NOTICES.

ONE NOTICE of any forthcoming Society meeting inserted free. It must reach us not later than Tuesday morning's post. Specially printed Club Notice Postcards may be had free on application to our Manager. Secretaries should always use them

NOTE.—Only the details asked for on our cards can be published. Such phrases as "a large attendance desired," etc., must not be included. Lanarkshire B. B., Etc., C.—April 6, Hamilton Town Hall, 6.30. Standard cages will be on view, and adoption of rules.—W. P. Campbell.

Larkhall C.B.A.—April 14, Y.M. Halls, 7. Lecture on Border Fancy Canary, by Dan Hamilton, Hamilton.—A. Thomson.

Leeds C.B.S.—April 7, Griffin Hotel, 7.30. Questions and answers; distribution of 1917 syllabus, etc.—W. A. Wilson.

Leeds Roller C.C.—April 7th, Griffin Hotel, 7.15. Judging competition; judging standard; voting re rule 6, and other business.—H. Best.

Leigh C.B.S.—April 11, Railway Hotel, 7.45.—R. Charleson.

Liverpool B.B.A.—April 12, Oldham Hall, 8. Election of judges for N.F. and annual shows, also classification for young shows.—T. R. Jones.

London and Counties A.C.B.—Owing to holidays there will be no meeting on April 7.—W. Gilbert.

Maesteg C.B.S.—April 14, Bird-in-Hand Hotel, 7.30. General business.—C. Williams.

Middlesbrough and Tees-side C.B.S.—April 7, Crown Hotel, 6. "Question night." Important to the novices.—T. C. Deans.

Nantymoel, Ogmore Vale C.B.S.—April 11, Committee Room, Ogmore Hall, 6. Paper by Mr. W. Whitford, on Canary Breeding and Management.—T. Davies.

National British Bird and Mule Club.—April 12, Ramble to Cobham and Hatchford; returning from Effingham Junction. Train leaves Waterloo 2.50.—T. R. Trower.

N.W. Glasgow C.B.C.—April 10, Unionist Rooms, 308, New City Road, 7.45. Classification for F.F. show, also nomination of judges for F.F. and annual show.—P. Houston.

Oldham C.B.S.—April 10, Volunteer Inn, 7.45. Members kindly note meeting place; business important.—G. Mills.

Openshaw, Gorton C.B.S.—April 11, room back of stage, Alhambra Theatre, Higher Openshaw, 8.30. Selection of judge, first nest, and gen. business.—A. W. Newton.

Penygraig C.B.S.—April 7, Butchers' Arms Hotel, 6.30. Decide date for F.F. show, and nomination of new members.—Wm. Hollinshead.

Plumstead and Woolwich C.B.S.—April 10, Trinity Schools, Beresford Street, Woolwich, 8. Minutes, etc. Lecture on Egg Food, by Mr. Cole, S.N.P.C. Questions on subject answered. Fanciers invited.—G. H. Maclellan.

Pontypool C.B.S.—April 14, headquarters, 6.30. Important to all.—W. D. Lewis.

S. London Col. and F.A.—April 12, Headquarters, Druid's Head, Broadway, Deptford, 7.30. General meeting.—F. Tottie.

Stanley Empire F.F. and C.B.S.—April 8, Club Room, 7.—R. Hutchinson.

Sunderland C.B.A.—April 7, Station Street Cafe, 7.30. Washing exhibition by Mr. J. Riseborough.—F. Riseborough.

Swansea and Dis. C.B.A.—April 7, Elysium, High Street, 8. Table show of British, 3 classes; judge, Mr. W. J. Jenkins.—J. H. Ford.

Vale of Leven C.B.C.—April 10, Victoria School, Alexandria, 8.—G. McCall.

Wakefield O.S.—April 7, Crown and Anchor Hotel, 7.30. Usual business; colour food, etc.—T. H. Alexander.

Walsend, Mid-Tyne C.B.A.—April 11, Station Hotel, 7. Election of judges for N.F.S. and annual show, and other business.—G. Greenwell.

Walton, Everton C.B.S.—April 11, Headquarters Mission Hall, Kilshaw Street, 8. Discussion on Hints for Breeding Season, to be opened by T. Rowlands.—J. Lloyd.

West of Scotland.—April 7, Nelson Temp. Hotel 7.30. Meeting, and lecture by Mr. E. Barron.—W. Hutchison.

Windhill O.S.—April 7, Blue Bell Hotel, 7. Election of Sec.; members' show; specials for show, and other very important business.—R. Garnett.

Wombwell B.F.A.—April 7, Ship Inn, 7. Arrange N.F. show, judge, and date.—F. Moore.

Singing Contests.

Announcements of forthcoming contests in the nature of advertisements must be paid for at advertisement rates, two words a penny.

SHEFFIELD.

Linnet contest, Sportsman Hotel, Paternoster Row, April 1, 24 birds sang: 1, Jackson; 2, 3, Pariett.—Phillipson, Sec.

LEADGATE.

Linnet singing contest, April 7, Victoria Working Men's Club; singing commences at 2, 10s. added to entrance fee (6d. per bird) as prize money; judge, T. Cant; timekeeper, B. Walker.—J. W. Rowell.—(Advt.)

KIPPAX.

Kippax Linnet Club, members' sing, March 31, Commercial Hotel; 39 birds entered: 1, R. Collinson; 2, 3, shared between Collinson and Thomas. Timekeepers, R. Plows and J. Cooper; tappers, W. Perkin and H. Collinson.—R. Plows, Sec

LEIGH.

Globe Inn Linnet Club, open contest, March 31, 42 birds entered, quality: 1, J. Murphy; 2, F. Murphy; 3, J. Statham; 4, Wilson. Time: 1, Alex. Donnelly, 104; 2, F. Murphy, 80; 3, Cowburn, 70; 4, J. Finch, 61; timers: W. Meadows, J. Murphy; judges, J. W. Jones, J. Statham; minutes, J. Whittle. A members' contest will be held April 14, members to be paid up on Friday night, April 13.—R. Disley, Sec.

BARNSLEY.

Dove Inn Linnet Club, Doncaster-rd., April 1; 19 birds entered for four prizes. Shepherd timer, Barnforth chalker: J. Norburn 3min. 56 sec.; Wright 3.26; Jones, 3.14; Hardman 3.6. Mr. D. France wins best average for 13 weeks' singing, doing a grand record time of 44min. 42secs., and winning first prize, value 25s.; 2, J. Norburn, value 15s., 44.13; 3, Hardman, value 10s., 42.11. Members please note over £7 in prizes this Easter to be sung for. Every member gets a prize. First bird in window 1 prompt.—J. Hardman, Sec.

Mr. James Norburn will match his bird to sing any bird in England, Barnsley singing, or sell, £5.—47, Station-rd., Worsbrodale, Nr. Barnsley.—(Advt.)

LEEDS.

West Leeds Linnet and Canary F.A. Linnet contest, Viaduct Hotel, April 1; 20 birds contested. 1, Baldwin; 2, 3, Chadwick. Judges, T. Dobson and T. Kippling, Timekeeper, T. Cawood.—T. Cawood, Sec.

Linnet singing contest for quality, Clarence Hotel, Skinner Lane, April 1; 29 birds sang for four prizes. 1, Binns; 2, Summers; 3, 4, shared between Binns, Wigfield and Bamfield. Judges, T. C. Summers, W. Lipman.—T. O. Summers, Hon. Sec.

CASTLEFORD.

George and Dragon contest: 1, J. Williams; 2, J. Wainwright; 3, C. Shaw. Open contest Easter Monday; good prize money given; first pair in window at 12.45.—J. H. Nicholls.—(Advt.)

Castleford Potteries, Grey Horse Inn, March 17: 24 birds: 1, Williams; 2, Wainwright; 3, Nelson. March 24, 24 birds: 1, Williams; 2, Shaw; 3, Nicholls. March 31, 20 birds: 1, 3, Williams; 2, Clayton. Open contest, April 7, good prize money. 3d. entry, 5s. added; commence at 4.—J. Oliver.—(Advt.)

In the Courts.

A STORY OF LIME, LINNETS, AND A HAWK.

An interesting case under the Wild Birds Protection Act was heard at Doncaster, Mar. 24, when Walter Worrall, miner, was summoned for having a Kestrel Hawk in his possession. It was stated that the police found defendant near the Roman ridge with several cages of decoy birds, and with lines and lime. He also had the Hawk. Defendant told the Court he was training the birds for contest singing when the Hawk swooped down to get one of them, and he knocked it over with a stone. His birds were Brown Linnets, and were kept by people all over the country for contest singing. One of the birds in court was worth a sovereign. The Bench ordered the defendant to pay costs. They allowed him to keep his birds, but ordered him to forfeit his lines and apparatus.

"PIGEONS"

The only paper dealing solely with Show, Table and High-flying Pigeons.

Coloured Plates a Special Feature.

Every Friday 2d. Send P.C. for specimen.

"FUR & FEATHER"

The Rabbit, Cat and Cavy Paper.

The only Paper devoted to these subjects.

Every Friday 1d. Send Postcard for Specimen.

Offices: Idle, Bradford, Yorks

SHOW DATES FIXED.

To secure insertion in this column, a guarantee that the show will be advertised in "C.B." to the extent of at least 30/- must be sent to our manager.

England.

Nov. 1.—Blaenavon C.B.S.—(Geo. Broome, 82, King St.)
Nov. 3-5.—Leicester Hand-in-Hand C.B.S.—(Day and Roberts, 28, Frances St.) J.R., C.H.
Nov. 14.—Coventry O.S.—(J. Kent, 91, Villiers St., Stoke, Coventry.)
Dec. 7-8.—Barrow C.B.A.—(D. McFarlane, 26, Lord Roberts St., Vickerstown, Barrow-in-Furness.) J.R., H.W.B., T.B., J.M.

Wales.

Nov. 15.—Swansea C.B.A.—(J. H. Ford, 83, Norfolk St.) D.J., S.J.N.

CAGE BIRDS, 154, FLEET STREET, LONDON.

Cage Birds
and Bird World.

A Guaranteed Circulation amongst 50,000 readers weekly

Offices: 154, Fleet Street, London, E.C.4. *Telegrams*—"Aviculture, Fleet, London." *Tel. No.* 5229 Holborn.

The Editor *is always glad to receive and consider suitable* contributions, *whether articles, sketches, or photographs. Provided an addressed envelope, sufficiently stamped, accompanies same, every effort will be made to return unaccepted contributions promptly, but he does not in any case hold himself responsible for their safety.*

All matter *intended for publication must be written or typed on* one side *of paper only, and must reach us not later than the first post on Tuesday if insertion in the next issue is desired.*

"CAGE BIRDS" will be sent post free weekly, on the day of publication, at the prepaid rate of 10s. per annum for the United Kingdom, and 13s. annually for foreign countries.

Twitterings.

The judges of the annual show of the Leicester Hand in Hand C.B.S., Nov. 3—5 next are Messrs. J. Robson, Canaries; and C. Houlton the remainder.

By the death of Lord Muncaster, which occurred at Muncaster Castle, Cumberland, on March 30, the nation is the poorer for the loss of a great bird-lover. In his park he maintained a Heronry and a preserve for the Black-headed Gull. The colony of Gulls is said to be the largest in the United Kingdom.

Nantymoel, Ogmore Vale, and District C.B.S., writes Mr. T. Davies, sec., 29, Oakfield Terrace, Nantymoel., has fixed Wednesday, December 5th, 1917, for its first open show; other societies please note to avoid clashing. We have a few district members already, but we would be pleased to have more; district radius, twelve miles.

Mr. F. E. Jeffreys, chairman of the South Wales and Monmouth Federation, writes that the annual general meeting will be held at The Bush Hotel, Swansea, April 9, at 2, when he would be glad to see a delegate from each affiliated society. Points won by affiliated societies should be communicated to the hon. sec. before the meeting, or to Mr. Jeffreys, Norfolk Street, Swansea.

Thanks.

I beg to acknowledge your P.O. for 15s. 4d., for which I am most grateful, writes Mr. R. M. Laughlin, Earlsfield. Also I return my sincere thanks to all the fanciers who subscribed and to you for so very kindly inserting the appeal on my behalf.

God Bless the Printer!

We are sorry that a printer's error in a sub head of the prize letter of last week nullified the whole sense of the advice given in a most useful contribution. The cross head as written was "Lime kills the poison," but an ingenious compositor made this read "Time kills the poison."

Interesting Evenings for Fanciers.

As will be seen by our list of Club Notices in this week's issue, the forthcoming meetings of many societies should be of considerable interest, and as friends are welcome to these meetings fanciers should make a point of attending if possible. Some meetings at which lectures are to be given are Nantymoel C.B.S., Halifax O.S., Larkhall C.B.A., City of Birmingham C.B.S., Crystal Palace and Penge C.B.S., Plumstead and Woolwich C.B.S. and Farnworth C.B.S. Places, dates and times are given in the Club and Society Notices columns. We hope to get most or all of these lectures for publication in the interest of our readers in general.

Pity the Poor Canaries.

According to reports in the daily newspapers, the Duchess of Portland stated at the annual meeting of the Royal Society for the Protection of Birds that she spent her life and money in buying cage birds and setting them at liberty.

Birds on War Rations.

Captain Bathurst, in reply to Lt.-Col. Orde-Powlett, stated in the House of Commons that the waste of food suitable for human consumption by nurses and children who bring half-loaves and slices of bread to feed the birds in the parks is to be deprecated, but it is hoped that the practice may cease without the necessity of issuing an Order.

Eggs—and Eggs.

A contributor to the Glasgow "Daily Record and Daily Mail," in an article entitled "Neglected Sources of Food," says "There are many more birds—Wood Pigeons, Rooks, Jackdaws, and so on—which lay us eggs most agreeable for our eating if we would but make trial of them. Those of the two last named it is likely that we have now and again partaken of unwittingly, figuring under the pseudonym of 'plovers' eggs." We should have thought that the appearance in the "white" of the eggs when cooked would give away any attempt at imposition.

The Cook Gets a Move On.

In a letter by "T. R. G.," the "Yorkshire Post" says that, in order to obtain acorns, Pheasants "will in the autumn desert the stubbles, by travelling some distance away, returning to their roasting (sic) places at or before dusk."

No Returns.

Last week, under the heading, "A Word to the Wise," we forecasted the immediate arrival of the time when our readers would have to order their Cage Birds beforehand to be certain of getting a copy, and we advised them to put the hint into effect by arranging with their newsagents for a regular weekly copy. Now we have to tell them that the time is getting very near when no newspaper will accept returns, and this will mean, of course, that all casual purchase will be stopped. It is a simple matter for any reader of Cage Birds to ask a newsagent to reserve a weekly copy, and we are sure that we have no reader who will omit to do this rather than go without the only paper devoted to the hobby of bird-keeping. It should scarcely be necessary to say that this note is written in the interests of our individual readers, and not in our own, for in present circumstances each copy of our paper costs more than the price at which it is sold, and a decrease in circulation for a time would mean a gain to us, not a loss.

Seasonable Hints on Useful Weeds.

By RICHARD MORSE, F.R.H.S.

A new weekly feature which will be found of the highest value to all who keep seed-eating birds, and of interest also to all who appreciate the beauty and usefulness of the flowers of our waysides and meadows.

The Mistletoe.

ALTHOUGH the mistletoe (Viscum album L.) is inseparably associated with Christmas and its festivities, I feel that many readers may like to have their attention drawn to it at this season of the year, because just now it is bursting into flower, and although in open districts most of the berries will probably by now have disappeared, there still remain in the more sheltered parts a very fair supply.

MISTLETOE IN FLOWER.

The Mistletoe has been familiar to all of us from our earliest days, but only as a gathered plant, for in its wild state it is a comparatively rare species in most parts, though in districts where it does occur, it is often very abundant, and immense masses as much as four feet in diameter may often be seen.

It is not generally known that the mistletoe can be cultivated in one's own garden under certain conditions, though its requirements are different from those of almost any other British plant. It is one of our very few native plants which will not grow in the ground, for, being a parasite of the vegetable world, it is unable to obtain its food directly from the soil, and so is compelled to fix itself permanently upon a host plant, from which it absorbs the necessary elements for its sustenance.

Each of the well-known berries contains a single seed immersed in a very glutinous pulp, and if some of these be stuck upon the under sides of the branches of apple, hawthorn, or certain other trees at this time of the year, they will most probably begin to grow, and their tiny roots will penetrate the tissues of the tree and give rise in course of time to fully mature specimens, so that one may have the pleasure of gathering his supplies of berries in his own garden or orchard.

It should be remembered, however, that a single mistletoe plant is useless as a berry-bearer, for it is one of those peculiar species which produce their male and female flowers on separate plants, and berries, of course, will follow the latter only. The tiny inconspicuous flowers are shown in one of the drawings, and the other sketch illustrates the enlarged flowers of each sex, which are now to be found by all who care to search.

As the berries cling so tenaciously to the plant, they form a valuable winter food for numbers of our native songsters, and have long been held to possess valuable medicinal properties. Blackbirds and Thrushes in particular seem to be especially fond of them, and it is interesting to note that the beautiful Missel Thrush (or Mistletoe Thrush), whose wild and lovely music is now delighting us in these cold and cheerless days, has probably acquired its popular name from its partiality for these fruits.

I find it difficult in notes of this character to avoid occasional digression. There is a charm about wild Nature which we all feel at times, especially in the sweet o' the year, and which I think we ought to welcome and encourage, if only for the sake of helping us to realise what pleasures and happy surprises we can bring to our little feathered musicians from their beloved fields and woodlands at every season of the year. We need not always look for pecuniary advantages to follow our labours for those who do so much to cheer us with their song, but instead we get at least the reward of sharing their pleasures as they welcome each fresh specimen from the open countryside.

1. FEMALE FLOWERS.
2. MALE FLOWERS.
3. FRUIT.

At the time of writing, although the weather has shown occasional glimpses of springtide, a heavy snowstorm has been raging for hours. Wild plant life is therefore remarkably late this year, and the fields and waysides are as unattractive as in mid-winter. However, I took advantage of a sunny spell a few days ago, and was cheered to find the chickweed making good headway in spite of the cold. I therefore propose to deal with this useful plant in my next article.

Readers are invited to send any botanical specimens which they have difficulty in identifying. The whole plant, including fruits, should be sent whenever possible. Packages should be addressed "The Editor, Cage Birds, 154, Fleet Street, London, E.C.4, and must be accompanied by a P.O. for sixpence. Answers will appear in this column.

"British Birds" for April, Messrs. Witherby, High Holborn, 1s. monthly, is especially interesting as recording the appearance for the first time in our country of three birds which are therefore to be added to the "Hand-list of British Birds." These are the Calandra Lark, the Eastern Great Reed Warbler, and the Semi-palmated Ringed Plover. Two specimens of the Calandra Lark were "obtained" (shot) out of a party of five seen at St. Leonards (Sussex), on May 16 17 last. The Reed Warbler was picked up dead under the electric wires, also at St. Leonards, in August last. All three species are described in the issue. The usual "Notes" comprise many interesting records appertaining to British birds.

The opening article in the March issue of the Avicultural Magazine, the journal of the Avicultural Society, is "Whydahs," by Mr. W. Shore Baily, a very interesting contribution, beautifully illustrated by reproductions of photographs by the author. Lady Wm. Cecil writes on the Vireos (or Greenlets) of North America, giving her personal observations of these little-known birds and their nests. M. Jean Delacour contributes an article on the Red-crowned Pigeon, and Mr. F. E. Blaauw some Notes on the Black-faced Ibis, telling of their nesting in captivity. There are articles on "Some Birds of the Balkans," taken from the "Balkan News," and "Birds of the South," from the "Sydney Daily Telegraph," a continuation of Dr. Hopkinson's References List of Coloured Plates of the Parrots, and some very interesting letters from Miss Rosie Alderson, the Duchess of Bedford, and the hon. editor, Mr. H. D. Astley.

The Bird-Lovers' Opportunity.

How to See Wild Bird Life.

Upon the suggestion of the hon. treasurer, Mr. T. R. Trower, the National British Bird and Mule Club is organising for the spring and summer months a series of rambles for the purpose of studying the wild life of our native songsters. The annual outing of the Society has always been one of the best attended and the most interesting of bird rambles, and we are sure that very many bird lovers will welcome the extremely original idea that has been suggested by Mr. Trower.

We have been favoured with a full programme covering alternate Thursdays, afternoon, Sundays, full day, and Saturdays, half day, with two-day excursions for Whitsuntide and August Bank Holidays, and the districts to be visited are those which are known to be prolific in birdy interest, and at the same time easy of access for London bird lovers.

Each ramble will, if possible, be under the direction of a capable guide, who is at the same time an expert in bird life, and full particulars will be published at least a week beforehand in Cage Birds. There will be a splendid chance for workers who are debarred by present circumstances from taking the customary yearly holiday, for everyone will be welcome to join any of the outings.

Upon publication in Cage Birds of the date of each proposed outing, Mr. T. R. Trower, 442, Caledonian Road, King's Cross, London, N., will be pleased to give full particulars to any who desire more detailed information.

The first ramble of the season will take place on Thursday afternoon, April 12, to Cobham and Hatchford, returning from Effingham Station. Train leaves Waterloo 2.30.

A New Society for Glasgow.

On March 29th, in Nelson's Temperance Hotel, Glasgow, writes Mr. Hugh Jamieson, 4, Leny Street, secretary, a meeting of British Bird Fanciers was called, at which a good number of well-known fanciers attended. It was decided to form the Glasgow British Bird and Mule Club, and a committee was appointed to draw up rules for approval at the next meeting in Nelson's Hotel, 83, Ingram Street, on April 14, at 6, when all fanciers wishing to become members are invited to attend. The membership is fixed at 2s. 6d.

The Opportunist Thrush.

In "Country Life," a correspondent, M. Stevenson, writes:—"On February 9th, our now solitary woodman noticed a Thrush in some brambles, nearing its end. He took it up and laid it by his fire, and in moving part of a fence managed to find a few worms, which it ate readily from his hand as fast as he could turn them up. When somewhat recovered the bird perched on a bough above the man's head, where he pointed it out to a passer-by. The woodman went away some distance to his dinner, after which the Thrush rejoined him, and on his going to work at the far end of the wood followed him there, too, and remained with him all day. What was more remarkable was that on the following day, a Saturday, directly the man arrived to work, the Thrush reappeared, but by Monday morning the frost had broken, and the bird vanished.

THE NIGHTINGALE IN NATURE AND CAPTIVITY.

(Continued from page 170.)

By the kindness of a reader, Mr. O. S. Manners, Stapleford, Notts., we are enabled to republish the following interesting article, which appeared in a work published in 1799. The wording is reproduced exactly as printed, and we have thought it as well to add an occasional foot note.

VISIT him again about seven in the evening, giving him a supply of fresh worms, some of which you cut in two, that the paste may cling to them, which the Nightingale, swallowing, will be insensibly brought to like. The next day give him twenty-five more at eight in the morning, as many at noon, and also at seven in the evening (all cut in two, and mixed with a little of the paste). You must be careful not to stir the cage, for that would make the bird wild, neither must you suffer him to see you.

Continue thus the third day, only now cut the worms in three or four pieces, to mix the better with the paste. Thus go on for three weeks, when you are gradually to lessen the number of the mealworms and increase the quantity of paste, according as you find him relish it, for some will take to it sooner than others. It is no small advantage if they are soon reconciled to this sort of meat, for it makes them stout, and they continue longer to sing.

If you can easily procure mealworms, give the bird ten or fifteen, three times a day, during the whole singing season.† Remember you put not your mealworms into glass, for the bird, seeing them through the side of the transparent cups, will endeavour in vain to seize them, and so starve to death.

To make a Nightingale sing you must darken him up on all sides. This little creature is so timorous that he is terrified at every thing he sees, and flutters till he kills himself against the wires of the cage, and being kept without light he rests himself content with eating and drinking.

Of the Construction of the Trap for Taking Nightingales.

The trap for taking Nightingales is very simple and commodious, as it may be carried in one's pocket, and it is very sure in its performance.

Make a semi-circle (see Fig. 1), CAC, of iron wire half the thickness of your little finger, and eight inches diameter. There must be a hole or loop at either end, CC, through which put a double string of well-stretched packthread, fastened at each end.

Between the packthreads must be fastened the extremities of a second iron semi-circle, CFC, by means of two flat pieces of wood, GG; this should be of wire of the size used for the largest Parrot cages, and must be turned and shaped as represented in the figure. To the two semi-circles must be fitted the silk net EE, which should not be straight, but rather a little loose, so as not to confine the bird too close when taken.

Everything thus disposed, a wooden pin H, pointed at the end, must be introduced between the packthreads to twist them to a sufficient tension, and then stuck into the ground quite up to the head; this done, the semi-circle CAC must be confined flat to the ground by the wooden crook I, and the other semi-circle, CFC, be pulled open, and kept so by a kind of trigger, K, wherein are cut two notches near the ends for receiving and keeping asunder the semi-circles, as in the figure.

This trigger is baited with mealworms, stuck on with pins; then the net is to be spread flat, by drawing it from the middle towards the circumference of the trap, and thrust under the wire circles, to prevent its being entangled with the trigger when the trap falls.

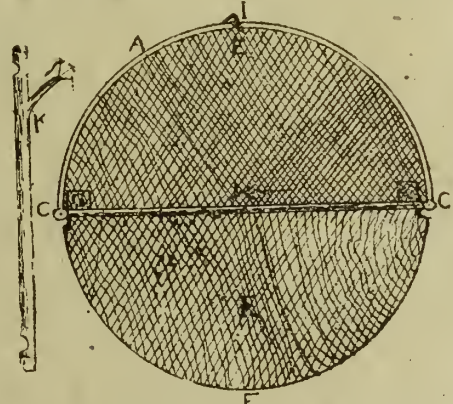
Care must be taken that when the net is spread and the trap set the semi-circle F may rise about two inches above the ground, to hinder the Nightingale from seizing the bait without going into the trap. Lastly, the trap must be contrived so as to fall easy, and clear of any stone, bough, or briar.¶

There are three sorts of Nightingale cages: 1. The dark one wherein they are kept from the time they are taken till the season for their singing is over. 2 That into which they are to be removed after that season. 3. The cage for blind Nightingales. The first should have three of its sides of thin wainscot or deal, with the face only wired, 16 inches long, 14 high, and 10 deep, the wiring to be covered with green serge, nailed very close.

The door should be at the bottom of one side, big enough to admit your hand, and should open at the lower part, for the easier conveyance of the cups with the meat and drink; the face should be of slender sticks rather than wire, the hardness of which would be apt to hurt the Nightingale's tender feet, or to break his feathers when he flutters, which accidents would greatly retard, if not entirely spoil his singing.

On the top of the cage, just over the cup that holds the paste, may be made a hole, and in it a little tin funnel, through which you may drop the mealworms, and thereby prevent putting your hand three times a day into the cage, covering the funnel to keep out the rain; for the least wet would spoil the paste.

In this cage the Nightingale is to remain till he has done singing, which commonly is about the 20th of June, and then you take him within doors, but keep him still dark for a fortnight longer, when you may begin to open the serge a little at bottom, thus continuing every day by little and little, the bird will gradually be reconciled to the objects about him. After a while you may take him out and put him into the second cage wherein he is to remain.



An Ancient Nightingale Trap. (See Text).

During the bird's dark confinement you must not attempt to clean out his cage, because it would certainly make him wild and spoil his singing, nor is it any ways necessary, since he always keeps upon the perch but when he descends to eat or drink.

The second cage only differs from the first in being open before, with a door in the middle of the wires, and a drawboard at bottom for clearing away his dung.

When you give the bird mealworms in the new cage, it will be best to leave them among a little moss at the bottom, or let him take them out of your hand. If you mix them among a little paste he will be apt to scatter it about to get at them. To give him too many will make him lean and phthisicky. [Here follows a description of a cage for "Nightingales that are grown blind, or as have been blinded on purpose," which would make it apparent that the brutal doctrine that a bird which has been purposely blinded will sing better for the barbarity was believed in in France during the eighteenth century.—Editor.]

Of Breaking § Nightingales.

Catch a pair of old birds about the end of the spring, in the manner as you have been directed before; then set two traps baited with mealworms very near the nest, by which means you will soon have both cock and hen, and, having brought them home with the nest of the young ones, put them all together in a dark closet.

Their meat and drink you place near them in two cups, and in a third about fifty mealworms, and this you do every day as has been prescribed about Nightingales newly taken; thus you will soon see the cock and hen fetch the meat and mealworms to feed their young.

Their meat should be one half bread, the other bruised hemp seed and minced boiled beef, with a little parsley, and now and then some yolk of egg boiled hard, or the paste to be described hereafter, mixed with equal parts of raw sheep's heart or beef, finely minced, without any skin, fat, or sinews. The affection these creatures have for their young ones causes them immediately to set about nursing them in their confinement.

As soon as they can feed themselves you may put the cock and hen in two separate cages, where they are to be kept the whole winter, till the next spring, but in case the eggs should not be hatched when you take the old ones, you must content yourselves with the birds only, which you keep separate, but in the same closet where you purpose they shall lay eggs the next spring, that they may be used to the place, for which end you may suffer them to get out of their cages, and thus you will have a pair of Nightingales prepared in every respect for home breeding at the proper season.

The next year, about the beginning of April, open the cages for the whole season, and scatter about the closet dry oak leaves, picked dog's grass, and deer's hair, with one or two old Nightingales' nests.

In the corner of the closet, near the window, stick fast two or three branches of slender, dry twigs, tied slackly together, letting the lower end rest on the floor; then take some handfuls of the oak leaves and stuff them among the twigs, leaving open the passage where your hand went in for an entrance to the Nightingales; you place likewise near at hand a small wooden tray, full of ordinary mould, and a small, shallow earthern pan of water for them to bathe themselves in, which you renew every day, but when the hen sits you take it away. The closet should be towards the south, for the benefit of the warm sunshine.

Some persons of curious taste have enclosed a pair of Nightingales in a grand aviary or cage built on purpose, in a proper corner of a garden, surrounded with little yew trees, maples, etc., where they have built their nest and brought up their young as well as in the open country.

If the closet looks into a garden you may safely venture to take out a pane of the window glass, and leave the old ones at liberty to go out and return, which they will not fail to do whilst their young ones are incapable of feeding themselves. At first, however, it will be best not to trust them out both together, but the cock by himself, and then the hen by herself, and lastly both together.

Let the hole be as near the nest as may be, thus you will have the pleasure of hearing the cock sing day and night in your garden whilst the hen is sitting, and they will have the opportunity of procuring a thousand little insects after the eggs are hatched wherewith to feed their young.

You must be cautious of visiting the closet too often, especially whilst you allow them the liberty of the garden; and it should be the business of one person only to look after them, which will make them the more familiar; but above all, it is highly necessary that neither dog, cat, mouse, or rat, should ever disturb them; for any of these would certainly drive them away—so as never to return again.

(To be continued.)

† Here, again the text is reproduced as printed in this old manual. From thirty to forty-five mealworms per day would be enough to kill any Nightingale from indigestion.

¶ It will be seen by the illustration that the trap described is nearly the same in principle as the one used to-day for similar purposes. The main difference is that the spring of the old trap was made by twisting the well-stretched packthread, whereas modern traps are fitted with steel spiral springs acting on the portion C. F. C.

§ The word "Breaking" seems to be a misprint for "Breeding."

Correspondence.

EVERY WEEK A PRIZE OF TEN SHILLINGS IS GIVEN FOR WHAT, IN THE OPINION OF THE EDITOR OF "CAGE BIRDS," IS THE BEST LETTER PUBLISHED UNDER THIS HEADING. THE LETTER MAY BE ON ANY SUBJECT. IT MAY BE A COMMENT, FOR OR AGAINST, ON ANYTHING WHICH IS PUBLISHED IN OUR PAGES, AN OPINION ON THE POLICY OF OUR PAPER, OR MAY HAVE NO REFERENCE WHATEVER TO ANYTHING WHICH HAS ALREADY APPEARED. SO LONG AS IT IS ON A "BIRDY" SUBJECT, AND IS ORIGINAL, IT WILL BE ELIGIBLE TO COMPETE FOR THE PRIZE.

The Prize this week is awarded to Mr. E. W. Humphrey, Westgate, Thirsk.

Wild Seed for Cage Birds.

Its Gathering, Preparation and Preservation.

SIR,—As "Novice," in CAGE BIRDS of Mar. 31, requests some information on the collecting, separating, and keeping of wild seeds for use in winter, I beg to submit for his and other fanciers' assistance my own methods, and I may say I have now on hand some shepherd's purse seed gathered in 1915 which is as good to-day as when first gathered. I have also kept dandelion and thistle seed equally as long, and, in first rate condition, and have never yet found any get mouldy or deteriorate in any way.

My own idea is that the thistle seed referred to by "Novice" had not been thoroughly dried before storing in tins. It is in the heads of the thistle where the most moisture lies, and therefore it is far the better to separate the seed from the heads before drying and storing.

There appeared in our valuable paper, CAGE BIRDS, some time ago a sketch sent by me showing a simple device for separating the seed of the thistle, which to my mind is the most difficult of all seeds to separate. I have not found this surpassed as yet, and for the information of "Novice" and others interested I send a description.

To make the apparatus get two pieces of wood 10 inches long, and two pieces 5 inches long, fasten together to form a rectangle, and fix wires across at quarter-inch distances. Then get a long linen bag, an old shirt sleeve will do, and stitch the frame into it. The bottom is fastened with a piece of string, which is untied to take out the seed when gathered. It may be carried under the arm when not in use, and with it I have many times gathered a pound and a half of seed in an hour. It is quite easy to operate, and has the advantage of leaving behind all the down and useless heads, which only make an abominable amount of dirt when taken home, to say nothing of the kind remarks which are sometimes passed by the home authorities.

All "Novice" has to do is to take hold of the down of ripe thistle heads and the seed will come away with it, and by lightly rubbing across the wires the seed falls into the bag, leaving only the down in one's hand, and this is thrown away.

The seeds I find most valuable are the thistle, dandelion, shepherd's purse, and knapweed. The dandelion I simply gather first thing in the morning, before the heads are opened by the sun, and after nipping off the downy part the remainder is dropped into a large paper flour bag, which, after having a few holes pricked in it, is tied by a piece of string and hung up to dry thoroughly, when after a little shaking the seed will be found to have all left the heads, and will be quite easy to separate by means of a sieve made from perforated zinc, afterwards blowing out the remaining dust, and you have the seed ready for drying off.

I generally find the seed of shepherd's purse the easiest of all to gather, as in a few places where it grows abundantly I can any day fill a bag in about an hour. The method I adopt is as follows:—Take a bag or, rather, a clean sack, and carefully pull up the weed by the roots, taking care to keep it nice and straight. Do not subject it to more rough usage than is really necessary, or you will lose a quantity of seed. Tie round with string, and after cutting off the roots place your bunches in bag as collected until you obtain a sackful. I have at home the top half of the coal-house (any outdoor place will do), boarded across, and the boards I cover with sheets of paper and hang all the bunches up or lay them on the top until thoroughly dry, when all the seed will fall on to the paper with the least shake imaginable.

Regarding knapweed, or hardheads, as it is sometimes called, this will be found quite easy to separate if gathered and tied in bunches similar to the shepherd's purse, only cutting the heads off much closer and leaving the stems standing where grown. The seed will drop out quite clean and dry, free from any dirt or refuse whatever.

Take care that all seeds are gathered as dry as possible, as seeds gathered when soaked after a hard day's rain are similar to fruit gathered when wet, not worth the trouble. If "Novice" will follow out these methods and always take care to have his seed thoroughly sun-dried prior to storing in tins, which must be kept in a dry cupboard or other place, he will have no cause to complain of seed going mouldy, and the way his birds will enjoy the seeds during winter and the extra sheen it will put on his birds will well repay him for all his trouble taken in collecting.

Of course, when the seeds are plentiful in summer time the birds have to thrash out their own, as they generally get a little every day during breeding season and the moult if possible. Lastly, let "Novice" use the seed saved sparingly, and follow out the useful hints always given in CAGE BIRDS, and he will soon find his birds look as well and as happy as those of one who has no need to sign himself "Novice."

Oxalic Acid for Red Mite.

Sir,—I shall feel obliged by your permitting me to thank Mr. Beddall for his complimentary note re above, and to express my appreciation of Mr. Whitaker's exhaustive letter on the matter. I hope to be able shortly to give a few hints to novices on the feeding of Canaries, also a few remedies for their various ailments.

Old Helpmate.

[We shall, of course, be very pleased to receive and to publish the notes kindly promised by our correspondent.—Editor Cage Birds.]

Bird Societies and Governing Bodies.

Sir,—The article by "Napoo" in Cage Birds of March 31 is one of the most interesting items I have read for the last ten years, and I am sorry the writer does not care for his name being given. Anyhow, he has my hearty support. I have read this article three times over, so my interest has been great. The four cross headings, "Types of Fanciers," "People that Help," "Why Delegates Fail," and "No Safety in Numbers," sum up the article admirably. Nearly every word written is perfectly correct, and very little criticism is possible. For the past ten years I have had friends who have dashed into the fancy, spent good money both on birds and bird rooms, joined a society, and to many I had given personal help and every possible encouragement during many friendly visits, but after the second or third year they had sold all off and had parted with everything at a ridiculous reduction to some adept always on the look-out for such favourable opportunities.

I have never been able to ascertain from my many friends the reasons why they have been so disheartened as to give up and make such sudden drastic clearances, as I had not the chance, as it happened, to be on the scene, otherwise I should have pleaded with all my power to them to hold on.

I think some gigantic system as regards the shows in particular could be got up on some other basis entirely, each city to have its own great event for the year at a permanent fixed date, with one head office, a treasurer, and a secretary. Membership fees, say, 4s. June 31 and 4s. December 31.

John H. Jowett.

Linnets as Songsters.

How to Moult and Feed Them.

Sir,—I have read with great interest the article of Mr. Allen on Linnets for contest singing, for I think this is one of the cleanest sports working men can follow, and it is very simple when one knows how to manage. A few words to the inexperienced may, however, be of some value. Each season I buy or catch eight or ten Linnets, and take out the best from among them, sometimes I may be lucky enough to get four or five good ones, but even if I only get one of these I find this method pays. I get the birds towards the end of November, or the first week in December, and when they have had a good moult I cage them in ordinary Linnet cages. Treated in this way I have had the birds singing within two days of being caught. As soon as they come into song I put them on a table where they can see each other, and this soon gets them tamed. Linnets bought while they are "Yelpers," that is, still in their nest feathers, very seldom moult properly, and will be in soft feather all the year round. Those reared from the nest are just as bad, and it is much better, therefore, to buy a field-moulted bird at the end of the year.

A Linnet with a white beak is no good for singing purposes; one which is of any good must have a blue or black beak. A Linnet of mine which has won more than 30 first prizes and many matches was bought as a field-moulted bird. When moulting time comes, and the birds begin to drop their feathers, I keep them in a dark place such as the cellar, properly fed, and with plenty of fresh water, and in less than six weeks they are ready for singing again. Last year my best bird came through his moult in a month, and won a match. Linnets are very hardy when they are used to cage life, but sometimes they are very queer birds to moult properly, and the method I have given is the secret of moulting them and keep them in good singing condition for muling purposes. If any fancier has a Linnet that will breed Mules that bird is worth taking care of, and will repay all the attention that may be given to its wants.

To sum up, I would repeat, don't buy young birds when they first come into the market, for this is throwing money and labour away; let them moult out in the fields at first, and you will get them at the same price as they would cost in August and September, and they will do much better for your purpose. The proper feeding of Linnets is another secret, but as I am in good humour for giving away secrets at the moment, I will give my methods. I feed always on English rape and Linseed, about two-thirds rape to one-third linseed; this mixture entirely suits the wants of a Linnet, and they will come out like healthy little pheasants. When they are singing nicely, put them into the window, and let them stop there for about an hour each day until they get used to being so placed. When you wish to try them, cover them up for a day or two, they will soon get used to this, and will sing in your hand, as any of mine will do.

J. Hardman.

The Federation of Roller Canaries.

The Barring of Unfederated Clubs.

Sir,—Mr. Montague, replying to my letter on above, says, quoting my words, that "Liberty of action and British freedom" comes strangely from one who was against the necessary reform in the government of the Roller fancy being taken out of the hands of the British Roller Club. Why strangely? I was for reform; I was for every club having a voice in affairs relative to the fancy. But the B.R.C.C. was the authority of the Roller fancy, and I was against a reform of government, which they would themselves have given had they been granted time, being taken out of their hands.

Why does he say it is "strange" that I should have been against a revolution planned to destroy the rule of the, at that time, accepted Roller government? If at some future time there should be a move to upset the Federation, would Mr. Montague consider it "strange" on his part to be loyal to the Federation, and to plead that what reforms were asked for should be left in its hands?

I have nothing whatever to do with his question to Mr. Willows, regarding the committee of the B.R.C.C. That was not the object of the letter I wrote to your pages; that object was to protest against a rule which would rob every fancier in this country of the freedom to show at what show he chooses, whether it be held by a federated or an unfederated club.

Regarding that rule, Mr. Montague urges the members of federated clubs to support the rule, and suggests that by doing so they will be upholding liberty and freedom. That, indeed, *is* "strange," if you like! They would, vide Mr. Montague, be upholding liberty and freedom by voting for a rule which will make them slaves, by forbidding them to show their birds at the Midland or B.R.C.C. shows.

Mr. Barnett asks me how I can honestly remain a member of two clubs, one federated and the other not. I can assure him that I can honestly do so, and that I shall not try to uphold the Federation with one hand and pull it down with the other. I live in hope of a united fancy again someday; and I believe that end will be best served by members in my dual position sitting tight in their clubs, remaining as a connecting link, rather than taking one side only, and so help hopelessly to divide South and the Midlands from the North. I am afraid that the suggestion that this would be "running with the hare and hunting with the hounds" betrays a desire to see the fancy divided into two hostile camps.

Since the Federation, and only that body, can now stand for unity, it may interest Mr. Barnett to learn that I have used my best endeavours to induce the M.R.C.C. to join the Federation; but if it decides not to join, that club will still continue to have my membership and my support. The same with the B.R.C.C. I would like to see them both in the Federation—but entering it willingly, not being boycotted into it. If they remain out, I shall no more desert them than I shall desert Birmingham because that club has gone in. And I shall hope eventually to see "all in."

One important point; Mr. Barnett confuses the point at issue with the ring question. The rule I object to has nothing to do with the ring question. The Federation has every right to bar birds not federation rung if it chooses. I am not quarrelling, nor should I ever quarrel, with that. But if the Midland and the British Roller Clubs will admit birds rung with the Federation rings to their contests, then I say that the Federation has no right to say to me, or any other man, that I shall not enter my birds.

I shall use the Federation rings; and when I have used them I claim the "liberty" and the "freedom" to show my birds where and when I please. I hope that every other fancier will support me by voting against this enslaving rule. I hope they will stand by me. But if not, I am prepared to stand alone.

Skylarks for Singing.

How to Hand-Rear, and How to Feed the Adults.

Sir,—As a keeper of Skylarks all my life, I have made it my study to get to the top of the tree in hand-rearing and feeding them, both for contest and home singing purposes, and I will endeavour to give the novice a few hints which may be of value. I should like to state that I am not going to tell the whole secret of getting a bird ready for contest, for any person with common sense will agree with me when I say that those experts who do o'wt for now't do it for their own purposes. If one desires a good bird either for show or contest singing the first thing to do is to go to a bird shop in which several Larks are being kept in a store cage, keep a watch until you see a particular bird that will come and face you, a bird that will move from end to end of the cage without showing the slightest nervousness, for that is the bird for your purpose.

When you get it home put it into a clean cage with plenty of sand or gravel on the bottom, and give it luke-warm water to drink, hang in a place about six feet from the floor, where it can see all that is going on, but be careful to keep it where it is free from draughts and where you will not have to be frequently passing it.

When it has been caged for about three days and you can see it settling down, run it out of its own cage into a washing cage, and spray the bird with luke-warm water, then empty the surplus water out from the washing cage. Place a dry clod on the bottom and stand the bird in front of a moderate fire until it is fairly dry; then run the bird into its own cage, which you have previously prepared with about half inch of warm gravel on the bottom, and let it take a dust-bath until it is dry. Afterwards cover him up until the following morning. The next morning lift sufficient of the cover to allow him to see to eat and drink, but be careful that he does not take a cold. If the bird keeps steady it will soon commence to sing for you, and ultimately may be good enough to represent you in a singing contest if you wish.

If possible always make your own food, unless you are fortunate enough to know of someone who makes good food for the use of his own birds. The following recipe will be good enough for any Skylark until it commences to sing for its keep, and then it will want something a little better. Take 1 lb. of pea chips, ¼ lb. of ground rice, ½ teacupful of stale bread crumbs, and 2 oz. ground white malt free from shales. Then melt 3 ozs. of pure leaf lard and rub well into these ingredients. If you have a small grinder take also 2 ozs. of hemp seed, 2 ozs. of golden pleasure, 1 oz. blue maw seed, and 2 ozs. groats; grind these all up finely, add them to the mixture, and bake all in a warm oven for about 20 minutes. Keep on turning it over with a fork or spoon while it is being baked, then turn it on to a sheet of paper and let it dry over night; afterwards run it through the grinder again, and it will be ready for use.

To hand rear a nest of young Skylarks the young should be taken when they are about eight days old, but it should be borne in mind that they will require a few days longer of feeding than a bird which is just on the point of running out of the nest. However, the extra trouble with these young birds is fully repaid by their extra tameness, for they will always be ready to meet you with open mouth for a tit-bit, and they will not knock their heads in jumping to the top of the cage like one which was older before being taken.

The following is the method of treating young birds up to the time until they are 12 days old:—Get a whole round from a stale loaf of bread, steep it for two hours in a basin of water, squeeze all the water out, and put it into a saucepan with enough new milk to cover it. Bring the milk to the boil, and keep on mixing the bread while the milk is boiling until it is quite fine, then pour the bread and milk into a cup and let it get cold. During the first two days they should be fed every 20 minutes, and for the next four days every half hour, then they will almost be large enough to pick the food from a peg inserted through the wires.

They must be hand fed six or eight times a day for a few days longer until they are big enough to pick the food for themselves, and when they can do this feed them on the following mixture:—Break a new laid egg into a cup, add one handful of stale bread-crumbs and one boiled potato, and boil them together until they come to a nice paste, add about half an oz. of maw seed, and this will make a complete food for the birds. No water should be given until they are three months old, or all the work will be in vain, as the birds will all die one by one.

If there is anyone who desires further information, I should be at any time pleased to give such on application

G. Maloney.

Specials at Porth Show.

The Secretary Replies.

Sir,—Owing to the difficulty of getting my Cage Birds, I knew nothing about the letter of Mr. B. Robinson in Cage Birds of March 17, until a fellow member told me; hence the reason for not answering before. I am extremely sorry that Mr. Robinson has not received his special. I have asked the donor of this special for it on several occasions, and have not received it up till now. In the latter part of Mr. Robinson's letter he says he had a reply from me, saying "next week." This was not so. In my reply to him I said he should have the special as soon as the donor gave it to me, "probably next week." I can assure him he will receive the special as soon as it is paid to me, and I am very sorry for the delay.

A. H. C. Legg, hon. sec.

Hen Bullfinches.

How to Keep and Get Into Condition.

Sir,—Select your hens about November, if possible, and for this I advise paying a visit personally to a good catcher, or purchasing on the deposit system through Cage Birds. Young hens I prefer, and I see that they are clean and lively, not sit sulking in the corner of the cage. Always allow them plenty of cage room, and plenty of nice clean water to bath, as they are particularly fond of this.

Place in a cage along with the bird you intend trying to mate with, and keep plenty of wild seed in the cages; seeds from threshing boxes answer well. Give them plenty of dock, nettle, plaintain, groundsel, ash-keys, etc., also blackberries, raspberries, privet; also gather plenty of wild seed for use in winter and early spring.

As soon as possible, give young dandelion leaves and heads, also the flowering heads of coltsfoot, which I see are just putting in an appearance. Feed on a good Canary seed as a staple diet, and give a little hemp, niger, rape, etc., about twice a week.

T. Pargeter.

Birds on the Rail.

Charges for Special Delivery.

Sir,—Perhaps you will grant me space for a few words in regard to the delivery of birds by railway companies. I would ask someone who knows the ropes to give us through Cage Birds a few hints as to the dispatch and delivery of birds, as I am sure there are many as well as myself who would be glad to know, for instance, how far the railway companies are responsible for the delivery of birds taken and carried per rail.

A Norwich cock was recently sent me by a fancier in Kingston-on-Thames, a distance of perhaps four hundred miles. The bird was sent off on Wednesday, March 21, in the early evening, and I am led to believe from enquiry of the railway clerk here that it should have reached me my noon-day on Thursday, but the bird was not delivered until nine o'clock on Thursday evening. I was not aware of the bird coming, as the postcard announcing its dispatch did not come till the Friday morning, or I could have been at the station to meet the bird, as all ordinary delivery stops at 6 o'clock. The result was that one of the boy porters had to deliver the bird to me, and I was charged ninepence. I thought, of course, that I was paying the carriage, not knowing that I was paying for special delivery, and I also tipped the boy, thinking that he had been sent with the bird as part of his duty, as ordinary delivery had stopped at 6 o'clock.

The same thing happened the same night to another fancier here, but he had 1s. 3d. to pay. He also tipped the person who brought it, this time the postman who had been on station duty late that night, and who was passing this fancier's door. The railway official handed the bird over to him, and he got the 1s. 3d. and the tip. This fancier also thought he was paying carriage on the bird.

When I came to hear of it the next day from the postman it set me thinking whether I had a right to pay for special delivery of a bird and I have come to the conclusion that the railway company got rid of their responsibility as quick as they could. They did not pay overtime to the boy for the delivery of the bird as I know now that the ninepence I thought I was paying for carriage was paying the boy for delivery of the bird.

I did not grudge it to the boy, as I was glad to see the bird safe and sound, and I may be wrong in my way of thinking, but if this should be the means of bringing out a few thoughts from fellow fanciers I shall be very pleased, as I believe there are fanciers other than myself who are a bit in the darkness.

T. R. Wallace.

CORRESPONDENCE.

(Continued from page 200.)

A New London Roller Canary Club.

Sir,—At a crowded and enthusiastic meeting of Roller fanciers held at the Bazaar Tavern, King Street, W., Mar. 27, with Captain Bloomfield in the chair, the proposed new London Roller Club was inaugurated. It was decided that the club be known as the Southern Roller Canary Club. The headquarters and times of meetings have yet to be decided, but the next meeting will be held at the Bazaar Tavern on April 27, at 7.30. The following officers were elected:—President, Captain Bloomfield; Vice-President, Mr. H. W. Gutierrez; Hon. Sec., Mr. J. Aspinall, 50a, Dagnan Road, Balham, London, S.W.12; Hon. Treas., Mr. R. Dugdill; auditors, Messrs. F. Hocking and A. Gooding. An Executive Committee of ten was appointed, and the entrance fee and subscription fixed at 1s. and 3s. 6d. respectively.

As one of the main ideas of establishing this new club in London is that of the encouragement and education of the novice and amateur members of the fancy, it has been arranged that lectures and discussions on all matters appertaining to the Roller Canary will take place at the monthly meetings. The most prominent and experienced judges and fanciers in the country have kindly promised the club their services in this respect. Every effort will be made to make the meetings both instructive and interesting, and, judging by the number of ladies and gentlemen present at its inception, this new club already promises to become one of the largest and most important Roller clubs in the country.

The Society has no radius. New members and visitors are heartily invited and welcomed. All applications for membership and enquiries should be made to the hon. sec., as above.

J. Aspinall.

My Voyage to Cuba.

The Story of a Good Bargain.

Sir,—I have been a bird fancier ever since I can remember, and I still keep birds, although I have not the time now that I used to have at home, but I still manage to keep one or two birds at home. Those I only see once in a while, as I am a seafaring man. Having a job on a Government transport, however, which allows me a small berth to myself amongst the crew, I could not bear to see any one of the four walls without a cage, and a feathered songster.

When we arrive safely in port after a rough voyage, the first thing we generally ask for is letters, and having glanced through my last lot I find my wife informs me that my Linnet died during the last dose of frost, and the old Canary hen is looking skywards, so I think I'll carry my songsters with me in future.

I joined my ship near home, and I brought away with me a Goldfinch just starting to moult, thinking if left at home he would be amongst the angels soon. By the time we got to Portsmouth he was still "champion," so I strolled ashore and got a stock of seed; hemp, niger, teazel, and thistle, and a companion for him for which I paid 2s. It was a good specimen, and seemed so content as he sat preening his feathers and shaking himself that he might have been caged years. He was soon mine, and I made my way aboard to sail next morning for the Admiralty knows where, and submarines permitting.

My Portsmouth Goldie started singing in four days after leaving, so I was not had that time, but the other had a rough time in the moult, and did not look at his best again until we got to Trinidad, advertised as the land of the Humming bird. This may be, but I saw no Humming birds, as I did not get ashore, being too busy. I saw Parrots, but not the quantity or at the price I expected. One of our chaps got a Parrot. It looked as if it had been sitting on and had hatched a young torpedo, as it had feathers in some places and fresh air in others, and armour plates on its legs thick enough to make a battleship. If you went up to him he started his syren, and kept it going, but it is tame now to a certain extent.

I still kept my eyes open for small birds, but Sunday's the day, so at about 8 on Sunday morning one of the crew called me up. "Come here, quick," said he. "What kind of bird is this; its singing fine?" But it was only a Swallow warbling on the flagstaff. Then somebody says, "Here's some more birds," and up the poop came a coolie with a couple of cages, so of course I was all attention. After a few minutes bargaining, I got two birds, one a little seed-eater, and the other a fruit-eater about the size of a Siskin, which he swore would sing by 6 o'clock the same day. It did, if that was singing, like rubbing two knives together, a plaintive call of two, sometimes three, pipes, which he would repeat if I imitated him. It was a green tinted bird, with a black bib on his throat like the Siskin, only it was square. The other was a little brown bird, with a head and beak like a Bullfinch, which seemed too heavy for such a small body, but he looked a bulldog breed all right; he called like a Sparrow when spoken to. I watched those two, but I only heard the green one sing, but as soon as the bath was put on his cage he would be into it a dozen times; as soon as he was dry he would be in again. I fed him on banana, and tried to meat him off on to milk sop, but he struck, and would not eat it, so I seriously thought of giving him his liberty, but the next morning we arrived in Cuba.

Here I saw some fine birds alongside the wharf, but we were under quarantine, so I could not go into the bush to get a good view of them. They were similar in shape to our Kingfishers at home, but as big as the Hoopoe, and at that time I only saw them in pairs. Rising next morning I put my birds outside, four of them, two Goldies and the two Trinidads, and I thought I had struck Club Row on a Sunday morning. One Goldie was singing to beat the band.

Presently up came a gentleman, and, of course, I was pointed out as the proud owner of the birds. His first salute was, "How much?" That was about all the English he knew, so I said five dollars (dollars are the money out there) I thought that had settled his longing for them, for I did not care to sell them, as I thought we would go to America, and I would get a good price for them there. He had a look at them, and spoke to me in Spanish, which I did not understand, and one of the crew tried to interpret, and that settled it for that day.

Next day I had permission to go on the wharf. A crowd of small birds were gathered there eating the sugar that was spilt on the quay. They were very small, and of a brownish colour, and had a faint sign of a black bib and a pearl eye like a pigeon. As I strolled along I got quite close to them, so I stopped to get a closer view with the glasses, but they scattered. One did not go far, however, so I stood still, and could see it had somehow stunned itself. I caught it quite easily and caged it, but I released it in a few days, as I could not get it to settle. It was caged-lightning.

Then we went farther into the town, and I had another visitor. He spoke to me, but again I was handicapped by not knowing his language. He made signs for me to follow him, so I went, and he pointed to my birds, and shook his money in his pocket, and in the end I sold him my two Trinidads and my moulted Goldfinch. I made him understand by gestures that he would have to bring me a good Cuban bird, and I would buy it from him. He waved me on one side, and took from his belt two muslin bags, and popped in the two Trinidads, but I kept the Goldie until he brought my Cuban bird.

The following day he came back, all smiles, with a nice cage with three birds in it, one Crested Canary, one black bird, with two white flights in each wing, and my beauty which I was told the natives call the King Bird of Cuba. It was the best of the three, so I took it in exchange for the Goldie. Leaving Cuba we soon got a change of weather. Inside of twenty-four hours my King bird called a little, and seemed to try his song over, but the cold gripped him, and I had to put the fire on to keep him warm.

I have got him to London now, but it was touch and go, for I nearly lost him when we arrived, as the frost was very severe. I think I shall manage to get it home now; it seems to be very hardy, or else I've been lucky. If I am so lucky as to be at home during the coming show season, if there is one, he's a candidate. It is now in the best of feather, and will bath at any time, but I've another sea journey to make before I'm finished with this ship, and "there's many a slip," as the old saying goes.

I always carry a stock of seed with me, as around our coasts there are plenty of Chaffinches to be caught on the deck, and they make good cage birds. I have caught dozens of Gold-crested Wrens, and one Jenny Wren, the only one I've seen in 14 years along the Eastern coast of England, one Bullfinch cock, and Hedge Sparrows, Larks, Pipits, Thrushes, and Starlings. In the Mediterranean Sea Swallows by the hundreds cling to doors, and it is common for them to fly through the ports and settle on pictures or any place that affords a foothold until the next morning. Hawks and Doves are also common visitors, and I have caught one Quail in the Red Sea. I can always manage, therefore, to get a feathered cage bird, even if I can't get my paper, Cage Birds, which I always look for, and many valuable hints and information I get from it. Wishing it every success.

F. Jackson.

Nests of Birds, Poultry, etc., should be regularly sprinkled with KEATING'S POWDER, especially when hens are sitting. Don't forget to do this just previous to the eggs hatching, to destroy the Red Mite. Kills all insects. Harmless to everything else.

Queries Answered

(1)—*All questions must be clearly written in ink (or typewritten) on one side of paper, and conclude with either the correct name or a pseudonym.*
(2)—*The proper name and address in full of querist must always be written on a separate sheet of paper, and enclosed with the query.*
(3)—*Queries intended for different specialists must be written on separate sheets of paper.*
(4)—*Queries must not include or be included in orders for books, instructions re advertisements, or any other matter for publication.*
(5)—*The department to which the queries refer must be stated on the left-hand corner of the query.*
(6)—*Queries received during any week, up to the* **first post on Saturday morning,** *will be answered in the issue bearing date of Saturday in the* **following** *week.*
(7)—*If an answer by post is desired from our specialists, a postal order for sixpence must accompany any query relating to sickness of birds, or a shilling in ordinary enquiries, with a stamped and addressed envelope in either case. Dead birds must not be sent to the office (see Post-mortems).*
(8)—*All who desire letters of complaint written to advertisers must state grounds for doing so clearly and fully, and enclose a fee of sixpence.*
(9)—*All queries must be addressed to the* Editor, "Cage Birds," 154, *Fleet Street, London, E.C.4. Postcards are not admissible.*

CANARY QUERIES

Answered by CLAUDE ST. JOHN

CAUSE OF DEATH.

Greenhorn.—Please note that in section 2 of the reply to your query in last issue the words "impurities to the head, etc.," should have been "injuries to the head."

LOSING FEATHERS, AND DROWSY.

J. W.—It is quite possible for the irritation set up by insect attacks to give rise to the condition you describe, but I am inclined to think there is some other cause at work with your bird. Still, to be quite sure about the insects, thoroughly examine the cage to see if you can discover any trace of red mites, especially in the corners, and any open joints, crevices, or vacant nail or wire holes. If any are discovered, take the necessary steps at once to eradicate them. Then see that the bird is kept in a fairly comfortable temperature, not necessarily overheated, but see that it is quite free from direct cold draughts or rapid extremes of heat and cold, and do not allow it to hang too near a window, near or over burning lights in the evenings, nor high up near the ceiling. In addition to your present general seed dietary, give a morsel of bread and milk slightly dusted with flowers of sulphur and sprinkled with soft sugar every second day for a fortnight, and on the alternate days add to the drinking water ten drops of lemon juice and as much chlorate of potash as will cover a sixpence. At the end of the fortnight stop the above medicine, and give instead four drops each of dilute sulphuric acid, tincture of steel, and tincture of gentian two days in every three for a week, and afterwards every second day until the feathers have quite ceased dropping.

CANNOT GET NOTES OUT.

Fishing Fred.—See that the bird is kept in a pure atmosphere, in a fairly comfortable temperature, and not exposed to direct draughts or sudden fluctuations of temperature. It may be rather more susceptible than the other birds in the same rack to these influences, which would explain why this bird and not the others is affected in this way. The following treatment, together with the milder conditions which we may hope will come about soon, should quite set matters right. Give a morsel of bread and milk with two drops of cod liver oil emulsion on it, and sprinkled with soft sugar every second day for a fortnight or so, and on the alternate days add to the drinking water ten drops of lemon-juice and as much chlorate of potash as will cover a sixpence, and during the time also keep a morsel of the paste mentioned in last portion of reply to "T.W.B.H." in last issue, stuck in the wires for the bird to peck at when it likes.

LUMP ON NECK.

S. H.—You ought to have described as closely as you could the appearance of the substance, and said whether there is any heat about it or the appearance of any fluid contents. It is possible that it is an accumulation of air due to the rupture of an air sac, in which case it would appear much like an air-blown skin bladder and the passage of a clean, rather coarse needle through it would be all that is necessary to let off the air, when the swelling would disappear. Should there seem to be any fluid contents, you may still pierce it with a clean needle and gently press out the contents that will come away readily, then bathe clean, dry, and touch the spot with a drop of tincture of benzoin on the end of a small feather or match stick. In either case give a morsel of bread and milk the size of a hazel nut, with two drops of cod liver oil emulsion on it, and sprinkled with soft sugar every second day for a fortnight or so, and on the alternate days add to the drinking water ten drops of lemon juice and as much Epsom salts as will cover a sixpence. At the end of the first week discontinue the latter item and give instead four drops each of dilute sulphuric acid and tincture of gentian every second day in the water.

NOT YET MATED.

J. Webster.—Considering the character of the season so far, it is too early to be anxious about birds not being mated yet. In all probability those which have not yet been mated at all this season will be the most forward at the end of the season. I do not think there is anything at all wrong with your birds except that they are just a little backward, and the following treatment will doubtless put things quite all right in a fortnight or so, by which time it will be far more seasonable to think of mating. Leave the cock in the centre of the three-compartment cage, and give him and the hens a small teaspoonful of egg food, or any substitute you may use, with about half the same quantity of a mixture of equal parts maw, gold of pleasure, and sesame mixed in it every second day. This quantity for each bird. On the alternate days give two or three crisp young leaves of dandelion, which you should find little difficulty in getting now by searching in mild sheltered nooks, under south walls and hedges, or in warm ditches. If the hens appear in good condition in a fortnight or so, and respond freely to the calls of the cock, and he is feeding them through the partition and calling to them, you may try mating him, notwithstanding his silence, which does not necessarily make him any the less reliable as a breeder. It is an idiosyncrasy with some cocks to cease singing as soon as placed close beside the hens.

STARTING A BUSINESS.

Out of Pocket.—I'm afraid I cannot advise you very definitely on the question of taking a shop and starting a business as a dealer in Canaries to dispose of your own stock, and, I take it, any other stock you could purchase for the purpose, as it is not very likely that you could breed enough stock yourself to keep a business in a public market place going on paying lines. It is so largely a question of locality, and the local demand or suitability for such a business, and the cost of its upkeep, and, above all else, your own personality and aptitude for business, that it is practically impossible for anyone not personally acquainted with these details to lay down any hard and fast rules. But to run a shop in the position you suggest would demand a fair amount of business aptitude and acumen, and a large number of birds would need to be handled to make it a paying concern. The chances of success would probably be largely increased by adding the sale of cages and appliances, seeds, foods, and, perhaps, birdy literature as side lines. On the whole, if you had a good class of birds, either fancy or singing breeds, and find yourself out of pocket by selling the surplus stock wholesale, your best plan would be to start methodically to work up a reputation for your strain by judicious showing, and at the same time keep them before the Fancy public by such means as a breeder's card and small prepaid advertisements in our prepaid columns, and dispose of your surplus privately in this way until you felt you had a sufficient clientele to warrant your embarking in a style of business which would entail continuous outgoings and expenses for its upkeep. With regard to your definite questions. (1) The common Canaries which used to be sold at 2s. 6d. per pair in a wicker cage were, in all probability, fed in the nest just the same as the more expensive class of these songsters. These birds were not bred especially to sell at this price, and were practically all hens. The fact that a cock may sometimes be heard of being obtained from these birds does not alter this rule. They were merely the wasters weeded out by the breeders and dealers who evidently considered it more profitable to clear them out at any price early in the season than to keep them over the moult. (2) The age of the birds would vary. The bulk of them would be the young of the season, which would be anywhere between two and four months old, but doubtless old hens rejected for breeding for various reasons would be included in these batches. Neither breeder nor the wholesaler could have considered it a paying business to keep the birds over the moult. (3) One cannot give a really satisfactory answer to this question as to whether you should sell your birds in the nest feather or moult them. If they were a strain of songsters you could not have them efficiently trained soon enough to sell them in the nest feathers, and consequently they would not command the best price. On the other hand, if fancy breeds, you would run a certain risk of selling birds of high typical qualities at the face value for mediocre ones, as no one can tell with certainty how apparently mediocre specimens of well-bred birds will make up after the moult. (4) If properly done, with pure sweet peppers only, there is no risk of killing the young by colour-feeding them in the nest, but there is very little to be gained by the method, and I would not advise it as a regular practice. (5) This will be best answered in the opening remarks. The question of rent and rates, and the amount of capital at disposal, may well be left to decide the matter.

SUNFLOWER SEEDS.

D. J. W.—(1) Sunflower seeds are quite a good substitute for hemp in the feeding of Canaries, and may be given in seed mixtures in the same proportions as hemp, either as a substitute for hemp, or as an addition at the end of the moulting season, and as a substitute at this latter time for the usual supply of linseed, which is given at this time to put a polish on the plumage. Some birds do not care for linseed, and reject it, and in such cases sunflower seed is an excellent substitute, and serves just the same purpose, beside being less objectionable in other ways. To give it, the seeds should be shelled and chopped and added to the seed mixture in the desired proportions. The chopping may be done by passing it through a coarse set seed mill or any similar contrivance. (2) Given strong, robust hens flying loose in an aviary, they are certainly less addicted to egg-binding during the breeding season than those more closely confined in small cages. The extra amount of exercise they are able to obtain is invaluable in combating the tendency to this trouble. But as you had such bad trouble with this complaint last season, it may be that your hens are peculiarly disposed to it by reason of weak health or generally low condition, in which case you can hardly expect the sudden extension of liberty and more vigorous exercise to have the effect of removing all the trouble of egg-binding. The birds really ought to have had the liberty of flying loose in the aviary all through the winter to get the best effect. Do not give these hens dandelion as green food, and give about half a teaspoonful of niger seed per hen every third day from now until the first clutches of eggs are complete. Do not put in an equal number of sexes. One good, strong, vigorous cock is sufficient for three or four hens when all are flying loose.

A LONG MOULT.

Norwich Novice.—You should first make yourself quite sure that the bird is not exposed to sudden fluctuations of heat and cold, such as might occur from being kept too near a fire in the day which is allowed to go out at night, when the position may become correspondingly cold; also see that it does not hang near or over a burning light in the evenings, and if the window is one that opens or admits draughts it is a doubtful policy to place the bird there daily. Choose a fairly bright and comfortable place in the room and keep the bird there without constant removals for the next month or so, and treat as follows. Give a staple diet of three parts canary to one part summer rape. In addition to this give separately every third day a piece of bread the size of a hazel nut, soaked in cold milk, drained, two drops of cod liver oil emulsion on it, and sprinkled with soft sugar. On the intervening days give first a morsel of banana, boiled carrot, or two or three crisp young leaves of dandelion, and next a small teaspoonful of a mixture of equal parts hemp, niger, teazle, white millet, and broken groats, with just a slight sprinkling of yellow mustard in the bulk. Also make a little of the paste named in the last portion of reply to "T.W.B.H." in this issue, and keep a small cube stuck in the wires for the bird to peck at when it likes for a few weeks. In the drinking water add six drops of syrup of rhubarb and as much Epsom salts as will cover a sixpence, for three consecutive days, and after this give instead six drops of dilute sulphuric acid, four of tincture of gentian, and three of tincture of steel

in the water two days in every three until the feathers have quite ceased dropping.

EFFECT OF LAYING.

G. W. T.—The symptoms described are those of a prolapsed oviduct, which, fortunately, was temporary and returned to its normal condition voluntarily. This is by no means always the case, and there will be a certain risk of a recurrence if you breed with the bird, or even if you do not if she should continue laying eggs, though the probability of the latter event will be considerably reduced if she is not mated. In the event of such a recurrence you will find the proper treatment given in reply to "A.W.," under heading "Prolapsus," in last issue.

QUESTION OF PAIRING.

L., Novice.—(1) No, considering the character of the season so far it is none too late to select a pair of birds from the group in the aviary; cage them up side by side, feed up for a week or so, and then mate them if they seem ready to begin nesting. You may quite easily have them mated by the middle of April, or very soon afterwards, which will not be at all unusually late to commence this year. In ordinary circumstances it would certainly have been best to have separated them a little earlier, but this season the circumstances are most exceptional. (2) This question as to whether a Goldfinch-Canary can be mated with a Canary simply means, I assume: Can a Mule be mated with a Canary in the hope of breeding young from them. Without totally denying the possibility of getting young from a Mule parent, the answer is a decided No. It is easy enough to mate them, but the Mule is practically always sterile, and such mating should be done only as a pure experiment, and not with any certain hopes of its being a fertile union.

CAUSE OF DISTURBANCE.

S. W. B.—It depends very much upon the birds themselves and their condition whether the position close beside the aviary in which they have been kept with other birds will prove too much of a distraction for them to settle down to breed successfully in the single breeding cage. If the mated pair are in really good breeding condition the presence of the other birds in the aviary will be of no account at all. But the fact of the cock apparently trying to get back to the aviary probably means one of two things: either he is not yet in very good breeding condition, in which case a little patience may be all that is necessary, and he will soon begin to devote more attention to his intended partner; or, if there are other hens in the aviary, he may already have had intentions of his own towards another eligible female, in which case, if you can detect the favoured Biddy it would be best to remove her out of his sight and earshot for the rest of the season, and in this case it might be an advantage to place some sort of screen between the breeder and the aviary until the mated pair had gone to nest. You can only use your own discretion in a case of this kind as to removing the birds to another place, though if there is another fairly bright and healthy place available, I should be disposed to eliminate the necessity for constant surveillance by removing the mated pair to it at once.

EFFECT OF EGG-BINDING.

Blackie.— (1) I think it is quite likely that the combined effect of painting the abdomen with the oil and then steaming, and possibly allowing the hens to go at once into a chilly cage afterwards has brought about the condition you describe. The treatment for the egg-binding was not quite correct. The steaming was correct, and after this you should have kept the bird quite warm for a few hours until the effect has passed off, but the other treatment was wrong. You should not have given "a few drops" of castor oil; one drop would be a very full dose, and none at all is called for in these cases, and there was no necessity to paint the abdomen with it. The proper treatment would have been to give two drops of a mixture of brandy and water, or glycerine, or castor oil if you wanted to give this substance in equal parts, and dropped one drop of the oil, warmed, on to the vent, or inserted a drop in just the extremity with the tip of a small feather, then steamed and kept warm for a few hours. You can do nothing now but await the natural growth of the new plumage, which may begin at once. (2) The deserted eggs would hatch out in the ordinary course if given to other hens to incubate with their own, provided that they had not been kept too long after laying before incubation commenced. It would be quite safe to give or distribute them to hens that had been sitting for about one day only. Otherwise, keep them in a small box well covered with bran or meal, and give the box a half turn every morning and evening, and they will keep in good condition for sitting for a week or a little over, and may be given to hens as opportunities offer which are just commencing to sit at any time during this interval.

ARE THEY FIT?

W. Johnson.—(1) It is highly probable that these birds have inherited a strong predisposition to bronchial trouble from tainted stock, in which case there is very little chance of them ever being of any use as stock birds, or, indeed, anything but a constant source of disappointment and worry. You may try the effect of the following treatment, but, frankly, I doubt if it will be anything more than a temporary alleviation of the symptoms. Make the staple diet three parts canary to one of summer rape. In addition give separately every third day half a teaspoonful each of mixed seed, and on the intervening days give a piece of bread the size of a hazel nut, soaked in cold milk, drained, two drops of cod liver oil emulsion on it, and sprinkled with maw seed, and next a morsel of banana or boiled carrot, or a good sized spray of green salad in variety as the season advances. In the drinking water add ten drops of lemon juice and as much Epsom salts as will cover a sixpence every second day for a week, and after this give instead four drops each of oxymel of squills, Ipecacuanha wine, tincture of lobella, and sweet spirit of nitre, every second day for two or three weeks. See that the position where the birds are kept is quite free from direct cold draughts, sudden extremes of heat and cold or irritating fumes from burning lights in the evenings. (2) I cannot advise you to breed with these birds at all. There appears too much reason to suspect a badly tainted pedigree to make it worth while running the risk of perpetuating a race of physically unfit birds which could produce only endless worry and disappointment.

DESICCATED EGG YOLK, ETC.

J. S.—(1) The sample sent has all the appearance of desiccated egg yolk, which is the pure yolk of eggs evaporated until only the dry powder is left, [illegible] to imply the place of fresh eggs in making egg food for the rearing of young Canaries. But although this sample undoubtedly contains the egg yolk, there seems to me a foreign flavour, so that I am not prepared to say it is the pure article. If packed by a firm of good repute, you may perhaps take it for what it purports to be. (2) Assuming it to be genuine, the best proportions to use it with bread crumbs would be equal parts on the first day after hatching, and then gradually reduce the proportion of egg until by the fourth or fifth day it was one-third of the whole, and after the first week make it one heaped teaspoonful of the yolk to three heaped teaspoonfuls of bread crumbs, and a slight sprinkling of soft sugar and maw seed might be added with advantage for dainty feeding hens. (3) The mixture as in No. 2 would, in my opinion, be preferable to the prepared food you name. (4) It is not likely that fresh ants' eggs would be of any use at all to assist in the rearing of young Canaries. A stray hen here and there may utilise them to some extent, but they would not be generally acceptable, and the risk of infesting the cages with newly hached ants would make the experiment not worth while.

ABNORMAL EGG.

Wm. Lowe.—It is certainly unusual for a Canary to lay an egg about half the size of a normal one, but it is not what might be called a great rarity. Such eggs usually occur at the end of a clutch, and more often at the close of the season than at any other time, and may indicate exhaustion of the ovaries, either temporary or permanent. My collection of curios in this line contains the egg of a house sparrow, perfectly shaped, well shelled, and with normal marking, which is no larger than a very small pea, much less than a quarter the size of a normal one, which proves that even wild birds are not free from these abnormalities.

BRITISH BIRDS, MULES AND HYBRIDS

Answered by H. NORMAN.

LOSING LINNETS AND GOLDFINCHES.

W. Tullett.—I fear there is something very wrong in your treatment of your birds, and to assist you we asked you for particulars, and although you give us some, you do not give us quite enough. For instance, you say you feed on rape, linseed, and canary seed, but you say nothing of green food or wild seeds, so I presume you do not use them. Neither do you mention the size of your cages, or where you keep your birds. Presuming you purchased them in the winter it would be in the spring or early summer when you lost them, just as they were coming into condition. At this time green food and wild seeds or soaked rape and teazle would be most useful, not only in keeping the birds in condition, but in regulating the bowels and maintaining their general health. I would advise you to have another try, and instead of the mixture you use, try the following (my own Linnets do splendidly on it): Canary 3 parts, teazle 2 parts, rape 2 parts, or if you can get genuine charlock seed use 1 part of this, and only 1 part of rape, and linseed 1 part. During the winter months give them soaked seeds twice a week and as the spring advances vary this with dandelion, chickweed, shepherd's purse, and other wild seeds. Do not keep them in the little hop-cages, but let them have proper Finch cages, measuring 14 or 16 inches. Give a bath on fine days, and do not keep them in a hot room, nor hang them outside in the hot sun for any length of time. Get our Nutshell booklet on the Linnet; also the Goldfinch Nutshell; you will see in them no end of information that will be useful to you. As regards the latter bird, you do not say the proportions of seed you use. In your next venture I would advise you to omit the linseed, and be sparing with the niger, otherwise follow out the instructions in the Nutshell, and then you should have your share of success.

BREEDING WITH GREENFINCHES.

Peter Fletcher.—As a rule, Greenfinches are good breeders when in captivity, particularly when turned loose in an aviary. I do not say that every pair will breed, but if they are young birds and steady your chances are good. Feed them pretty liberally, using plenty of sunflower seed, and occasionally a little hemp, and the more dandelion, groundsel, chickweed, etc., you give them the better. An old Finch nest in one corner of the cage or aviary, and plenty of moss and hair, will help to start them.

NUMBER OF EGGS LAID BY TIT.

T. W. B.—The Blue Titmouse is certainly a prolific producer of eggs, and I have some records by me from which I am able to give you the information you desire, they are notes of clutches found by myself. The lowest is six and the highest twelve, eight occurring more frequently than any other number. A single clutch of eighteen is on record, but there is always the possibility of such an unusual number being laid by two hens.

BULLFINCH WITH CRAMP IN LEG.

L. E. M.—Cramp in the legs is an ailment that often attacks birds that have been caged for some years, and Bullfinches appear to be particularly subject to it. I have successfully treated several cases, and find the following method give relief. Bathe the leg in hot water daily, and gently rub it between the finger and thumb with an oily embrocation, or Old St. Jacob's oil. In addition to his usual food, give a spoonful of soaked rape and teazle every other day, but as soon as you are able to obtain green food you could discontinue this. Give a little hemp and sunflower and about twice a week a half spoonful of egg food. As the season advances feed him on all kinds of wild food and fruit. A little Epsom salts occasionally is certainly good for him, and if given in rather small quantities, acts as a mild aperient and is stimulating, the dose would be 10 grains in four tablespoonsful of water. I would advise you to discontinue the bath, anyway until the bird has somewhat recovered and the weather is more congenial. I fear you can do nothing for him except by handling, no birds like it, but are not much troubled, if one has confidence, and catches them quickly, without hesitation.

FOREIGN BIRDS.

Answered by WESLEY T. PAGE, F.Z.S.

PARROT BREATHING HARD.

Mrs. W. B.—Give a teaspoonful of fluid magnesia in the water every fourth day, and on the intermediate days put in the water one teaspoonful of the following mixture: Ipecacuanha wine, oxymel of squills, and glycerine in equal parts. As soon as the breathing is easier give chemical food in lieu of the mixture. Only a china crock or glass drinker must be used while giving drugs. Bathing the nostrils with a dilute, tepid solution of glycothymoline will soon check the running at nostrils. To keep its mouth and throat clear give honey and borax daily, thinly spread on bread, biscuit, or plain cake, or anything similar the bird will eat. If it becomes at all thin as the result of its indisposition give cod liver oil emulsion in the same manner as the honey and borax till it is in condition again. Your dietary is satisfactory, but a pint each, by measure, of white oats, sunflower, safflower, and hemp seeds would be better than what you are giving as extra to the canary seed. And if the bird will eat it, a portion of white millet would be a very wholesome addition to the canary seed. Do not omit to keep cuttlebone and parrot grit in the cage, also a chunk of wood for it to exercise its mandibles upon. Report progress a month hence.

WHAT BIRD

F. Jackson.—I regret I cannot name your bird off hand, apparently it is one of the Tanagridæ, in which case its principal dietary will consist of fruit and insects, insectile mixture and milk sop, with canary seed for such species as care to partake of same. At the same time it may be one of the Tyrannidæ, the diet would be similar to above, but the supply of live insects should be greater. I am keeping your description by me, and hope to name it definitely for you after the Easter recess. It would help me if you would complete your description—you give no description of the colours of the upper parts save the head, and your description of the wings is only partial, if you will fill in these gaps it will materially help me in correctly naming its species.

HOW TO BREED LOVEBIRDS.

F. A. Morris.—Your Yellow Lovebirds are Yellow Budgerigars, and if you have male and female their successful nesting should be merely a matter of time for them to settle down and get into breeding condition. When in breeding condition the cere over the nostrils is bright blue, that of the hen anything from pale cream colour to ruddy brown. Hang up another husk, so as to allow them to do a little choosing. As soon as you can get it free from frost supply them with as much as they will eat of flower and seed heads of any of our indigenous grasses. In addition their menu should consist of canary and white millet seeds, and millet sprays (millet in the car). When they are feeding young supply broken biscuits and crushed oats in addition. Of course supplies of grit, cuttlebone, and water must be continually kept up. Though this species does not as a rule resent examination of contents of their nest receptacle, yet it is not wise to be too curious till the birds are thoroughly at home and have brought off their first brood.

COCKATIELS AND BUDGERIGARS IN SMALL AVIARY.

Hargreaves.—Your so-called aviary is merely a large cage, of the Crystal Palace type, and you have bought sufficient birds to stock an outdoor aviary, 15ft. long, 6ft. wide, and 7ft. high. Again, if you are to have any luck the sexes must be equal, unmated odd birds usually spell conflict and failure. I am not numbering replies, as your two queries are merely two alternatives. I advise in your large dome-topped cage, either one pair of Cockateels, or two pairs of Budgerigars. In your smaller cage there should be a strong probability of a pair of Budgerigars breeding. Have you a spare room? If so put a wire-netting screen over the fire-place and window, and cover up all woodwork with fine mesh wire-netting, and the floor with linoleum; fix some large tree branches in tubs or large pots, and turn the birds lose into the room. Sand must be scattered over the top of the lino., and several food receptacles arranged about the room. Three or four nest boxes with concave bottoms must be put up for the Cockatiels, and two husks for each pair of Budgerigars. So accommodated your birds would give you infinite pleasure. The only alternative to fixing up such a room, putting up a garden aviary, or procuring more cages, is to part with some of your birds. Neither a garden aviary nor fitting up a room need prove costly, and either would be far more satisfactory than cages, and require much less time for attendance. If you fit up a bird room it would be well to insert a pane of glass in place of one of the door panels, but all the glass, whether in bird room or aviary must be covered with small mesh wire-netting. While using cages use natural branches as perches, these are better for the birds in every way, and are easily replaced.

PARROT WITH DIFFICULTY IN BREATHING.

T. Potter.—You had better get our Nutshell, "The Grey Parrot," 2½d. post free from our manager, it will give you full instruction as to dietary, etc. Get your bird on to the dietary given therein as soon as you can without too sudden a change. Put one teaspoonful of Dinneford's magnesia every fourth day into the drinking water, for a month at least, and on the days you are not giving the magnesia put the same quantity of this mixture: Ipecacuanha wine, oxymel of squills, and glycerine in equal parts, in the water, till the breathing is easier. Give the bird honey and borax, also cod-liver oil emulsion daily (not both together, but at different intervals) thinly spread on biscuit, bread, or plain cake, whichever the bird will eat most freely. Keep cuttlebone, and Parrot grit continually in the cage, also a chunk of wood for it to exercise its mandibles upon. Do not give any tea, coffee, or milk sops, table scraps, nor any kind of animal food. Report progress a month hence.

A CORRECTION.

In my reply to A. G. Pearson, "Amazon with discoloured plumage," a printer's error occurs: The fluid magnesia should be given once or twice weekly, not daily as printed.

AILING COCKATOO.

Miss D. Carter.—Glad to note so great an improvement. Continue the treatment until the bird is quite fit. Honey and borax ready mixed is stocked by all chemists at a few pence per box, and given as directed, it would greatly benefit your bird.

WHAT PARRAKEET?

Forfar.—I think your bird must be the Quaker or Grey-breasted Parrakeet, and the value of an acclimatised specimen would be about one guinea. The grey of the breast and throat is light in colour, and the "cross" markings quite faint I can fit your description to no other species, and am decidedly of the opinion that it is correctly named as above.

BREEDING RED-HEADED FINCHES AND JAVA SPARROWS.

S. W. B.—Canary and white millet seed, millet spray, green food, water, and grit should form the regular menu of these birds, and two or three meal worms per bird, per diem, should bring them into fit condition for breeding. I regret to be compelled to say that there is nothing you can do to save the cock plucking the hen save separation, though this probably arises largely from the desire of the cock to drive his mate to set up house-keeping, if I may use that expression. It is also probable that as soon as she commences incubation the cock may leave her alone and may not again molest her after the brood has been reared. I do not remember to have heard of Java Sparrows breeding in a Crystal Palace aviary, but there is no reason why they should not do so, as both the grey and white varieties have been bred in box-type cages. Your success would be most probable with the white variety, or with the two varieties cross-mated, viz., a Grey cock and a White hen; the progeny from such a union would be mostly pure greys, but what few pied birds are produced are usually very pleasing and handsome.

MUST ITS TONGUE BE CUT?

H. W. B.—Most emphatically, no. The fallacy that birds should be subjected to this barbarous practice certainly dies hard. The Rose-breasted Cockatoo is an Australian bird, not an African species as you erroneously think. The minority of the large numbers of this species which reach this country make talented talkers, but the majority talk but little or not at all. As you have a young bird, which is now quite tame it should talk, at any rate to some extent. Pet it and talk soothingly to it while you are attending to its wants, and whenever it is quiet and restful teach it by the constant repetition of any short sentence you would like it to repeat. It should also pick up words, short phrases, calls and cries which are uttered in its vicinity. They are friendly, chummy birds, accomplished acrobats, also very handsome, and interesting pets. Ite your Amazon, the Blue-front usually talks well, but it is a matter of time and patience, and the method of teaching is as above. I do not expect the discoloration will pass till the next moult. Guiana Lovebirds have not yet been bred in captivity in this country, but a near species, the Blue-winged, has bred in a cage, so why not the Guiana? The latter has not been at all freely imported into this country, and only a few attempts have been made to breed it, one of which nearly attained success. It has laid eggs in a cage.

HAND REARING YOUNG BUDGERIGARS.

J. Aitcheson.—A talking Budgerigar is the exception and not the rule; personally I have not attempted to hand-rear them, but the following method was successful with Black-cheeked Lovebirds, whose treatment is the same as Budgies, therefore I see no reason why you should not succeed by following the same method. The young were taken from the nest, while quite young, and bare of feathers. The chief difficulty was on the first day to get them to take food, after that it was very simple, and the fledglings soon learned to take the food themselves from the dish. The food, given very sloppy at first, consisted of Osborne biscuits and crushed wheat, varied with soaked "Uveco" and creamed wheat. Till they were able to feed themselves they were fed from a spoon, simply pouring it down their throats, of course only a little at a time. The great difficulty is keeping the right temperature, neither too hot nor too cold—the birds referred to (eight were so reared in one season) were kept in a basket which was placed on the bath-room cylinder. Feeding commenced at 6 a.m., and was continued at short intervals till late at night. They took readily of millet seed as soon as able to crack same.

POST MORTEMS.

Mr. G. Yates, M.R.C.V.S., 1, College Road, Harrow, Middlesex, will examine and report upon dead cage birds for a fee of 1s. 6d. each bird; for reply direct, 2s. 6d.; analysis, 21s. The Post Office regulation is that bodies of birds must be sent at the letter rate of postage, and must be packed in hermetically-sealed receptacles which must themselves be enclosed in strong wooden, leather, or metal cases. If this regulation be infringed the packets may be destroyed by the authorities. **Any bodies sent to the office of this paper will be thrown away, and** if a fee is enclosed the loss will be the sender's.

GENERAL.

Answered by THE EDITOR.

A RABBIT SHOW.

F. Tottle.—Kindly note that announcements of shows other than cage-bird shows cannot be made in our columns. Also please forward your address, so that a supply of club notice cards may be sent to you.

MULE OR HYBRID?

T. S. W.—It is a very open question indeed whether crosses between British birds would be eligible for competition in a class headed "Mules, any variety." We have explained many times that in the vernacular of the "fancy," a "Mule" is understood to be a bird one of whose parents is a Canary. If you exhibited in such a class a bird which had not a Canary for either of its parents, the judge might pass it for the reason stated. If he awarded it a prize, a protest would be pretty certain to be raised. Such a protest, however, would not hold good, for the decision of the judge is final except in cases of fraud subsequently discovered. You are therefore entirely in the hands of the judge, and if he "passed" your bird as being ineligible he would be only acting up to the conventions. In our view the distinction is a ridiculous one, and the world "Mule" as applied to a bird is entirely misused, but it obtains, and until it is abolished exhibitors must abide by it. One trouble is that the compilers of the schedule do not always know of these subtle differences, or, if they do, they do not take sufficient trouble with their class heads. In your case, for instance, if the heading had been "Mule or Hybrid, any variety," or "Canary Mule, any variety," there could have been no question as to its proper meaning.

THE POULTRY WORLD.

The up-to-date, efficient poultry journal. Every number grandly illustrated and full of practical articles by experts. In valuable for the beginner and the amateur.

Every Friday, 1d.

Advertisement Forms & specimen copy from "POULTRY WORLD," 154, Fleet St., London, E.C.4.

Advertisements continued from page 196.)

LADIES BLANCHARD'S PILLS

Are unrivalled for all Irregularities, &c., they speedily afford relief and never fail to alleviate all suffering. They supersede Pennyroyal, Pil Cochia, Bitter Apple, &c.

"BLANCHARD'S are the Best of all Pills for Women."

Sold in boxes, 1/1½, by BOOTS' Branches, and all Chemists, or post free, same price, from

LESLIE MARTYN, Ltd, Chemists, 34, DALSTON LANE, LONDON

Free Sample and valuable Booklet, post free, 1d. Stamp.

A POST CARD ONLY You cannot hold your own in life's battle if weak, worn, or easily faded. Periodical attacks of moodiness, languor, dospondency, depression, and groundless fears mean nerve troubles and lead to brain fag, impaired memory, and unfits one for study, business or pleasure. The chosen ones in every walk of life are the alert, the bright, and the intelligent, nature's natural gift, but marred for lack of a little knowledge. A post card to the Useful Knowledge Publishers, P.O. Box 94, Bradford, will put you in possession of a 48-page book, neatly bound, of valuable information, and will be sent post paid free of any charge whatsoever if you will mention CAGE BIRDS. A little knowledge saves much medicine. [Copyright.

NOTE TO READERS.

AIDS TO SUCCESS.

Our Books and a Common-sense Application of the Advice therein MUST bring you Profit as well as Pleasure.

All the experience of years of careful study by experts is at the disposal of readers.

YORKSHIRE CANARIES, 2/2.—By H. W. Battye (Past President of the Yorkshire Union). Absolutely the very best Handbook dealing with the Yorkshire and its sub-varieties. Contains complete instructions upon Pairing, Breeding, Moulting, and successful Exhibiting, also how to treat in both health and disease.

NORWICH CANARIES, 1/1.—By C. A. House. Tells the fancier all that he needs to know to enable him to become successful as a breeder, and exhibitor of the Norwich Plainhead. The chapters on "Forming a Stud," and "How to Produce the Ideal" are worth the cost of the whole book.

THE SECRETS OF HYBRID BREEDING REVEALED AND EXPLAINED.—By many notable Mule and Hybrid Breeders. Among the contributors are such well-known breeders as Messrs. R. Colton, W. H. Vale, C. Houlton, C. J. Ward, J. Beswick, G. Lander, T. H. Kinch, T. Smith, etc. This Handbook, which contains 212 pages, 7 inches by 5, is brimful of the most practical information on the highly interesting subject of Hybrid Breeding. Price 1/-, post free 1/2.

AVIARIES, BIRD-ROOMS, AND CAGES, 2/3 (cloth gilt).—By H. Norman. Contains ten lovely full-page photographic plates. A practical guide which deals thoroughly with the proper Building, Fitting, and Management of Aviaries and Bird-rooms, and the making of Cages.

SEEDS, FOODS, AND WILD PLANTS FOR CAGE BIRDS, 1/2. — By various leading authors. Full information on the seeds suitable for all cage birds, their food values, uses, etc., with descriptions and illustrations of the wild plants indispensable to the successful keeping of British and other birds.

BRITISH BIRD MANUAL, 2/3 (cloth bound).—By H. Norman; or may be had in two parts. Part 1: "Hardbills," and Part 2. "Softbills." Either Part, price 1/1, post free. Each part contains a beautiful and life-like coloured plate and numerous illustrations of birds and cages. Up-to-date information on the keeping of British Birds.

HOUSE'S CANARY MANUAL, 1/2.—By C. A. House. A thorough, practical guide to the general management and breeding of Canaries, dealing fully with the breeding, etc., of every member of the Canary family, including the Roller (or Singing) Canary. An illustration of each bird, by the master Canary artist, Mr. H. Norman; exhaustive chapters on aviaries and cages, breeding procedure, moulting, exhibiting, diseases, and seeds—a compendium of knowledge.

FOREIGN BIRDS FOR BEGINNERS, 1/1½.—By W. T. Page, F.Z.S., etc., Foreign Bird Expert to "Cage Birds." A highly instructive Manual. It contains a magnificent coloured plate and a number of black and white illustrations. Indispensable to all keepers of Foreign Birds.

CANARY BREEDING FOR BEGINNERS, 7d.—By Claude St. John. A Practical, up-to-date guide to Canary breeding, designed specially for the use of the beginner. Deals very fully with the choice, sexing, and mating of the birds, feeding for condition, the cages and their fittings, the bird-room, egg-food, nest-building, rearing and moulting the young, colour-feeding, training for show, and all the difficulties likely to confront the breeder.

THE STOCK BOOK, 7d.—Of our invaluable "Breeding Room Register" a well-known fancier has said:—"It makes bird-breeding easy." No breeder of birds can possibly afford to be without it. It simplifies the operations in the bird-room and makes it possible for everyone, even the veriest novice, to breed his birds as they should be bred. Contains both Pedigree, Breeding, Young Bird, and Show Registers of simple and unique character, in addition to useful account pages.

FANCIERS' PRINTING.—Fanciers requiring business notepaper, postcards, trade envelopes, etc., should write us for a quotation. We are now in a position to supply these at specially low rates combined with first-class work. Artistic memos., with block of any desired bird, and fancier's name, address, and words of description as desired. 250 5/-, 500 7/6, carriage paid.

CAGE-BIRD HYBRIDS.—Complete bound in cloth, 7/6 carriage paid. This great work is written by Charles Houlton, an authority with a reputation extending over 25 years as a leading exhibitor and a leading expert and judge. Magnificently illustrated by that great bird artist, H. Norman. There are no less than sixteen coloured and sixteen art plates in this work. Each plate is a perfect study of an individual Hybrid.

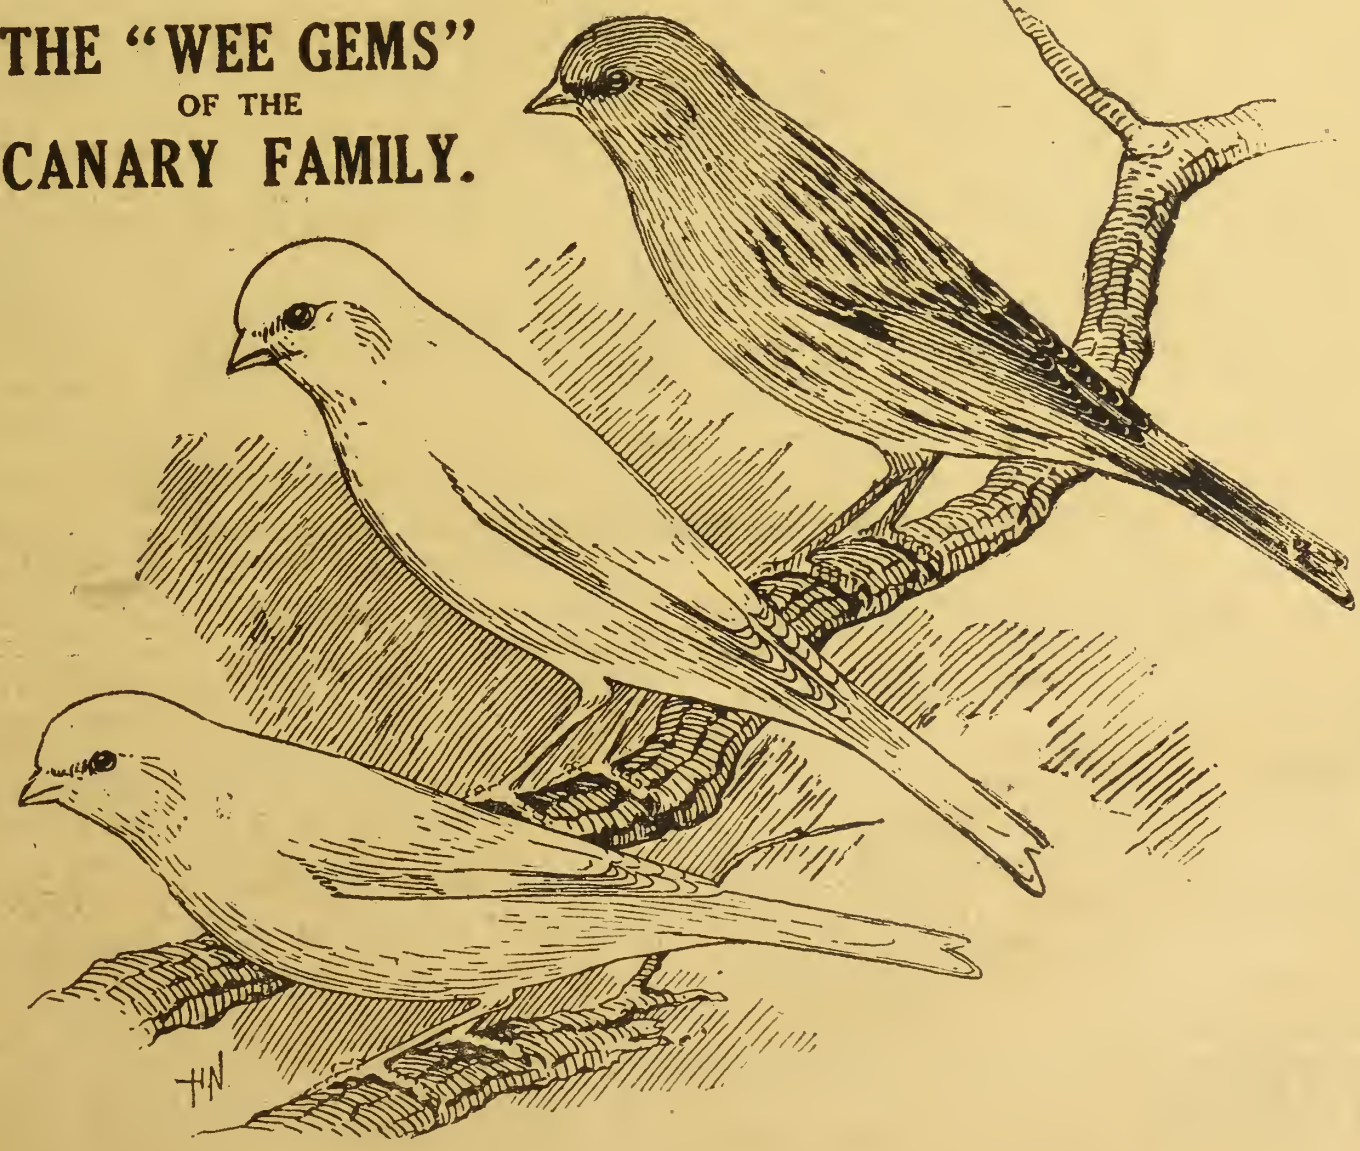
THE "WEE GEMS" OF THE CANARY FAMILY.



The charming little Canary known as the "Border Fancy" has justly been styled the "Wee Gem," and our picture well shows the dainty grace of this the smallest of all Canaries. The bird at the top is the Yellow Green Border which won 2nd in its class at Llanelly Show for Mr. T. H. Nelmes, Blaenavon. In the middle is the Yellow Cock which also took a 2nd Prize at Llanelly. It is owned by Mr. E. J. Evans, Neath. The other is the Yellow Border Hen, winner of 1st Prize at Cardiff Show for Mr. M. Tranter, of Barrow-in-Furness.

F. CARL, Publisher, 154, Fleet Street, London, E.C., 4.

Advertisement Charges.

One Halfpenny for each word up to 48, 1d. per word afterwards. Name and address to be reckoned. Maximum, 12 words 6d.

IMPORTANT NOTE.—Two or more Advertisements coming from the same advertiser, even if sent in different names, are reckoned together, and are charged at two words a penny up to 48 words; after that 1d. per word. No single advertisement, even if accompanied by others, will be charged at less than the minimum price, viz., Sixpence.

Headlines or Footlines, 9d. 1/-, 1/6, 2/-, 2/6, according to size.

The rate for displayed advertisements is 7/6 per inch. Rates for a series on application.

ADVERTISEMENTS UNACCOMPANIED BY CORRECT REMITTANCE WILL NOT BE INSERTED.

Postal Orders must be sent as far as possible. All moneys should be made payable to F. CARL.

The Proprietor reserves the right to refuse any advertisement, or to cancel any advertisement ordered for a series, at any time, without assigning any reason for so doing.

Advertisements must in all cases bear the bonafide name and address of the advertiser, and no advertisement will be inserted if addressed to a receiving office, or similar place of call.

Advertisements close Tuesdays first post in each week, and should be sent to the Advertisement Manager, CAGE BIRDS, 154, Fleet Street, London, E.C.4. Terms for Display Advertisements on application.

ALWAYS USE "CAGE BIRDS" DEPOSIT SYSTEM.

We are not responsible for the statements made in advertisements, nor of the *bona-fides* of either buyers or sellers in all transactions the adoption of our Deposit system should be insisted upon

RULES.

1.—PROCEDURE.—The intending purchaser should send to this office the amount of the purchase (our deposit fee included), and at the same time he should communicate with the seller stating what it is he requires sent on approval. We acknowledge receipt of the deposit to both parties. In all cases the depositor should give his name and address, and also that of the vendor, and must write same clearly and distinctly.

2.—END OF TRANSACTION.—The deposit is retained by us until we hear from both parties that the transaction has been completed. If a sale has been effected, we hand the amount deposited to the seller. If a sale has not been effected, we return the amount to the depositor. The transaction must be conducted by the parties themselves. We merely hold the deposit.

3.—AMOUNT OF COMMISSION.—The fee is 6d. for each £1, or fraction of £1, and it must be sent at same time as the deposit.

4.—IMPORTANT POINTS.—The depositor must decide within forty-eight hours of the receipt of the goods whether he will keep or return the same, unless, that is, some other period of approval (of which we must be advised) is agreed upon by both parties. The depositor must at the same time notify us of the fact that he has returned the goods. If the goods are not returned within the said forty-eight hours, we reserve the right to send the deposit to the seller after the expiration of that period. And should the seller fail within three days to notify us of the receipt of his goods back again, the transaction will be treated as ended, and the deposit will be returned to the depositor.

5.—A SATISFACTORY PURCHASE.—When a transaction has been completed to the satisfaction of both depositor and seller, both parties must at once return the deposit receipts as a guarantee of its completion. The depositor must at the same time instruct us to pay over the deposit to the seller.

6.—GOODS ALREADY SOLD.—If the goods are sold before our deposit note reaches the seller, or if for any other reason he declines to do business, he must at once return the deposit note to us. Failing its receipt, we reserve the right to return the deposit to the seller after the expiration of three days.

7.—FRESH TRANSACTION.—In case no sale be effected, a deposit is available for purposes of a fresh transaction, provided another deposit fee be paid.

8.—GOODS IN TRANSIT.—Goods in transit are at the seller's risk, and any damage or loss sustained on the journey must be borne by the seller. But goods not approved of must be properly packed and returned by the same means as were used in sending the same.

9.—PAYMENT OF CARRIAGE.—The payment of carriage must be a matter for arrangement between the vendor and depositor. We do not undertake to settle disputes affecting questions of carriage. But in the absence of other arrangements the purchaser is liable for the carriage of the goods, and if the goods are sent on approval and returned, each party pays the carriage one way.

10.—DISPUTES.—In case of a dispute, the decision of the Editor is final.

IMPORTANT.

SEND THE FULL COMMISSION.—If the full commission does not accompany the deposit, the vendor will not be notified of its receipt until the amount deficient plus the extra postage incurred has been paid to us.

HOW TO REMIT.—Under no circumstances will Cheques or Post-dated Money Orders be accepted as deposits. Uncrossed Postal Orders must be sent and the numbers taken for safety.

NOTICE TO BIRD PURCHASERS.

It is advisable that all newly-purchased birds, especially foreign birds, be kept isolated from established stock for a week or ten days, until by their condition they establish the fact that they are thoroughly healthy

Not Singing

If you have any birds you are relying upon for the breeding season that have gone into Soft Moult, we Guarantee you a perfect cure.

DITCHFIELD'S TONIC DROPS

are a certain cure for loss of voice, soft moult, slow moult, going light, feather plucking, and inflammation of the bowels.

DITCHFIELD'S FAMOUS REVIVO

is absolutely unequalled for giving new life and vigour to the birds, and for producing that smart tight appearance of the plumage so much desired by all fanciers.

These two Medicines, given on alternate days, will bring any bird into breeding condition.

DITCHFIELD'S SPECIAL LUNG TONIC

the grandest medicines ever introduced for chest and lung affections in cage birds. Can be given with absolute confidence to the most weak or delicate birds. All medicines can be given in the drinking water, and the birds take them freely, with marvellous results.

All the above remedies are sold in 8d., 1/2, and 2/2 bottles; two 8d. bottles for 1/2, two 1/2 bottles for 1/11, or three for 2/8. P.S.—The 1/2 bottles are treble the 8d. size. All orders sent per return, post free.

GREENS, Norwich and Yorkshire cocks, 20/- each; Borders, 21/- pair: Walker, 197, Great Homer-st., Liverpool. (909)

WHERE THEY ARE!

That is a statement that cannot be denied, for I hold what I offer—not a paper stock. Yet, to be realised fully in what quantities, and the quality in very many cases, they must be seen; and this, by responsible persons, they can be. Also, all are sent on approval.

Before Deciding Elsewhere

send for my current price list. It will be sent you post free, and, remember, it includes almost all varieties. As present prices go, you will in most cases find the birds listed are not only lower in figures, but better in quality than can usually be obtained now, or full particulars of any bird sent upon receipt of stamped envelope.

KNOWLEDGE IS POWER.

You can get it in 6d. Vols.

READERS of "Cage Birds" can to-day secure at pre-war prices volumes of the well-known **"Everybody's" Series.** Each volume is, on its particular subject, the handiest and best book obtainable. Although small enough to fit one's pocket, each book is packed with a vast amount of valuable information. Consider the wonderful price—only **6d.** each (8d. post free), strongly bound in cloth; in attractive leather binding, **1s.** each (1/2d. post free). The number of these books is very limited, and owing to the enormous increase in the cost of printing and paper, it will be impossible to reprint them at present prices. There are sure to be some of these books that YOU need—some that will give you just the information you have been seeking on some knotty point. Send in your order **NOW.** It is only necessary to state the *Number* of each book as given opposite the name in the list shown here.

1. Everybody's Guide to Poultry-keeping.
2. Everybody's Guide to Carpentry and the Doing-up of the House.
3. Everybody's Homa Dressmaker. (7d. only.)

NOTICE TO READERS.

In view of the large amount of business done between our advertisers and readers, and to ensure satisfactory transactions, attention is directed to our deposit system, particulars of which are given at the top of first advertisement page.

REMEMBER I INVITE YOU

to come at any time and inspect my rooms and stock. Whether you desire to make a purchase or not makes no difference. My rooms are always open (every day but Sunday). You need not announce your visit—just come and you will be sure of a hearty Yorkshire welcome. If you wish to see me personally, however, it is best to drop a P.C. in advance. If you should require one or more birds, I have a splendid collection of stock birds, exhibition birds, and songsters, and I invite you to come and make your own selection.

If you cannot come, however, **remember I will gladly send one or more birds to any address in the United Kingdom on 7 days' approval at my sole risk.** If not satisfactory in every way the birds can be returned, and I will return cash in full; or, if preferred, other birds will be sent for approval. Is it possible to make a fairer offer?

I am now offering a limited number of grand stock and exhibition birds, either Yorkshires or Norwich, which I can guarantee as bred from my own **Bulldog Strain,** at 20/-, 25/-, 30/-, 40/-, 50/- each, cocks or hens. Also a few grand matched pairs at 40/-, 45/-, 50/-, 60/- per pair upwards. These are splendid value and have only to be seen to be appreciated.

I have also a grand selection of stock birds from other well-known strains, as follows:—

YORKSHIRE COCKS, grand lengthy birds, in full song, 15/-, 17/6, 20/-, 25/-, 30/- each, upwards.
YORKSHIRE HENS, smart, racy, typical hens, 10/-, 12/6, 15/-, 20/- each, upwards.
MATCHED PAIRS. 25/-, 30/-, 40/-, 50/-, 60/- per pair upwards.
NORWICH PLAINHEADS. Grand, thickset, cobby birds at same prices as Yorkshires.
BORDER FANCIES, Real good birds, both for stock and exhibition. **Cocks,** 15/-, 20/-, 25/-, 30/- each. **Hens,** 7/6, 8/6, 10/- each. **Matched Pairs,** 17/6, 20/-, 25/-, 30/-, 40/- per pair.
CRESTS AND CREST-BREDS.—A few real good pairs at 30/-, 40/-, 50/-, 60/- per pair. Odd birds, Cocks or Hens at proportionate prices. **Matched Pairs for Mule or Hybrid Breeding,** 15/- pair.

ROLLERS. ROLLERS. ROLLERS.

I have a magnificent collection of pure British Rollers from the best and purest strains, at following prices:—

HIGHLY TRAINED COCKS, 25/-, 30/-, 40/- each.
PURE-BRED HENS, including some real good birds, B.R.C.C. rung, 7/6, 8/6, 10/- each.
MATCHED PAIRS, 25/-, 30/-, 35/-, 40/-, 50/- per pair.
Travelling cages 4d. extra in all cases.
SPECIAL NOTE.—As all parcels have now to be sent carriage paid, 6d. extra should be enclosed with order to cover cost of carriage.

One word more—**Please remember, I invite you** to come on any day but Sunday, and make your own selection, but if you cannot come, **Don't Forget** that I send every bird on 7 days' approval, at my sole risk. I personally select every bird that is sent away. I have a very large stock of birds in my rooms at the present time to select from, and I guarantee to give absolute satisfaction to every customer or return cash in full. Terms: Cash or deposit with Editor.

Send for 1917 Price List.

NOTE.—Secretaries will greatly facilitate the work of ourselves and our printers, if they will kindly endeavour to send their reports as nearly as possible as they see these accounts printed, and if they will also write the names of exhibitors as distinctly as possible.

HORNSEY & WOOD GREEN C.B.S.

Table show of British and Foreign birds, Nightingale Hotel, April 4, Mr. G. Gardner judged. Twenty-three birds staged, and we were sorry Mr. Stephens did not send his team. Mrs. H. L. Huggins won special best exhibit with a lovely Green Budgerigar of her own breeding, the judge remarking that it was a bird to be proud of. Goldf.: 1, Waldock; 2, Griffin; 3, hc, c, James; vhc, Miss Smith. Linnet: 1, Martin; 2, Griffin; 3, Twilley; latter would have won, but had some tail feathers short. Bullf.: 1, Miss Smith. Greenf.: 1, Miss Smith; 2, Griffin; 3, Twilley. A.O.V.: 1, Mrs. H. Huggins; 2, Twilley; 3, Griffin. Mules: 1, Martin; 2, James. For.: 1, 2, 3, 4, Mrs. H. Huggins. Three new members were enrolled. Chairman announced that the Sec. had been successful in obtaining a great reduction in the rent under the new proprietor, Mr. Mathews, who is a genial host, and the rent is paid up to the end of 1917; so if members will support the club as much as possible in these very trying times and roll up with new members for the gold-centre medal, we hope to have a record year. Mr. J. Robson's lecture on "Hybrid Breeding," on May 2, should be well supported, as there is sure to be something to learn. Points stand as follows: Olley 34, Martin 24, Griffin 22, Mrs. H. Huggins 22, Tichener, Leach and James 11, Miss Smith 9, Twilley 7, Waldock 6.—C. G. Martin, Hon. Sec.

Club Reports.

NEWCASTLE-ON-TYNE E.E. C.B.S

Meeting, March 28, Blue Bell Inn, Shield Road. Members elected: Messrs. Slater, J. G. Wright, and R. Wilson. Annual show date fixed for Nov. 24. There were several names mentioned as judges, but on account of the small number present it was decided to hold over the question of judges until next monthly meeting.—Ed. Coltman, Sec.

CLAPHAM C.B.A.

Meeting, April 3. The medals won last year were given to such of the winners who attended. Afterwards the members listened to some remarks of the writer's regarding British Buntings. It was intended that a discussion should follow the address on Buntings, but unfortunately time did not admit of this being possible.—A. R. Coe.

MANCHESTER & N. COUNTIES.

General meeting and lecture, March 26, Deansgate Hotel. The classification for table show of British Mules and Foreign at next meeting night, April 16, was drawn up as follows: Goldf. or Bullf. Ck., Greenf. Ck., Linnet Ck., Siskin, Redpoll, or Twite Ck., A.O.V. Ck., British Hen, Mule or Hyb., Muling Pairs, Foreign. The rest of the evening was left to the disposal of Mr. Johnson to give his lecture on "Inbreeding," which was very interesting and caused some interesting debate. The meeting closed with a hearty vote of thanks to Mr. Johnson. —J. Green, Hon. Sec.

BLAYDON-ON-TYNE C.B.S.

Meeting, Smoke Room, Wesleyan Church, James Street. Mr. P. Lynn presided over a good attendance. Several alterations in the rules of the society were made, and Sec. had to seek quotations for printing same. New member elected, Mr. Clarkson, Pelton Fell. If any fancier who wishes to join our society will send his name to the Sec., he will be nominated. Decided to have a Nest Feather show, date and time to be settled at next meeting, May 5. Mr. Geo. Dobson was asked to give a few items of his experience as to the feeding of cage birds, and this he consented to give. The business closed with a vote of thanks to the Chairman.—J. J. Walker, Sec., 7, Middle Court, Blaydon-on-Tyne.

NELSON ROLLER C.C.

At a well-represented meeting, April 5, the Federation rule, No. 6, came up for discussion, and was freely debated on. Letters were read for and against, and it was carried unanimously that the Secretary write to Mr. Best, Sec. of the Federation, requesting him to call a meeting of delegates of all federated clubs, when the Nelson R.C. will vote for the abolition of Rule 6, and recommend the following rule in its place: "That no bird shall be allowed to compete at any federated club show in young bird classes unless wearing the Federation ring." The Nelson R.C. will stand by the decision of the majority of federated clubs. After business a very pleasant evening was spent. Mr. James Lyons, of Blackburn, was with us and birds were present. The song tours were very ably explained by Mr. Lyons, and a very interesting and profitable evening was spent. A hearty vote of thanks was given to Mr. Lyons, who suitably responded and promised to come again. He very kindly accepted membership of the society at our invitation.—J. Earnshaw, Sec.

"Food."

THE GREAT NEW NATIONAL WEEKLY.

A practical journal which shows how to grow our own food.

The profitable rearing of Poultry and animals which help to fill our food bill is dealt with each week, and invaluable advice is given to those who have started to produce home-grown fruit and vegetables.

No one with a garden, large or small, should be without this wonderful penny-worth, and the small holder will find in it a veritable treasury of practical knowledge.

Every Thursday 1d.

Advertisement forms and specimen copy sent post free on application to "Food" Offices,

154, Fleet St., London, E.C., 4.

ACCRINGTON C.B.S.

Meeting held April 4, Crown Hotel, Mr. Harwood presiding over a good attendance. Two new members were enrolled. Decided to hold F.F. show, June 23. During the evening Mr. W. Crawshaw showed the company how he prepared his egg and bread, and also gave a few hints on using samo. Mr. A. Hirst also gave a lecture on the general management of birds, which was very instructive. He also brought several appliances, which he fully illustrated to all present. A discussion on several items brought an enjoyable evening to a close.—Wm. Parkinson, Sec.

PORT GLASGOW C.B.S.

Meeting and show of Britisb, April 6, Co-operative Halls; Mr. S. McKay presided over a large attendance. The following new members have been elected: J. Brighton, T. Linzey, A. Allison, A. Mooney, A. Wilson. The society is going strong, and old members would do well to attend meetings more regularly and give the officers their unlimited support. After the usual business Mr. McKay judged, and his awards gave general satisfaction:—Goldf.: 1, Allison. Linnet: 1, 2, Forrester; 3, 4, Boyle; 5, Murphy; 6, McGaw. A.O.V.: 1, Murphy. Mule or Hybrid: 1, 2, 3, McGaw. Next meeting Mr. Forrester will lecture on the good and bad points of the Norwich Plainhead. New members are now being enrolled; particulars from T. Adair, Sec, 4, Hoston Street, Port Glasgow.

LEYTON C.B.A

Table show and judging competition, headquarters, 2nd April, Mr. F. Wallace chair. About thirty birds were staged, and there was a very good attendance. Mr. G. A. Parker won special best bird with a fine Hawfinch, and Mr. Marshall spl. second best with a buff Norwich. Most of the members present took part in the judging competition, each paying an entry fee of twopence, the whole amount being divided between the two competitors scoring the highest number of points. The winners were Mr. Dalton and Mr. Hazeltine. Mr. W. L. Taylor acted as final judge, and was accorded a hearty vote of thanks for his kindness, thus bringing a very pleasant evening to a close.—A. W. Farmer, Assist. Hon. Sec.

SOUTHAMPTON C.B.S.

Meeting, April 3, Mr. W. G. Fellows chair. The few members who struggled through the snow to hear Mr. Holliday speak on "Yorkshires," were disappointed through the sudden illness of the lecturer. Mr. Holliday hopes to give his lecture later in the season. Accounts of recent pair show (showing a small balance to the good) were read. Schedule arranged for British, etc., table show, May 2; 10 classes; Mr. W. G. Fellows judge. A judging competition will be held; prize given by Mr. Blann. The Hon. Sec. announced that he had received a letter from the late Sec. (Mr. Page), now serving in India, and members would be sorry to hear that Mr. Page and Mr. Bousfield had been seriously ill, but it was satisfactory to know they had both practically recovered.—G. J. Slade, Hon. Sec.

BIRKENHEAD B.B.A.

Meeting at Abbott's Cafe, Market Street, Birkenhead, April 5. New members elected: Messrs. J. McDermott, J. G. Rogers, A. Scott, H. Norton, E. Allison, E. Smith, F. Jones, J. Lucas, A. Davies, A. H. Davies, E. Smith, Messrs. J. McDermott and J. G. Rogers, both are champions, and with our worthy member, Mr. Wm. Jones, of Birkenhead, the society now have three all-England champions. This is quite an honour for a society only formed this year, and it shows the interest members are taking in bringing new friends to the Birkenhead B.B.A. Arrangements made for N.F. shows in the Trade and Labour Hall, Birkenhead, third Saturday in June and July. We have some good specials, including money specials. Mr. F. Handley is to be asked to judge. Several good suggestions were put forward, which, when acted upon, will be greatly to the interest of the members.—H. Wakem, Sec.

SACRISTON F.F. AND C.B.S.

Annual meeting, club room, April 7. The auditors' report (Messrs. Sutherland and Thirkettle) was very unsatisfactory, both to them and to the meeting. They could not form a balance-sheet as the books were badly kept, and it was decided that all books be accepted in such state as they were, with a deficiency of over £3, not including other debts we have to meet. I expect all claimants of money to write me before the present month is ended, and then we will see at once as a club how we are standing. This club will be run under new management, but under the same name, and I expect all to assist me under the present circumstances. Election of officers: Messrs. Sutherland, Chairman; Geo. Howe, Vice; R. Wilford, Assist. Sec.; Briggs, Treas.; Committee: Robt. Dunston and Ral. Dom, Rabbit section; J. Hird and J. Tyrral, Pigeon section; J. Thirkettle and Tindale, Poultry section; W. Forster and R. Wilford, Cage Bird section; Auditors, Sergt. Forster (Police Station), and Another.—R. J. Scorer, Sec., Coronation Street, Sacriston.

NEWCASTLE C.B.S.

General meeting, April 5, Shield's Cafe, Bigg Market. Mr. G. Dobson presided over a good attendance, many new faces putting in an appearance, and those we are always glad to welcome. New members made: J. Carr and R. Lucas, making eight new members the last two meetings. Mr. J. Johnston (Wallsend) gave a lecture on the rearing of young Canaries. Being one of the most successful breeders up North, we all expected something good, and I am sure those who did not hear him missed one of the best and most instructive lectures given before our society. He dealt with the stock birds from after the moult, hatching, and until youngsters were well on to hard seed, and as he has reared well up to 100 and over in a season himself, anyone who has any trouble would do well to adopt his methods. Not only the novices, but some of the old hands, said they had learned something they never knew before, and would try some of his methods this breeding season. Mr. Johnston was given a hearty vote of thanks, and in reply said how pleased he would be to know if anyone did benefit by listening to him. He was always pleased to help the Fancy in any way, and if anyone wanted to know his ideas during the season, he would be pleased to give them. He gave any of us a hearty invitation to pay him a visit during the breeding season, for he makes no difference as regards visitors at that period. He promised to give me the MSS. of his lecture, and this will appear in CAGE BIRDS later. We have also another good thing on for our next meeting, which will be of great value to all who care to attend—Mr. J. Maddison on "Mule Breeding." We give an invitation to fanciers not to miss another treat.—F. W. Laidlow.

CLUB AND SOCIETY NOTICES.

ONE NOTICE of any forthcoming Society meeting inserted free. It must reach us not later than Tuesday morning's post. Specially printed Club Notice Postcards may be had free on application to our Manager. Secretaries should always use them

NOTE.—Only the details asked for on our cards can be published. Such phrases as "a large attendance desired," etc., must not be included. Classification for forthcoming shows, appeals for new members, and any other matter in the nature of an advertisement will only be inserted if paid for at advertisement rates.

Singing Contests.

Announcements of forthcoming contests in the nature of advertisements must be paid for at advertisement rates, two words a penny.

BLACKBURN.

Quality Linnet contest, April 7, Empire Hotel, Bolton Road: 1, 2, Knowles; 3, Page; 4, Jones. There was a poor show, owing to some of our members losing their birds.—T. Haythurst, Sec.

KIPPAX.

Kippax Linnet Club, members' sing, April 7; 33 birds entered and some of the best singing that has ever been done at Kippax was heard. Timekeepers, J. Wallis and Potter; tappers, H. Collinson and W. Perkin. 1, Lightfoot; 2, 3, Collinson.—R. Plows, Sec.

CASTLEFORD.

Linnet singing contest, George and Dragon, Bridge Street, April 8. 21 birds entered for three prizes: 1, B. Nelson; 2, Wainwright; 3, Shaw. Open contest, April 9, 64 birds entered for four good prizes. 1, Skidmore; 2, B. Nelson; 3, Parlet; 4, Wainwright. Skidmore wins 1s. pool. There was a match between B. Nelson and Wilson; Wilson won.—A. Watkiss, Sec.

LEEDS.

Grand contest for Linnets, April 1, Albion Hotel, Saville Green, Leeds, where some excellent singing of 21 birds was heard: 1, 4, Sellars; 2, Thompson; 3, Hollingsworth. Judges, Crane, Haynes, Grant. Also contest same evening for Linnets: 1, Reeder; 2, Chippendale; 3, Thompson. Judges, Grant, Jennings. I have great pleasure in announcing that Mr. T. Ward has won the "Gawthorpe" cup for most points for Linnets for 12 months, and this was presented to him on Easter Monday at the above hotel. T. Crane, Sec.

A good contest for Linnets was held April 8, at the Old Bird House, Albion Hotel, Saville Green, Leeds. 20 birds competed: 1, Chippendale; 2, Callagan; 3, Bott; 4, Towers. Judges, Crane and Hardcastle. Winning numbers: 1, 148; 2, 875 (R); 3, 460; 4, 190; 5, 946; 6, 549.—T. Crane, Sec.

Linnet singing contest for quality, Clarence Hotel, Skinner Lane, April 8. 34 birds sang for four prizes: 1, 2, Bamfield; 3, Binns; 4, Kilbride. Judges, T. C. Summers, A. Butterfield; timekeeper, W. Lipman. —T. C. Summers, Hon. Sec.

Open contest, April 1, Glassmakers' Arms, Greyhound Place, off York Road, Leeds. Linnets, 40 birds: 1, Buttery; 2, 3, shared Marshall and Richardson; 4, Buckley. Night singing, 22 birds: 1, 2, Marsball; 3, Richardson. Judges, Dearlove, Bomfield, Biss. Open contest, April 8, 36 birds. Linnets: 1, 2, shared Richardson and Dearlove; 3, Marshall; 4, Buckley. Night singing, 20 birds: 1, Marshall; 2, Buckley; 3, Richardson. April 9, 62 birds: 1, Buckley; 2, Richardson; 3, Marshall; 4, Buttery. Judges, Dearlove, Biss, Bomfield.—G. Marshall, Hon. Sec.

STRANGE WAR-TIME MEALS.

A portion of an article which appeared in the "Newcastle Daily Journal" of March 30. (By the Journal Commissioner.)

The behest of the Food Controller to conserve the existing supplies has led to the concoction of some strange dishes. Foodstuffs, which would at one time have been laughed at are now coming into use, but it is only the very daring people of Tyneside who have courage enough to break away from the old-fashioned lines.

Lord Devonport personally recommended Sparrows as suitable for eating purposes. In fact, he said that he had personally tasted them, and could recommend those hitherto little pests as rather delicate food.

One Novocastrian was much impressed with the subject, so he decided to try the experiment, which he did one day this week. It was my lot yesterday to hear his narrative of the scheme.

"I have a farming friend near Monkseaton," he said, "who was complaining about the trouble Sparrows were causing upon his farm. I volunteered to go down and shoot them. This I did. I borrowed a gun and cartridges, loaded with a fine size of shot known as 'Sparrow hail.' It was not long before I came in contact with a flock of the birds I wanted, and, discharging the contents of a few cartridges into their midst, I was able to pick up forty plump birds."

"I thought that was a very good beginning, so I returned to the farm and gave over the gun. I offered to divide my 'bag' with my farming friend, but he only laughed, and told me to take the 'game' home and fill my larder. So I carried the birds back on a sling, and as I joined the electric train the passengers looked over my 'bag' and smiled broadly. I possessed the game, so they could have their smile.

"Next day we decided to have Sparrows for dinner, as suggested by Lord Devonport. My wife knows how to dress a chicken or pheasant, but to dress a Sparrow for the table was something beyond her. The cookery book was on this occasion a futile guide, but I borrowed another aid to cooking, and therein found a clue to the art of dressing a Sparrow.

"Three of us set to work to feather and dress the birds for the table. It would have sorely tried our patience, and in normal times we would have put the 'game' in the dustbin, only we were determined to be patriotic, and to tread in the footsteps of such a high authority as the Food Controller. It took us nearly two days to dress the birds. The rest was easy—that is, they were bunched together, placed in the oven, and roasted. We had some roasted potatoes and green peas, and a jolly good meal we enjoyed.

"How did they taste?" was my interested question.

"Very nice, indeed. There was a sort of partridge flavour about them. What one discovered was that double the usual time should be allowed over such a meal. You have to pick the bones very carefully. For anyone who eats too quickly, and thereby suffers from indigestion, I would recommend a dinner of Sparrows. There is no chance to hurry over such 'game.' One has ample time to masticate the first mouthful before the next can be gathered upon the fork. I hope others will try Sparrows. If they are hot-tempered already, they will be in a towering rage before they have completed the course. Job must have been a diner upon Sparrows. Still, I am going to have another meal next week, perhaps—this time a Sparrow pie."

"PIGEONS"

The only paper dealing solely with Show, Table and High-flying Pigeons.
Coloured Plates a Special Feature.
Every Friday 2d. Send P C. for specimen.

"FUR & FEATHER"

The Rabbit, Cat and Cavy Paper.
The only Paper devoted to these subjects.
Every Friday 1d. Send Postcard for Specimen.

Offices: Idle, Bradford, Yorks

Provided an addressed envelope, sufficiently stamped, accompanies same, every effort will be made to return unaccepted contributions promptly, but he does not in any case hold himself responsible for their safety.

All matter intended for publication must be written or typed on one side of paper only, and must reach us not later than the first post on Tuesday if insertion in the next issue is desired.

"CAGE BIRDS" will be sent post free weekly, on the day of publication, at the prepaid rate of 10s. per annum for the United Kingdom, and 13s. annually for foreign countries.

Twitterings.

South Shields "Always Ready" C.B.S. has engaged the following judges for our show, Nov. 17, writes Mr. J. W. Watson, Sec., Mr. H. W. Battye, Huddersfield, Canaries; Mr. J. Maddison, Newcastle, British.

On Tuesday next, April 17th, at the headquarters of the Wimbledon C.B.S., The Broadway, at 8, Mr. J. Robson will give a lecture on "Management and Breeding." As the subject is of great interest at this time of the year, writes Mr. G. Griffiths, hon. sec., the Society hope that full advantage will be taken of Mr. Robson's visit, and a good muster of members and visitors will result. Strangers are heartily welcome.

Ramsden's Pure Peppers. Few one, three, and five pound canisters left from first consignment for retail post orders. Second consignment is at the bottom of the sea. Third and last consignment due early in May. Orders can only be booked subject to safe arrival. Owing to absence from town, and shortage of labour, no orders will be executed during the first 14 days in May, July, and September.—J. W. Ramsden, 11, Josephine Avenue, Brixton, London, S.W.—(Advt.)

Patronage of the Welsh C.B.C.

Secretaries of clubs desiring the patronage of the Welsh C.B.C. should apply to the hon. sec., Mr. D. H. Tedstone, 5, Struet, Brecon.

An Address Wanted.

Mr. W. Fishwick, 14, Longton St., Chorley, would be glad to learn the address of Mr. J. Netherwood, the judge of Roller Canaries.

Where Are the Migrants?

The earliest of the season's rambles to come to our notice was a little walk taken by our friends, Messrs. Crabb and Trower, on Saturday, April 7. The ground traversed was from Ickenham to Denham, and back to Uxbridge. Wild bird life was far from plentiful, as compared with previous seasons, and migrants were entirely absent. At this season one would expect to see in this district the Chiff-Chaff, Sand Martin, and Wryneck, and Mr. Crabb tells us that previously he has seen the Sand Martin here as early as March 31. The abnormally late spring seems to be having its effect upon the arrival of our migrants, as well as upon things in general.

Amateur Ornithologists at Sea.

A correspondent to the Aberdeen "Evening Express" recently asked a question as to the identity of a bird which from the description given seemed to be a Fieldfare. In reply, a reader sent in a letter in which he said that the bird resembled the "Waxwing or American Robin," and proceeded to give a very fair description of the plumage of the Waxwing. The second name for the Waxwing, "American Robin," is distinctly good, for no two birds could be more dissimilar. Moreover, neither of them resembles the Fieldfare.

In an article in the London "Globe" entitled "The Riddle of Migration," Mr. G. F. M. Cocks says:—The middle of March is the beginning of the migration season. Naturalists awaiting the birds' return keep then a sharp look-out to mark the advent of the Wheatear. A small, plump, insignificant bird is he, with his jewel of an eye set in the middle of a level splash of black feathers, and with an appetite that would do credit to an alderman. Able, like the other birds, to take the best of two continents, he comes here as the winter is being cleared up and packed off, and, considering his size, a right heavy toll does he take of our stock. Beyond the reach of the Food Controller, he attacks the wheat, getting quite indecently plump, too fat, indeed, to sing, for his faint, low note gives one the impression that he is singing, not with all his might, but only with the energy left over after attending to the main business of life, that business being to eat and eat, and generally to behave like a "food hog."

We hope no one reading this will endeavour to keep a captive Wheatear on wheat, for the bird is strictly insectivorous. We know that much difference of opinion has always existed as to the reason of the English name for this beautiful migrant, but that it is so named because it "attacks the wheat," as would be inferred from the text quoted, is a very broad guess indeed. The most likely reason for the popular name is that the bird has a conspicuous white rump, and "aers" is old Saxon for rump; hence Whiteaers, corrupted into "Whitearr" and Wheatear.

OBITUARY.

It is with deep regret, writes Mr. J. W. Watson, sec., South Shields, "Always Ready," that we have to announce the death of Mrs. R. Honeyman, wife of one of our members, who has passed away after a very short illness, and we extend to Mr. Honeyman, our deepest sympathy in his sad bereavement.

Seasonable Hints on Useful Weeds.

By RICHARD MORSE, F.R.H.S.

A new weekly feature which will be found of the highest value to all who keep seed-eating birds, and of interest also to all who appreciate the beauty and usefulness of the flowers of our waysides and meadows.

THE common chickweed (Stellaria media Vill.) is at last with us again in all its wonted vigour and abundance, and I recently came across a neglected field which could show scarcely any other plant from end to end. It is really surprising how such an apparently tender and delicate little plant can survive the severities of a winter such as we are just leaving behind, and push forth its little starry flowers so early in the year.

The man in the street would tell you that everybody knows the chickweed, and that to attempt to describe such a common weed were an insult to the intelligence, but the botanist knows better. He also knows that what is commonly called "hemlock" is not hemlock at all, and that comparatively few folk who have not studied our wild plants know how to distinguish even a common dandelion from the multiplicity of plants which it closely resembles.

A Necessary Caution.

These facts must be my explanation in these weekly notes for any apparently trivial details in descriptive matter, for it often happens that certain parts of an edible plant are remarkably similar to those of highly poisonous species, and most of us can recall instances where severe illness or even death has resulted in consequence of the administration of portions of wrongly identified plants. It, therefore, behoves all who dabble in these matters to cultivate the habit of exact observation, and so obviate the occurrence of unhappy results to their endeavours.

There are many different kinds of chickweed to be found in our fields and waysides, but the one shown in the accompanying sketch is that which is most generally in use with bird-keepers, though I hope to draw attention to one or two other species later in the year.

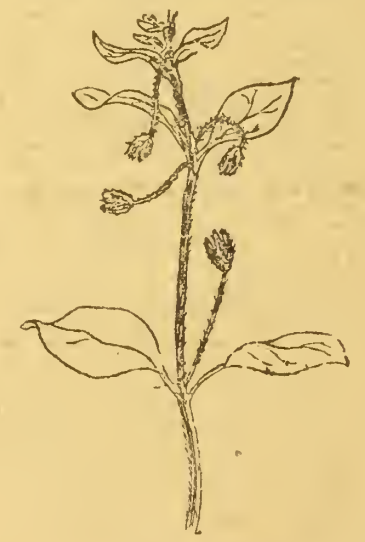
The plant which is most commonly mistaken for chickweed is that known as the three-nerved sandwort (Arenaria trinervia L.) which in some parts of the country later on will be almost as abundant as the chickweed itself, though so far as I have been able to ascertain it is not in favour with any bird-keepers as a food for their pets, and certainly scarcely any of the latter appreciate it.

How to Make Certain

One of the distinguishing characters of chickweed is that its tiny white flowers, though possessing in reality only five petals, appear to have ten. This is due to the fact that in this species each petal is so deeply cleft in the centre as to give it the appearance of two, whilst in the sandwort mentioned above the petals are undivided.

Moreover, although both plants have a certain degree of hairiness, it is important to note that the hairs in chickweed run in a straight line down the stem, alternating from side to side at every joint, where the egg-shaped leaves grow in pairs. This line of hairs is a striking characteristic of the chickweed, and inexperienced collectors should always look for it before gathering either the seeds or plants.

The value of chickweed as a green food must be well known to every reader of CAGE BIRDS, for it would hardly be possible to find a single plant in greater favour in the whole British flora. At the present time very few seed-pods have fully ripened, and so its most useful stage has not yet been reached, but in a few weeks' time Linnets, Twites, Greenfinches, and Redpolls, with hosts of other favourites, will devour it eagerly, and with the greatest benefit. During the breeding season it is particularly useful, and hens at this stage should have abundant supplies of it, on which they will take great pleasure in feeding their young. The medicinal virtues of chickweed have long been known, and it is generally recognised as one of the most reliable bird-plants we have for the proper regulation of the bowels, and for cooling effects upon the blood.



CHICKWEED IN SEED.

Readers are invited to send any botanical specimens which they have difficulty in identifying. The whole plant, including fruits, should be sent whenever possible. Packages should be addressed "The Editor, CAGE BIRDS, 154, Fleet Street, London, E.C.4, and must be accompanied by a P.O. for sixpence. Answers will appear in this column.

ANSWER TO CORRESPONDENT.

M. H. Askham.—Your specimen was the hairy bitter cress (Cardamine hirsuta L.), a very common and variable weed belonging to the cabbage family. I regret I have had no experience with it as a food during the breeding season, but see no reason whatever why it should not be used in moderation. Both green plants and seeds have fairly pronounced stimulating properties, and it will be wise to watch its action carefully before giving it too freely. The seeds, though so small, contain a fair amount of oil, and being rich, too, in nitrogenous matter, are of considerable nutritive value. A certain amount of sulphur is also present, which is readily assimilable.

Barrow's 1917 Show.

Mr. D. McFarlane, 26, Lord Roberts Street, Vickerstown, Barrow-in-Furness, writes that he has taken over the duties of show secretary for the annual show, Dec. 7-8 next. The show manager is Mr. W. H. Johnson, and assistant manager Mr. W. Douglas. Mr. McFarlane says that every endeavour will be made to ensure the success of the show. There will be a big classification and plenty of specials, and four popular judges will be appointed. The Town Hall has been secured for the show, and this is an ideal building for the purpose.

Drastic Indictment of the Bullfinch

Writing to the "Irish Times" Mr. J. A. Rogers Boyd, says:—"For years I have recognised the enormous destruction that the Bullfinch is capable of doing to fruit trees—indeed it is only in an occasional year that the trees escape his ravages. Many people, doubtless, wonder why their plum and pear trees especially fail to bear fruit; in most cases, I venture to say, the Bullfinch is the cause. Last year these birds made a beginning on two Victoria plum trees. I shot several, and the damage seemed to cease. From these two trees I pulled about 80 lb. of fruit; but in some years I can hardly get 8 lb., owing to the wholesale destruction of the buds, which can be seen lying like coarse dust underneath the trees. This year the plague has been especially severe; my plum and pear crop is practically wiped out in prospect. The Bullfinch is a handsome bird, but he is only a feathered rat—the Hun of the garden, leaving a trail of destruction in his wake. I always shoot these birds when I can, but it is not of much use unless other fruit-tree owners do their part. The Government should put a price upon his head, for, if he were totally exterminated, doubtless thousands of pounds worth of valuable fruit would be saved to the country. I note that this year even a plum tree on my manse wall has been attacked."

TREATS IN STORE FOR BIRD LOVERS.

Following is a full list, as at present arranged, of the proposed rambles of the Field Section of the National British Bird and Mule Club. Readers who may have an opportunity of joining any or all of these rambles should keep the list by them. Such an opportunity of observing the natural lives of our birds has never before been put before bird lovers, and we are sure that all will be appreciative of the amount of time and trouble already expended by Mr. Trower, the hon. treasurer of the Club, in compiling so attractive a programme.

April 22, Sunday, Beaconsfield to Amersham (distance from London 21 miles), station Marylebone; April 26, Thursday aft., Theydon Bois to Loughton (15), Liverpool Street.

May 5, Saturday aft., Denham to Uxbridge (14), Marylebone; May 13, Sunday, Harold Wood for Havering-atte-Bower (15), Liverpool Street; May 17, Thursday aft., South Mimms, Shenley, etc. (14), King's Cross; May 26, Saturday (all day), annual outing to Gomershall (36), London Bridge; May 27, Whitsun (two days), New Forest (84), Waterloo.

June 7, Thursday aft., Weybridge, St. George's Hill (17), Waterloo; June 16, Saturday aft., Hatfield and District (20), King's Cross; June 24, Sunday, Burford Bridge to Ranmore Common (24), London Bridge; June 28, Thursday aft., Chorley Wood to Chenies (20), Marylebone.

July 7, Saturday aft., Rickmansworth to Chorley (21), Euston; July 15, Sunday, Byfleet and District (22), Waterloo; July 19, Thursday aft., Potter's Bar to Northaw (14), King's Cross; July 28, Saturday aft., Bricket Wood, near Watford (18), Euston.

Aug. 5, two days, St. Neot's (51), King's Cross; Aug. 9, Thursday aft., Chalfont Road to Chenies (21), Marylebone; Aug. 18, Saturday aft., Leatherhead to Fetcham (18), London Bridge; Aug. 26, Sunday, East Horsley and District (23), Waterloo; Aug. 30, Thursday aft., Esher-Claremont (15), Waterloo.

Sept. 8, Saturday aft., Gerrard's Cross to Headingley (17), Marylebone; Sept. 16, Sunday, Tadworth to Leatherhead (23), London Bridge; Sept. 20, Thursday aft., Stoke D'Abernon to Bookham (19), Waterloo; Sept. 29, Saturday aft., Caterham to Chipstead (20), London Bridge.

Subject to alterations, time of train and place will be published each week in CAGE BIRDS. Rambles all day on Sunday. An efficient guide will be provided. On Sundays gentlemen had better provide themselves with light lunch. Damage to property in places visited must be strictly avoided. Wild bird laws must be carefully observed. Members, friends, and fanciers welcomed. For all further information apply to Hon. Treasurer, T. R. Trower, 442, Caledonian Road, N.7.

Meetings: Last Thursday evening in every month Headquarters: 2, York Street, St. James' Square, Piccadilly. Subscription: 5s. per annum.

FAVOURITE FOREIGN BIRDS.

By "TYRONE."

(Continued from page 169.)

Some practical hints upon the treatment of the more inexpensive of the many beautiful foreign birds which may be kept as pets.

THE Diamond Sparrow is about the size of a Siskin, and is a native of Australia. It is a beautiful bird, its contrast of black, grey, and crimson being very effective. It has a pale grey head, with wings and tail a darker shade; across the breast is a band of black, and another black band sprinkled with white spots adorns its sides; its beak is red, and it has a patch of red just above its tail. The cock and hen are alike in plumage, and the best chance of procuring a pair is to choose one bird with a much wider skull and beak than the other.

Diamond Sparrows are generally peaceable with other birds, being very lazy. They prefer sitting quietly on a perch to the exertion of quarrelling and fighting, and this preference often leads to their death, for they frequently get too fat and die of apoplexy.

Diamond Sparrows usually arrive in England in a very ragged and featherless condition, but when removed from the dealer's storecages and caged separately they soon recover and replace the lost feathers.

For food Diamond Sparrows will need canary, millet, and spray millet, but in the event of their breeding in the aviary, which is not a very common occurrence, they would also require insect food and egg for their young ones. The Diamond Sparrow should not be left in the garden aviary during the winter, but should be brought indoors early in November.

The Saffron Finch.

Although a native of Brazil, the Saffron Finch is absolutely hardy, and will be perfectly happy in the garden aviary all the year round. The cock is a handsome bird about the size of a Sparrow, and has a yellowish green back and wings, and a saffron coloured head and breast, with a reddish tinge just round his beak. The hen is greyer, and the young ones are like her. The Saffron Finch has not a very high character for good temper, but individuals vary very much; while some are perfectly amiable, others are decidedly the reverse, and some are perfectly murderous towards their own mates as well as other birds. When in the company of smaller and weaker birds they should be carefully watched, but as they are decidedly interesting it is worth while to find the good tempered members of the family, and remove the quarrelsome ones.

Saffrons nest very freely in all but very small aviaries, rearing brood after brood until quite late in the autumn, and young birds have even been known to leave the nest in mid-winter, in spite of the shortness of the daylight compared to the long, cold nights.

Wild Saffron Finches generally build in holes in trees, and so they are quite satisfied, when in the aviary, with a cigar box nest or Hartz mountain cage. They build a bulky nest of hay and feathers, or anything else that seems to them to be suitable, and lay from three to five eggs. The cock and hen share the incubation between them, and the eggs are hatched in about fourteen days.

The old birds only require canary and millet, with green food, mortar, etc., but when the young ones are hatched soft food also must be given. The young Saffrons come into full plumage when they are about two years old, and until that time the cocks can only be known by their song. Hybrids between the Saffron Finch and Canary have been bred, but they are decidedly uncommon.

Java Sparrows.

Java Sparrows are probably the hardiest as well as the cheapest of all the birds imported during the year, and will live and thrive under conditions that would kill any other foreign bird. They are natives of rice-growing countries, and are exported from Java, India, China, and Japan. In their native countries they are very destructive birds, feeding in the rice fields in large flocks, as Sparrows feed in the cornfields over here.

The Java Sparrow is a little bigger than an English Sparrow, and more heavily built. His body is slate grey, with flights and tail black; head rich black, with a pure white patch on each cheek. His beak is bright red, and he has very thick legs and feet.

He is absolutely hardy, and in the aviary his plumage is always perfect; in fact, he looks as if he was cast in a mould instead of being clothed with separate feathers. It does not seem to make any difference to the Java Sparrow whether it is midsummer or midwinter, and even in a damp fog he seems to be perfectly contented.

Java Sparrows live almost entirely on canary seed, though they like a little millet as well, with a few oats occasionally in the winter, or when they are feeding young ones. They are very clumsy birds, and their seed should be placed in hoppers and deep boxes, or their large feet will scatter it wastefully.

Several food boxes should be given, as Javas are extremely "touchy" when feeding, and will not allow another bird to approach the seed pan until their appetite is thoroughly satisfied. They are fond of bathing, both in winter and in summer, and for green feed seem to prefer flowering grass and chickweed to anything else.

Aviary bred Java Sparrows breed very freely, building a rough nest of hay lined with feathers. They generally select a cigar-box nest, but almost any box will do. The eggs are white, and are hatched in about 14 days.

The young birds leave the nest at a month old, and feed themselves about a week or ten days later. Young birds are entirely grey, with black beaks, but they change colour at the first moult. Birds hatched late in the autumn generally moult the following spring.

Imported Java Sparrows do not breed nearly as freely as aviary bred birds, and when they do make a start they choose the autumn; therefore, although aviary bred birds cost rather more to buy, they are more satisfactory in the end.

Java Sparrows are often very spiteful with smaller birds, and as their beaks are very thick and strong, it is not safe to keep them with Waxbills, especially if the aviary is not very large. The cock and hen are alike, but the skull of the cock is broader than that of the hen, and his beak is thicker and broader than hers.

White Java Sparrows.

White Java Sparrows are the cage-bred descendants of the wild birds; they have been produced by the Chinese and Japanese, just as the white Bengalese have been bred from dark birds. They are as clumsy in their movements as the grey birds, but are much less spiteful; though the white Javas will "scold" very crossly, they rarely do any real damage to other birds.

In my aviary they generally spend the greater part of the day sitting on some boxes hanging high up in one corner of the aviary, and noisily driving away any other bird that comes near. But they never chase or bite another bird.

White Javas breed much more freely than Greys, but over here they will not often breed in cages. They are very nervous, and directly anyone approaches the aviary they fly into the covered portion, or into any sheltered corner where they think they will be unobserved, and this is the more annoying as the other birds are infected by their fear and fly away also.

If an aviary be not available these birds might perhaps be bred in a large wooden packing case wired only in front, but an aviary is best. The imported birds generally start nesting in August, and will rear a nest or two before the cold weather sets in. In a warm room they would be likely to breed almost all the year round.

Young birds, even when bred from pure parents, are generally flawed with patches of grey feathers, and some are quite heavily marked, or even grey all over. They grow much whiter at the first moult, so should be kept until this is over. When the birds are imported these grey feathers are often cut off, but, of course, they appear again when the bird moults.

The song of the Java Sparrow is very monotonous, but the notes of the white bird are, perhaps, to be preferred to those of the grey. When the cock Java Sparrow wishes to show off to his mate, he jumps up and down on the perch near her, but the action is so clumsy that he looks like an elephant trying to gambol.

The Orange Bishop.

The Orange Bishop comes from West Africa, and is a little smaller than a Siskin. When in full plumage its colouring is very bright and pretty; the forehead, cheeks, breast, and lower parts are black, and the neck, throat and back are bright reddish orange; the red feathers round the back of the neck stand out like a ruff. The wings are brown.

When out of colour the cock and hen are both soberly coloured and are a little like a hen Sparrow. Weavers can be bought very cheaply when out of colour, and the different varieties are then much alike. They begin to come into colour in June or July, and change again about January.

Bishops are jealous and tyrannical, fighting fiercely with cocks of their own kind, and sometimes even chasing their own mates about the aviary until they die of exhaustion. Like all the commoner Weavers, they are very hardy birds.

Weavers are easily fed, and require chiefly canary seed and a little millet and green food. When coming into colour, and while in breeding plumage, they require a few ants' eggs or mealworms as well.

Red Beaked Weaver.

The Red Beaked Weaver is also a West African bird, and is not brilliantly coloured like the Bishop. When the cock is in full plumage, he retains his ordinary Sparrow-like colouring, relieved by the red beak and a black face.

In the aviary this bird seems about the least vicious and tyrannical of all the race, and he is certainly very hardy, and may be left in the garden aviary during the winter. They do not seem to be liable to any diseases, and will live in perfect health for years.

Red Beaked Weavers are great nest builders, and the branch of a tree should be fixed up in the aviary for them to suspend their nests from, and tough grass and hay should be provided. In a cage they will often weave silk and knitting wool through the wires.

None of the Weavers are very likely to breed in the aviary, though the birds will weave more complete nests if both cocks and hens are kept. Food, as for the Bishop.

A SPRING VISITOR.

Towards the end of April or early in May, according to the season, our coppices will be enlivened by the exquisite song of the Blackcap and we shall know that spring really has come. One or more specimens of this charming songster are to be seen at any of our important shows. Our picture is a portrait of the fine Blackcap, shown with great success by Mr. W. H. Vale, Clapham.

Echoes from the Land of the Enemy.

By H. W. GUITERREZ.

How the World's Enemies are endeavouring to keep in a position to resume their old ascendancy in the Canary trade, especially with regard to the supply of singing Canaries.

ONE great section of the Roller Fancy in the enemy country is organising through their Central Union a campaign for fostering now and securing after the war their ascendancy both in producing the very best saleable birds and in capturing the export trade. They own that they are exporting far fewer birds than before the war, also that there are far fewer birds bred. They experience little difficulty so far as trade is concerned with Bulgaria, Turkey, Serbia, Belgium, Luxemburg, Switzerland, Holland, and Denmark, though with Norway and Sweden it is not so easy a matter. With regard to other countries they make the boast that they can still get a few birds through our blockade by means of deception and trickery.

Breeding over there now will apparently be undertaken in the face of very serious drawbacks, owing to the food question. Already in November last year they were preparing for a season without rape seed, and in face of a great scarcity and dearness of foods of the soft category, egg, biscuit, etc. Many have had to destroy their birds, others have only reserved those of the highest quality, a policy they have have been urged to adopt.

Urgent representations to high quarters, signed by members of all the clubs, have up till now secured some mitigation of the evil, a proof of what a properly organised fancy can do, but the seed question would seem at this date almost to be hopeless.

However, they still carry on with the restricted diet, and our breeders and our exporters must not relax their efforts. It is not a question for the Roller fancier alone; it is of moment to all patriotic and business-like fanciers and traders.

And here is the reason of my making these remarks; a serious discussion, not to say movement, is on foot over there to produce a new class of songster, a bird of form and colour of first rate Roller song. The experiment has been made, and a breeder claims to have been successful.

It is with the express object of snatching the whole of the world's trade by producing an unparalleled songster of first-rate form and colour; and, what is more, the Union is taking the matter up. In this connection the classes mentioned are Yorkshire, Dutch, Lizards, Cinnamons, from what I have been able to gather.

The system is to select first-class birds of form and colour, say Yorkshires, and train their young cocks from their earliest days under two or three year old Rollers of the very highest class. One of these Rollers is to be put into the flight cage while the cocks are still very young. When eaging off, it is recommended that for every six young cocks there should be at least three to four Roller schoolmasters. Only the finest birds for colour and form are selected as learners, and the best songsters among these only are set aside for next season's breeding, and so on. By this means the excellency of type in colour and form is maintained and at the same time the vocal organs of the strain are being developed.

I may add that shows with good entries were held last season, and birds as usual of the highest standard were exhibited, particulars of which are in my possession.

Correspondence.

EVERY WEEK A PRIZE OF TEN SHILLINGS IS GIVEN FOR WHAT, IN THE OPINION OF THE EDITOR OF "CAGE BIRDS," IS THE BEST LETTER PUBLISHED UNDER THIS HEADING. THE LETTER MAY BE ON ANY SUBJECT. IT MAY BE A COMMENT, FOR OR AGAINST, ON ANYTHING WHICH IS PUBLISHED IN OUR PAGES, AN OPINION ON THE POLICY OF OUR PAPER, OR MAY HAVE NO REFERENCE WHATEVER TO ANYTHING WHICH HAS ALREADY APPEARED. SO LONG AS IT IS ON A "BIRDY" SUBJECT, AND IS ORIGINAL, IT WILL BE ELIGIBLE TO COMPETE FOR THE PRIZE.

The Prize this week is awarded to Mr. E. Gooderham, 472, Woodbridge Road, Ipswich.

Eggs Drying Up.

Sir,—I would like to know if any reader could tell me the cause of eggs being infertile. The eggs have been all dried up in the shells after sitting twelve days. I have seen the cocks tread the hens and the birds have been wild to get together. All last year I did not have a young bird, for all the eggs were the same. I have fed them on a mixed food in sixpenny packets, and when I put them together I give them egg food.

F. Jebb.

Gathering Thistle & Dandelion.

Sir,—I should like to answer "Novice's" letter re above. My way with thistle and dandelion is to collect the heads (with the stems), after the flower is dead, and before they re-open to throw out the seed. Cut off the down as near the seed as possible; place the stems in a little water in a dish as you would flowers, then place them in your bird room, when they will open out and ripen and dry. As they ripen I remove and store, not in air-tight tins. I have found this the best way, as when you gather them outdoors, ripe, you lose half the seed with the wind.

Nor'-West.

"Some Hints on Mule Breeding."

Egg Food for the Finches.

Sir,—With reference to my winning letter under the above heading, I have been asked if I gave egg food (as prepared) to finches. To this I say yes, decidedly, and I have never noticed any ill effects thereby. It is just as important to keep the finch in condition as the Canary hens. Some fanciers are under the impression that it is most unwise. Personally I think egg food judiciously given is a very acceptable and valuable food for finches. In fact, egg food has brought a finch round for me when on the verge of death, and everything else had failed to induce it to eat. Therefore it is wise to get finches used to soft food.

J. Kershaw.

The Feeding and Rearing of Young Canaries.

How to Use Egg-food and Green-food.

Sir,—When the hatching process is completed one should begin to supply the egg-food to each pair as occasion requires, bringing them on to the ordinary egg-food by the third day. From the fourteenth day until the young are three days old, the bath should be withheld, unless given for a particular purpose. In the meantime, if all goes well and the hen feeds the young satisfactorily, adhere to simple methods only for the first three days. Let the usual seed diet and egg-food suffice, give the egg-food in small quantities, and keep it freshly supplied whenever possible at least three times each day. Do not try to economise by mixing any that may be left over with the freshly made supply. This is the very worst kind of false economy. Throw away all that is left and wash out the egg drawer before giving the fresh supply. Half a teaspoonful at each meal will be sufficient for the first two or three days. It is a safe plan to endeavour to regulate the supply so that the quantity given is just cleared up before the time to give a fresh supply.

By the fourth day after hatching the egg food should be gradually brought to a compound of one part hard-boiled minced egg and two parts stale bread crumbs, which should be sufficiently nourishing for the rest of the rearing process. All kinds of wholesome biscuits may, of course, be substituted for ordinary bread, as very commonly done in these days, perhaps too much so.

Green food should be added on the fourth day. This consists principally of young lettuce and dandelion leaves. The last named, I think, is the best, as it was the only green food that I used all last season, and I found it very successful. The young birds thrived and grew enormously on the dandelion leaves and the freshly placed egg-food, giving the egg-food at least three times a day, and the dandelion from four to six times a day. At the eighth or tenth day a supply of cracked hemp seed should be given; it is of the greatest service in helping to make lighter the task of the parents.

R. Carwood.

A Letter from the Front.

A Soldier Sees His Bird in "Cage Birds."

Sir,—I think if there is anything looked forward to among the boys in the trenches it is the Blighty mail. Last week it brought an unusual pleasure to me when I opened my Cage Birds (which I can't do without), to find my Hedge Sparrow in the very attitude it used to pose in its cage and aviary. Let me thank you for this favour, which I did not expect. Some time before long I must give your readers the history of this fine specimen, which, strange to say, had myself and a cock Norwich Canary for its foster parents.

Some people think these birds have no song, but let them get one and see. If they are kept in aviaries they are a most interesting bird. This bird was sold through Cage Birds to Mr. J. MacDonald, jun., Glasgow, for a fair figure, and I trust is doing well for its now owner. However, all going on well, Bedford show shall not go without that interesting little exhibit, the Hedge Sparrow.

Wishing all fanciers, those facing our villainous enemy, and those in Blighty, every success.

Two Glorious Softbills.

The Redstart and the Nightingale.

Sir—Having kept and studied birds since I was twelve years old, I thought a few remarks about that graceful softbill, the Redstart, and our best songster, the Nightingale, would be welcomed by readers of Cage Birds. The Redstarts we should be seeing any day in early April (but the weather must alter greatly) at their favourite haunts, especially in parks where large oaks and old hollow whitethorn trees are plentiful. They are fond of old disused stone quarries, orchards where trees are old and hollow, and rivers fringed with willows, in which places their greenish blue eggs are laid.

Immediately they arrive the cock can be seen on the topmost branch of the oak or elm, singing his short and rather sad song, staying there a considerable time, and descending occasionally to feed on the small beetles, etc., near the roots of the trees. This is generally when he is caught, as he cannot resist the mealworms fastened to the net-trap set to capture him. But it is cruel and useless to catch him in May, as the hen is sitting by that time, and he generally sulks and dies. He can easily be kept, and will become finger tame if caught immediately or soon after arrival, and will soon sing.

Two years ago I caught an adult Redstart in April, and he sang within a week of capture, and continued singing for about six weeks. I moulted him in autumn, and afterwards sold him to that enthusiastic fancier, Mr. S. H. Mays. I have also supplied Mr. Teschemaker with pairs of these birds, which I believe were for breeding purposes, and should like to know if that gentleman was successful. Mr. Teschemaker says it is a fast declining species, and I must admit I saw less in 1916 than ever before.

The cock can easily be recognised from the hen by the white on his head, and his black throat and eye markings, also the deeper red on breast and sides. The young resemble young Robins and Nightingales very much, but the young 'Starts can always be distinguished by the constant movement of the tail.

The food I make up as follows:—Best ants' eggs, dried flies, best meat meal (not the sort sold by corn-chandlers for poultry), and crushed biscuits, made moist with grated carrot. About eight or nine mealworms daily, and gentles cleaned with sawdust, and when obtainable, all live food such as small beetles, live ants' eggs, wireworms, etc. In autumn, elderberries, red currants, etc.

Last spring I found two cocks apparently paired to one hen bird; the largest and best coloured cock bird was "boss," and they fought now and then, but both helped in feeding the young, which were in a hole of a willow.

When we have got the Redstart nicely on food, we must prepare the cages ready for our finest songster, the Nightingale; first by arranging all food vessels inside, and fixing a soft cloth front to the cage so as not to injure his beak and head. For perches I generally fix the bullrush (pokers) stems, cut in suitable lengths. These are nice and soft for the 'Gales feet, and can easily be cleaned by taking a layer of the stem away, leaving a clean perch for a few more days. These I find as good as anything, but failing these willow porches are good.

Some people differ as to the date of the arrival of Nightingales on our shores, but they arrive here (East Suffolk) on April 22 or 23, and a treat it is to listen to their song by the edge of a plantation or wood, chiefly where the hazel abounds. The cock arrives two or three days before the hens (at least they do here), and this is the best time to catch them. When fed on the food same as for Redstarts, a Nightingale soon becomes steady, and some will sing a few days after being caught, but Nightingales vary so very much in singing. Some require being kept rather dark, some with plenty of light, and others partly covered with a cloth, before they will sing.

About five years ago I was after a 'Gale or two in April, and had captured a good singing cock bird. I put him in my pocket, and was taking him to my box on the cycle, and on my journey I passed another 'Gale on full song, quite close to me. I stayed a bit to listen to his song, and I was astonished to hear the bird in my pocket singing loudly, and continuing to do so for fully half a minute. After he was on food he sang for several weeks, and proved to be the best songster ever I had. I once saw a tip given in Cage Birds that a few drops of clarified linseed oil mixed with the softbill food was beneficial to the birds, and I must say I have lost very few since using it myself.

The cock 'Gale can be picked from the hen if the following points are remembered:—Firstly, large bold eye, carriage more erect than hen, longer neck, and throat and breast much whiter than the hen.

Either the Redstart or the Nightingale will well repay his owner for giving him every attention, and will take mealworms from the hand in a very short time. The bird should be singing nicely before Christmas if fed judiciously, and will stand a good chance of winning on the show bench.

E. Gooderham.

(It need scarcely be pointed out that to catch a Nightingale or a Redstart in April, or to be found in possession of a "recently taken" bird, is an offence against the Wild Bird Protection Act of 1880, and that in most counties it is illegal to take these birds at any time in our country.—Ed., Cage Birds.]

Fighting the Red Mite.

Is "Killed" Oxalic Acid Really "Killing"?

Sir,—The little pest is evidently still an object of general interest, and I was pleased to see Mr. Whitaker's valuable contribution on the subject in a recent issue, and to note that it touched, though without solving it, a point not previously mentioned. It may be remembered that when the oxalic acid remedy was first brought forward I immediately called attention to the poisonous nature of the acid, and the habit of many birds nibbling off the whitewash, etc., and eating it.

The object of that letter was two-fold, to point out the poisonous effect of the acid, and equally important, to discover whether the effect of the neutralised acid upon the mites would come under discussion. Curiously enough in all the months that have elapsed no writer seems to have given a thought to this vital point until Mr. Whitaker mentioned it, and he, like myself, has nothing definite to say on the point. But does it not seem reasonable to suppose that when the acid is neutralised and rendered harmless to human or animal life it most probably loses its effect upon insect life? And if this is the case how can it be of any further utility to destroy the pest or in keeping it at bay?

It may be argued that there is the proof of practical experience that the pest disappeared in certain cases after its use. But as the pest seems to have been troublesome in each case before its use it seems to me that the explanation may perhaps lie in a little closer attention to the details of regular cleaning and more constant vigilance towards preventing the mites getting a footing, once it had become apparent that a thorough overhaul was a necessity. Beforehand, the vigilance may have been a trifle slack without being seriously negligent, but that slight laxity was all that was required to enable the mites to get the upper hand. Then the owner woke to fact, and afterwards there was just that little extra care in details which sufficed to keep the pest under, so that the extra care rather than a neutralised poison was responsible for the permanent disappearance of the mites. Given due care not to employ any solution that does not neutralise the acid there is perhaps very little risk in using it, but it would be of interest to know the truth as to whether any effect was produced on the mite by an acid which was neutralised, and, consequently, no longer generally poisonous.

At the same time I do not think the use of any chemical of any kind in the coating used on the inside of the cage is to be commended, simple or otherwise, and can recollect the time many years ago when a certain powerful astringent came into favour for a few seasons to be used in this way for the same object, and for some seasons after egg-binding in the hens was unusually common, and enquiry frequently revealed the fact that this astringent had been used in this way. It may have been only coincidence, but such association makes one wary.

The Best of All Insecticides.

I have yet to find a more effectual deterrent to insect life than camphor, which has a fairly lasting effect, reckoning by days and not months, and is perfectly harmless. Unfortunately, it is practically quite insoluble in water, and some other solvent has to be employed, the quickest and best of which is spirit, which in its turn dissolves and spoils any spirit varnish or stain on the cage, but for general effect for the purpose employed it would be very hard to beat.

Claude St. John.

On Canary Breeding.

Some Hints for Novice Fanciers.

Sir,—While I have a few minutes to spare, and these opportunities are not very frequent at such times as the present, I shall have pleasure in giving the novice readers of our valuable paper, Cage Birds, a few hints on the rearing of Yorkshire and Norwich Canaries. I should like it to be understood that my remarks are entirely for the benefit of the novice, as I should not dream of trying to teach the champion, although it might be that there are some things that may be forgotten or overlooked even by the champions.

The most important point is the proper studying of the points of the birds before pairing them up, for it is very necessary that they should be completely suitable to each other. Some are inclined to think that as long as their birds come from Mr. So and So's stock that they are all right for pairing; but this is not always the case unless the birds are properly matched.

When there is an hour to spare, run the hen into the show cage, and examine her thoroughly, and if she possesses size, type, and quality, you will not have much difficulty in getting a cock bird to suit her. I mention size first because there are many who advocate medium sized hens, and I may say that I am a great believer in size. My experience tells me nothing beats a good little one better than a good big one. I shall never be convinced that it is possible to breed a giant from a dwarf, seeing what is wanted in the hen is a big frame.

In the cock bird the most essential points are a good round head, a well filled back and neck, and perfect fitting wings. What we should try to avoid in hens are bad shaped necks, narrow chests, and drooped tails. In cocks the principal defects are square heads, guttered backs, and scissor wings.

To avoid trouble in pairing the birds, I find double breeders are the best form of cages to use. If you draw the slide for about half an inch during mid-days, and the cock be given all the tit-bits in the way of food, the hen will soon be calling for her share. An important point is always to make use of the hen as soon as she comes into condition. It is very nice to have one's birds all coming at the same time, but considerable trouble may arise to get the hen paired in the proper condition.

When the hen is ready to nest leave her alone, do not meddle with the eggs, for thirteen days are not very long to wait; at the end of that time you may look at the cage bottom for egg shells, and if you will put you ear close to the cage and there are any young you will hear them squeaking. When the young ones have come still leave them alone, and you will be well paid for your patience.

For the food I always give during the first two days, the yolk of egg only, afterwards soaked bread and egg. I find this easy for the birds to feed with, and for the young to digest. I like to soak the hemp and rape seed to make it easier for the hen to crack, and it should be given them three or four times each day.

When the young are about ten days old I give them pin-head oatmeal and wateroress and when the young are separated from their parents I always give them pin-head oatmeal as a bone former in addition to the seed diet. I continue this food until the young are through the moult.

When birds come back from a show the first thing they should have is bread soaked in milk, and a few drops of Parrish's chemical food should be added to the drinking water. During the season never forget to hang the show cage on to the front of the cage, and when you go into the bird room, get a stick and teach the birds to run to the show cages. Once they have learned this they never forget it. As a final word I should like to say, let it be a pleasure to you to do all that is necessary for your pets, and you will be well paid for your troubles.

Linnets for Contest Singing.

How to Select and How to Feed.

Sir,—There seems to have been a lot of interest taken in the articles appearing recently in Cage Birds, under the heading of Linnets for Contest Singing. I have always been much interested in contest Linnets, and, having been among them for a good number of years, I venture to give my views and ideas as to the way to treat Linnets so as to get the maximum of song.

This is only to be done by getting them into high condition. I know that among contest fanciers, especially the novices, there is a notion that the most successful men at the contests use drugs or secret mixtures to make their birds sing. I have kept Linnets over 30 years, and though I have never myself sung them at contests I have been in touch with some of the most successful fanciers, and at one time used to visit all the contests and matches in my district, also the fanciers who kept contest birds. I have hand-reared Linnets, reared them under Canaries, caught them in their nest feather, and at all the four seasons of the year. I have studied them in their wild state and in captivity, moulted them, and won with them (not the hand or Canary-reared ones) in hot competition on the show bench, and with the exception of the first three issues I have never missed my Cage Birds. So I hope I am justified in offering to give a few hints how to treat Linnets for song.

In the first place I may say my only secrets are careful feeding and attention. I am well aware that some of the contest men use a drop out of the bottle, such as whisky, spirits of wine, and other decoctions, but these do more harm than good; they are only a fad, and quickly ruin the health of the most vigorous birds. I also know that some of the most successful fanciers who win all before them at the contests get the name of giving drugs to their birds, and when asked to give the secret away they do not deny using a drug, but just quibble out of giving a direct answer, for they like it to be thought that they have the knowledge of some secret drug or mixture, though at the same time they know full well that such are detrimental to the health of the birds, and therefore use nothing but clean seed and pure water.

If "A. J. B." or any other lover of the Linnet who wants to get his birds into high condition for singing will treat them in the following manner he will not go far wrong. Get the birds in the month of December; they are then strong and hardy, and will have the pure wild song. Select birds that are naturally steady, discard those that are unduly wild when their cage is handled, for even after the most careful selection it will be lucky if more than one out of a dozen turn out contest birds.

Put the birds into separate cages, make up a stock mixture of ¼ stone (3½ lbs.) English rape seed and a 3d. packet of good Linnet mixture; mix well together, and fill up the seed box whenever necessary. Give water to which has been added six or seven drops of syrup of buckthorn; leave this on for one day, then give pure water, and repeat the buckthorn in a few days. Then if the birds are going on all right discontinue the buckthorn altogether.

Keep the birds in a cool place, and on no account hang them above the level of the gas. Spray them and clean out the cages at least once a week. After you have got them nicely settled down start giving them the following seeds in order of merit:—Dandelion, white lettuce, and turnip seed; give about a thimbleful separately and on alternative days. These seeds should be given in a finger draw, but most of the back cages are made with two seed boxes, one for the stock mixture and the other for the tit-bits.

Under this treatment the birds should be getting their wings down and spreading their tails as they start singing; this is a sign of high condition. If they are not singing, and their beaks are pale in colour, their feather dry, and without the gloss which all birds carry when in good form, you may safely come to the conclusion that the position in which the birds are kept is unsuitable, or the temperature too high. They can stand any amount of cold, without draughts, but artificial heat upsets them in a very short time.

A quick moult is essential when they are kept for singing, and the quickest way to moult them is undoubtedly the forced moult. I know that some fanciers don't care for it, but I can say candidly that many birds would have been saved that die annually (through being stuck in the moult) if they had had a forced moult. If the moult is carried out carefully, and every care taken to guard against the birds taking cold, it is just as good, and in some cases better than if the bird had moulted naturally.

[Here follows a method of forcing birds into a moult, but we do not agree with subjecting birds to the treatment, so it has been deleted. —Editor.]

To force a bird into high condition just after moulting is apt to throw it into a cross moult, and this is very undesirable. When they are coming up in colour they may be sprayed regularly and given a pinch of dandelion seed occasionally, which will bring them on to song gradually. If the birds are to be kept for singing contests they must not be allowed to sing too much while at home; this will be accomplished by hanging the birds side by side—say if there are six birds—three in a row, top and bottom, and if this is done they will seldom burst into full song. Get a strange Linnet into the house occasionally, hang your own and the stranger at each side of the window, and if the birds are "proud," i.e., in high condition, they will drop their wings and sing at each other. Don't let the birds drink stale water, don't let them pick up stale seed from among the droppings on the floor of the cage, don't keep them in an over-heated small kitchen, don't neglect to spray them, and don't give drugs is the advice of

Rambler.

Nests of Birds, Poultry, etc., should be regularly sprinkled with KEATING'S POWDER, especially when hens are sitting. Don't forget to do this just previous to the eggs hatching, to destroy the Red Mite. Kills all insects. Harmless to everything else

A Believer in Rational Methods.

Sir,—I have read Mr. J. Hardman's article on how he manages Linnets. His first advice re Field Moulted Linnets. "Pink Linnets," as we call them, is good for anyone that has not a good bird to teach young Linnets, but the fancier that has a bird to teach the young ones in my experience is the one that will get more good birds, as a Linnet will learn the song of many different birds. I have known them take the Canary, Goldfinch, and Bullfinch notes.

As regards their moulting properly, if looked after when they moult their nest feathers, they will come up all right and come "proud." I know of last season's young birds that are winning in contests at both day and gas light matches. As to covering them up for a day or two so that they will sing, I think it is not the proper thing to do, as a Linnet in good health will sing all day long. I have been a quality singer for a good number of years, and I have yet my first bird to cover up for a day. I have won contests all over Yorkshire and Lancashire, and when I have travelled a long journey the first thing I do is to take the birds out of their box to let them have light, as in my experience it takes pride off birds when they have been covered up too long.

I have been to contests where they sing for time, and when they have put the birds in the window they have looked more like sickly birds than a smart neat vigorous bird as the Linnet is. With having been covered up all day long they do not sing, but splutter away as if they had no life in them. If you go to a quality singing contest you will see a different type of bird; they will show pride at each other, and sing like one hears them in the fields.

I feed my birds on summer English rape, equal parts, with a little linseed and white Canary, and find they do well on it, but all birds are not alike, so if I find one that takes one seed better than another, I give it what it likes, only I watch they do not get fat, as my experience is that a fat bird gets lazy, and does not sing so well as if kept in nice condition. I am writing this as my experience of a good number of years, and as a successful Linnet fancier, and am not claiming that I know all, so I would like to hear other fanciers' views on the matter.

Wm. Sissons.

Birds of Ceylon.

A Bird that Sews Up Leaves for a Nest.

Sir,—Perhaps you will be able to find a corner in Cage Birds for another letter on the birds of Ceylon. This time I propose to write about the Indian Tailor Bird, which more or less takes the place of our British Wren, both in habits and the marvellous powers it possesses for making itself heard, though so small in its person.

The Tailor Bird gets its English name from the manner in which it builds its nest, which is truly a wonderful structure. Two or more leaves of any big leafed tree or shrub are drawn together and neatly sewn up by the birds, forming a sort of deep cup, and this is lined with any soft material at hand. I remember finding just such a nest, only the birds had chosen the leaves of a particularly thorny shrub, which has a white flower just like that of the potato plant, and they had made a beautiful nest out of the extremely prickly leaves.

Whether this kind of shrub was chosen because of its prickly nature, for the purpose of keeping off any inquisitive intruders, I cannot say, but I, for one, like to think that it was so. The leaves were beautifully sewn together, and the nest was lined with the downy seeds from a kind of dandelion, which, though very useful for the Tailor Birds, is the planter's "bête noir," as the seeds blow about, and it is a hard weed to get out, owing to the length of its tap root.

The nest contained two greenish-blue eggs with chestnut and darker spots, more spotted at the larger end. I am sorry to say that the birds deserted, owing, I think, to the too frequent visits of coolies, who were pruning and weeding near the nest. I took the whole nest to my bungalow with the two eggs, which I blew, but it did not last long, for as soon as the leaves withered the whole structure fell to pieces. They are about the cheeriest birds I know, and love hopping about the creepers growing up the verandahs of the bungalows out there, and their merry "chink chink, pinch'em pinch 'em" is a cheery thing to hear first thing in the morning and last thing at night.

The Tailor Bird is not what you would call a neat bird, and always looks to me as if he had put his clothes on in a hurry, as he is ragged-looking fellow. He is olive-green on the back, with a dull chestnut top to his head; under parts a dirty greenish white; tail green and long, and generally stuck straight up and wagged from side to side when the bird is giving vent to his loud metallic notes.

His flight is laboured, owing, I think, to his long tail, which seems more of a hindrance than a help, and when on the wing the bird looks for all the world like a ball of fluff, with one end hanging loose. A closely allied species to this bird is the Ashy Wren-Warbler, an interesting incident about which species I hope to write next week.

T. E. Tunnard (Lieut.).

The Federation of Roller Clubs.

Hun Names for Song Tours.

Sir,—Without wishing to enter into this controversy, I should like to ask whether the ingenuity of English Roller fanciers is not equal to inventing English terms for the tours of their favourites. In a letter in Cage Birds of March 31, the German word "Glucke" is used over forty times, and there are other terms such as "Aufzug," etc., cropping up from time to time.

Onlooker.

A Matter of Rival Clubs.

Sir,—Kindly grant me a little of your valuable space again to reply to Mr. Hill's letter, re the Federation of Roller Canary Clubs. Mr. Hill says I am confusing the point at issue with the ring question. I do nothing of the kind. I pointed out to Mr. Hill the action the B.R.C.C. and M.R.C.C. had taken, and I am firmly of the opinion that if they had not taken the course they did, the rule Mr. Hill objects to would never have been brought forward at all; it is simply a case of "reprisals."

Mr. Hill states that they did not debar birds out of the contest, but only out of the two young bird classes. Quite so, but what earthly use are the remaining classes to the fancier who wishes to exhibit young birds of his own breeding in their proper classes and pays an increased price for his rings? He might just as well keep his money and his birds at home. I contend that their action did debar a lot of birds out of the contests entirely.

Mr. Hill states that it would have been a great consideration financially, and to the advantage of the club holding the contest, to agree to the B.R.C.C.'s proposals and confine the classes to B.R.C.C. rung birds, as it meant anything from 50 to 100 entries. What would have happened had we done so? We had at the last contest 194 entries in the two young bird classes, practically all P.R.C.C. rung birds, so that to have debarred these birds out in favour of B.R.C.C. birds (and Mr. Hill's estimate is a high one) would certainly have been a consideration financially, but we should have been on the wrong side of the hedge.

Mr. Hill suggests that I betray a desire to see the Fancy divided into two hostile camps. I do not. I am quite as anxious that all should be united as Mr. Hill is, but I consider the actions of certain clubs in the past two seasons, at any rate, have not been conducive to good fellowship, and if they fight with certain weapons they must be prepared for other people using the same kind. Mr. Hill says he has used his best endeavours to induce the M.R.C.C. to join the Federation, still he does not wish the necessary reform taken out of the hands of the B.R.C.C. That, Sir, is rather strange reading. He says he will use the Federation rings, and then claim the "liberty" and "freedom" to show his birds where and when he pleases. Exactly. He is claiming just the privilege they have denied to other people, and I believe if the B.R.C.C. had granted that privilege in past seasons, until an amicable settlement had been arrived at, the "drastic" rule would never have been heard of.

R. Barnett.

[A portion of this letter, consisting of hearsay evidence of what is said to have been done at a committee meeting of one of the clubs concerned has been deleted. Resolutions passed in committee should only be made public at the desire of the committee as expressed in Club Reports sent by the hon. sec. for publication.—Editor, Cage Birds.]

More About the Various Gluckes.

Sir,—Mr. Willows is altogether wrong in his assumption that I admitted his version was substantially correct. What I did—and anyone can prove it for themselves by referring to Cage Birds—was to accept his word that he personally knew nothing about it. That statement does not include his fellow members.

I am quoted as having written that Bell Glucke was Water Glucke. If Mr. Willows reads again, he will find there was an addition, which altered the whole meaning. I still contend my version is correct. I am submitting a bird to the Leeds members to prove it. I am fully aware that it is brought with a groundwork like Hollow Glucke in some cases, but in my opinion that is not half so pretty and musical as with a groundwork of scale good Water Glucke. I have been breeding Roller Canaries, on and off, for twenty-two years, and I think I should know something, at any rate, about it. Years ago, in a translation from an article in the "Allgemeine Kanarien Zeitung" I remember reading, under the heading "Gluckes," that one had to distinguish between Hollow Glucke, Bell Glucke, Water Glucke, and Glucke Roll. The Water Glucke was given as possessing silvery sounds, "glokloklok, lukluk luk," in quick succession, as you get when you empty a bottle of water. The Hollow Glucke was compared to the glucke of the house fowl calling her chicks, the rippling, watery, or silvery sounds being missing. This would be "cluck-cluck." The Bell Glucke was given as ending with the long vowel "e," "gluegluelue lue." (Pronounce the "e" as in Tee.) This was stated to be more beautiful when the "e" was the more metallic. It will easily be seen that the Bell Glucke, at its best, has for groundwork a tour more nearly resembling the silvery or metallic sounds of the Water Glucke than the sound of the Hollow Glucke. In this description I contend the bell-tongue sound is represented by the letter "l." The "ee" the ring. The "g and u" giving the watery groundwork. The bird I shall submit at Leeds brings the tour both ways, and I know which the musical ear will like best.

Mr. Willows tries to show that the Federation "drastic" rule is in operation now, because one or two clubs have joined since the formation. I presume they have pleased themselves, and would suggest they have joined because they know upon which side their bread is buttered. Depend upon it, if these clubs had thought the cause of the Federation was a lost one, or unjust, they would not have joined. The Federation will thrive because its rule is democratic.

That small word "we" is causing Mr. Willows some annoyance, but as my word is not good enough I will not occupy space in dealing further with it.

In the course of this correspondence I have been practically accused of hitting below the belt; now my resignation, it is suggested, "was a planned job." I am not out to take all the virtues in Christendom upon my shoulders, but I do value my name and honour. It has always been possible for one to be in membership of more clubs than one, so that by resigning from one club it does not follow you forsake the Federation. Mr. Willows says I will not answer his question re the B.R.C.C., but omits the qualifying sentence. If he will give the particulars asked for, and declare himself a champion of its constitution, I will guarantee him an effective reply.

In conclusion, Sir, I thank you for allowing me to monopolise the space I have, and would point out that this is my last letter with regard to anything further Mr. Willows may write.

A. Montague.

CANARY QUERIES

Answered by CHARLES ST JOHN

ARRANGEMENT OF STOCK.

B. B., Pendlebury.—(1) I take it you mean the best results as regards numbers bred, and with the appliances at your disposal I do not think you could do better than utilise the double breeders as single breeders, with a hen in each end, and use nursery cages to hang on the fronts for mating the cocks and weaning the young, running one cock with two hens in each case and leaving the hens to hatch out and rear the young by themselves, reserving the remaining double breeder with the slide removed as a small flight in which to run the young when they are ready to take from the nursery cages and cater for themselves, for a week or so, to get a little more used to the use of their wings before finally transferring them to the large aviary. This cage might easily suffice for all the broods as the season progresses, as, being fung, there will be no objection to mixing the broods at this stage. Divide the larger aviary in the centre between top and bottom, making two compartments, each 9ft. by 2ft. by 2½ft. high, and utilise these as stock cages wherein the birds may have a fair amount of wing exercise until fully grown, or it becomes necessary to cage up the cocks for training. After the moult these compartments may be used as winter flights, the cocks which are to be kept for stock being in one compartment and the hens in the other. The four reserve hens you should keep two in each of these compartments, and in case they are not required in the breeding cages they will be useful in showing the first broods of young their way about when first introduced. (2) If adopted, the arrangement advised in No. 1 would put this question out of order. But if you chose to convert the large aviary into a general breeding cage, if it were divided up into six compartments it would scarcely be worth while trying to keep more than one hen in each. Two might succeed provided they were both of a very sociable temperament and in good normal breeding condition, so that they were too exclusively bent on their domestic affairs to worry about the presence of each other, but whilst you were acquiring this knowledge the hens may be making a bash of things and ruining the prospects for the season. With one hen in each compartment two cocks might suffice to run with them, putting them to nest alternately. If two compartments were made into one you might run two hens and one cock in the space, fixing up four or five nesting sites. The whole aviary divided into two compartments would allow of three hens and one cock being run together in each, for which arrange five or six nesting sites. This would be the most economical arrangement, as the whole aviary would not well accommodate more than four hens and one cock, with six or eight nesting sites. (3) If the aviary is in a fairly quiet place, where the birds are not likely to be disturbed by persons passing frequently close by it and not too much exposed to curious gazers, and also if you can arrange around it at suitable intervals openings in the wires similar to open doorways, I should much prefer the wicker cage-like nesting sites hung on outside to boxes or pans hung inside. But if the above conditions are not available inside nests would be best. (4) If the birds were allowed to breed in the breeding cages for a month or so, and then turned into the aviary together, say, about the end of May or in June, which would probably be after the first broods were got out of the nests, the hens would be practically certain to resume nesting, some casually, and others more or less regularly. But what would be done with the first round of broods? Frankly I fail to see any useful purpose to be served by thus hashing up the breeding stock just as soon as they have got well under way, and without some very definite cause you would be well advised to avoid it.

GREEN FOOD WHEN MOULTING.

Wales.—Nasturtium blooms may be given to Canaries whilst moulting, with perfect safety, as also may the blooms of marigolds. Both these blossoms are often given to assist the birds to moult out a good colour when the orthodox method of colour feeding is not desired for any reason. If eaten freely by the birds they will undoubtedly assist in bringing out the colour-fed birds a rich tone. Rattails, full of the half-ripened seed, are also quite safe to give, and beneficial rather than otherwise, and the same remark would apply to seedy sprays of chickweed and shepherd's purse, which may all be given in moderation, and in preference to more succulent kinds of salads.

TROUBLE WITH YOUNG.

Perplexed.—I am inclined to think that the cause of your young birds dying in the manner you describe is due to some item in the food supply which causes intestinal congestion, and that all that is needed to set things right is a slightly more laxative dietary. You mention nothing about green food, and quite possibly it is the need for this item at a rather earlier age than is generally advised that is wanted. With future broods begin on the morning of the third day to give a little green salad, watercress, seedling chickweed, or groundsel, the latter for choice if you can get it large enough to be just budding; then give the tips, which are composed mostly of the flower buds. After this time give a little fresh green food each morning and afternoon, and regulate the quantity by the condition of the young. So long as there appears any tendency to impaction of bowels you need not fear you are giving too much. It would also help to remove this trouble if you slightly sprinkled the soft food with raw sugar for a day or two about the middle of the first week after hatching, and if you now have any broods that are beginning to show signs of the trouble just touch the vent with a microscopic drop of warm castor oil on the tip of a bird's wing or tail feather, and add to the drinking water ten drops of lemon juice and a crystal of sulphate of soda the size of a small pea for one day, in addition to starting at once with a little green salad, as named above. If this does not prevent a recurrence of the trouble at once, please write again, and give the fullest particulars of your dietary and how you prepare your soft food.

BACKWARD CONDITION.

B. G. A.—Certainly, in all ordinary circumstances the present time may reasonably be regarded as the correct one to mate birds up for breeding, but notwithstanding the theory, you would find in practice that it is utterly useless mating birds that are obviously out of condition and which show no desire for nesting, no matter how far the season may be advanced. You cannot make birds settle down to the duties of nesting which have no desire to do so, and until they have this desire they are better unmated. Had you said how you had been treating them all through the winter season I might have arrived at some idea as to the cause of their backward condition. But, any way, a week or two of the following treatment should speed them up a bit. In addition to the staple diet of three parts canary to one part summer rape, give separately a small teaspoonful of the following seed mixture every second day: Two parts, by measure, each of hemp and niger, one part each white millet and black rape, a half part each broken groats and teazle, and just a slight sprinkling of yellow mustard and linseed in the bulk. In the alternate days give a similar quantity of egg food, with a third of a teaspoonful of a mixture of equal parts maw, sesame, and gold of pleasure mixed in it. Give the hen two or three crisp young leaves of dandelion daily, and the cock a whole stool of this plant, grubbing it up by cutting through the root just below the surface and simply shaking off the loose soil and placing the whole crown in the cage for him to help himself. Keep them side by side in separate cages, or one in each end of a double breeder, and in a bright and healthy place, protected from direct draughts and the worst extremes of temperature we are having of late, until you see the cock paying regular attentions to the hen and calling to her, and she showing an eagerness to respond. This may not be until the weather gets a little milder, but nevertheless it will be quite the soundest policy to possess your soul in patience until that time arrives, then you may reasonably mate them with a fair chance of successful results.

HEN PLUCKING YOUNG.

Scotia.—This trouble is practically always the result of the hen coming forward for nesting again too soon, and if the cock has been allowed to remain with her during the period of incubation it is the best plan to try her without him when she commences to sit on the second round of eggs, which will often have the effect of keeping her back until the young are ready to leave the nest, or at least sufficiently forward to be safely transferred to a nursery cage, when the cock may be returned and the hen allowed to go on with another brood, and the young in the nursery hung on the front of the breeder, where the parents will finish the rearing whilst the other nest is in progress. If the chicks are very young and unfledged, and you have other hens with young about the same age or size, it is much the best plan to transfer the young to one of these with a very small brood, or even to distribute them among two or more hens, or you may give them to any available hen that has just failed to bring off a brood, in either case making the change in the evening when the hens have settled down for the night, leaving the culprit to go on with another nest if she will, and treating her as suggested above next time. Occasionally some good effect will be brought about by fixing a morsel of the rind of boiled pork or bacon, or a scrap of lean beef or mutton on the end of a perch, but whilst these methods are being tried the young may suffer more considerable damage, with no certainty of good results accruing. Should, however, the young be well fledged and nearly ready to leave the nest, then you should take the course of transferring them to a nursery at once, and supply the hen with a new nest pan and material to go on with another nest as mentioned above, and the cock will, as a rule, save the situation by looking after them until they are able to do for themselves.

DIPPING EGGS BEFORE HATCHING.

Doubtful.—No, under the present climatic conditions it is neither necessary nor advisable to dip the eggs before they are due to hatch. The process is often useful in hot and sultry weather when the air is very dry, but at this season more harm than good is likely to accrue from the practice. It is most unlikely that there would be any trouble on account of lack of moisture at this time, and there is a very considerable risk of getting the eggs chilled, which would be even more dangerous.

BREEDING QUERIES

F. H.—(1) There is no necessity to give every second day, in addition to the other seed mixture of which you sent sample, and a hopper always full of plain canary seed, a mixture of canary and rape, three to one. The canary seed itself will be sufficient for the staple diet, and in addition to this the seed mixture, a fair sized teaspoonful to the pair, every second day until the hen has gone to nest and began to sit, and a little egg or biscuit food on the alternate days. Give green food and other items as frequently advised here. When young are hatched you must, of course, give the egg food daily, in such quantity as you find the birds quite clear up a little before the next supply is due, and give it fresh at least twice a day. Green food, also fresh twice a day, should be added on the third or fourth day after hatching, and a little soaked rape and cracked hemp when the young are from a week to ten days old. For full and complete details about rearing you should get our Manager to send you a copy of "Canary Breeding for Beginners, 7d., post free. The mixture, of which you sent sample, is a good and well-proportioned one, but for general use as a staple a plainer diet is best, with these mixtures reserved for special purposes. (2) It is not quite the usual thing for a cock to cease singing when placed with a hen, but many of them do so, and provided they are in good health and condition it is no detriment to them as breeders. (3) I see no useful purpose to be served by keeping dried dandelion root in the water or available for the birds to peck at. It might prove a useful corrective when the birds are a little liverish, but normally healthy birds are much better without such constant dosage, even with "simples," so to speak. (4) I should not regard ordinary cotton wool as a very suitable nesting material on account of its liability to get entangled with the birds' toes and be dragged out of the nest. A properly prepared form of the article, such as the material on the market known as charpie, which is really a form of cotton wool, is much more suitable.

A NON-SINGER.

Mr. E. Ell.—As the time will now soon be getting on, your best course would be to get a more experienced fancier to have a look at the bird and tell you whether it is really a cock. I should be rather inclined to doubt it being so, but even if it is it would be very much out of breeding condition. You may try what the following treatment will do for it in a fortnight or so. In addition to the usual staple of three-to-one canary and summer rape, give a small teaspoonful of a mixture of equal parts hemp, niger, white millet, teazle, and broken groats, with just a sprinkling of linseed and yellow mustard in the bulk every second day, and on the alternate days give half a teaspoonful of any of the usual biscuit foods made slightly moist and crumbly with a few drops of sherry, and sprinkled with about half the same quantity of a mixture of equal parts maw, gold of pleasure, and sesame seed. Hunt out a little crisp young dandelion in warm corners, and give two or three leaves daily. In the drinking water add ten drops of lemon juice, four of pure honey, and as much chlorate of potash as will cover a sixpence, every second day for a week or so. If no signs of coming in song at the end of the first week, continue giving the latter for another week. Keep the bird in a bright and comfortable place, and not too high up near the ceiling.

LOSS OF VOICE.

E. S. H.—(1) Considering the character of the climatic conditions we have had this spring so far, it is no wonder at all that a bird seven years old, kept hanging in a window, has suddenly lost its voice. The only wonder is that it has escaped this effect of such surroundings so long. Keep it now in a fairly comfortable place, not necessarily overheated, but see that it is as equable as can be managed, and that it is quite free from direct cold draughts and sudden fluctuations of heat and cold. Then give a little biscuit food prepared as advised to "Mr. E. Ell" in this issue, every second day for a fortnight, and in place of pure water give it the following decoction two days in every three for a week, and every second day for another week afterwards. Place a small teaspoonful of linseed in a teacup and a piece of Spanish liquorice, the size of a hazel nut, fill with boiling water, cover, and allow to infuse beside the fire for half-an-hour or so, stirring occasionally until the liquorice is dissolved. Then strain off the clear liquid, add a small teaspoonful of lemon juice and as much chlorate of potash as will cover a shilling; stir well, and when cold give it in the drinker instead of plain water on the days advised. (2) No, it certainly is not too late to begin to breed birds this season. The season is exceptionally late this year, and the present is really quite early enough to begin, although many will probably have finished mating up before this appears. But that does not mean that it is too late for anyone else to begin. The late starters will doubtless show the best results at the end of the season this year. You could, of course, mate the cock Greenfinch with a hen Canary, but the young, if successful, would be Mules. On the whole, I think you might do better for the first season with a pair of Canaries of a hardy, easily-managed, and free-breeding variety. Rollers, Border Fancy, Norwich, or Yorkshire would all answer this description. The first-named are the best for songsters, pure and simple; the others are fancy breeds in this order: the smallest and palest in colour, the richest in colour and chubbiest, and the longest and slimmest of the most common and popular breeds. Make your own choice. Get a copy of "Canary Breeding for Beginners," 7d., post free, which our Manager would send you. It will keep you on the right track and may prevent disappointment in your first season.

BRITISH BIRDS, MULES AND HYBRIDS

Answered by H. NORMAN.

BREEDING REDPOLLS.

Redpoll.—Redpolls have bred in captivity, and if you give up your aviary to a pair you would probably succeed with them. They are birds that are seldom used in this manner, as they are so easily procured, but as pets and as a matter of interest, they are quite desirable. You can put them in at once, feeding in the usual manner until you are able to get wild food for them, when this should be given daily. Get a bundle of twigs and fix up in one corner of the aviary, and place in it an old Finch nest if you can get one. If not, use a nest box about 4in. square, surround it with twigs, and lit some moss and cowhair inside it. You had better have two or three of these in different positions, as they may not take to one. (2) I would advise you not to put the Linnet in with them. (3) It will add to your chances of success if you use egg food or some kind of soft food to assist in rearing the young. I would also advise you to make a free use of soaked seed; in fact, it is just possible they would rear on this if given fresh two or three times a day. You should also collect bunches of wild food, such as flowering grass, chickweed, dandelion, shepherd's purse, etc. Hang these up in the aviary and let them hunt it over.

STOCK MIXTURE FOR AVIARY.

Wales.—I presume you would like to keep the birds in your aviary with a view to some of them breeding. To do this you will have to make some changes. You have at present far too many cocks for the number of hens, and I would suggest that you remove the Bramblefinch, as this species is very erratic and liable at any time to cause a stampede among the inmates during the night, which would prove fatal to your chances if some of the hens were incubating eggs. I would suggest that you add about three more Greenfinch hens, a Siskin, and, if you felt inclined, a couple of Norwich Canaries. Do not put in any more Bullfinches, as they seldom agree together. If you manage your aviary properly you should be able to produce something during the season with the above collection. Put in plenty of perches, and a rough bundle or two of furze or branches of some kind, and make your nest boxes and pans as secluded as possible. Be liberal in your supply of building material, even if it makes the place look somewhat untidy, and collect as much wild food as you can; this assists in keeping the birds healthy and encourages them to nest. Staple food, three parts canary, two parts teazle, one part rape. A little hemp daily, mostly for the Goldies, and a fairly liberal supply of sunflowers, tit-bits of other seeds, two or three times a week.

FOREIGN BIRDS.

Answered by WESLEY T. PAGE, F.Z.S.

LOSS OF HEN ZEBRA FINCH.

Esperance. — You have the small consolation of knowing that you are not alone in your misfortunes; the winter has been so abnormal and prolonged that many experienced aviculturists have suffered similar losses. There are two sides to the question of separating the sexes, some practise it, and many do not, and it is not always, by any means, a remedy for the trouble, for unmated hens lay as the season approaches. An all-wire cage 30 in. long by about 18 in. high would give you every probability of success. For the Avadavats and Waxbills a cage 24 in. long should suffice, but Waxbills are very uncertain breeders in cages; nevertheless success is by no means improbable; but if you wish to keep both pairs together, then have one 30 in. long, an all-wire cage will do. Yes, I like cages without domes better than those with them. My advice is: Keep the Zebra Finches in a cage by themselves. For Waxbills, as they are such wee mites, the wires should not be more than 3/8 in. apart; ¼ in. apart would suffice for the Zebra Finches. A single nest will suffice for the Zebra Finches, and one for each pair for the others. The Zebras are not at all partial, and will use rush, box, or bark nest when they are in breeding condition. You must get a rush nest quite six inches in diameter in the circular part for the Zebras, a size smaller suffices for the Waxbills.

PARRAKEET REGURGITATING.

Indian Parrot.—The regurgitation of food and re-swallowing same is quite natural; when in pairs they do this, and then feed each other. In an unmated bird it may be taken as a mark of affection to its attendant, though in some cases it is to aid a faulty digestive system. Give ripe fruit (apple or banana) as well as seed, also see that grit and cuttlebone are regularly supplied; also a chunk of wood for mandible exercise. The following mixture would suit it well: Canary, white millet, oats, hemp, sunflower and safflower seeds in equal parts; add a quart of shelled monkey nuts and well mix. It would be well to give it one teaspoonful of fluid magnesia in the drinking water twice a week for a month, and then once a week for another month, to correct any digestive trouble there may be.

BLACK-CHEEKED LOVEBIRDS, ETC.

Nedia.—These have black cheeks, the front of crown is rich orange brown; there is a considerable amount of yellow and orange on sides of face and upper breast; throat, black; body, rich grass green; flights, brown; beak, reddish orange. The Black-cheeked is about the size of a Grey-headed Lovebird, but a little more slenderly built. They are not easy to sex, but the hen is a wee bit smaller, slightly less brilliant in colour, and usually has a longer hook to her beak than the male. If you follow these directions and also choose one bird with a flat crown and another with one well rounded, you should secure a pair. They have been bred freely in aviaries. For a nest receptacle a small barrel, or a box (12 x 8 x 6 inches), entirely closed, save for the entrance hole, should be supplied. They require leaves, longish straws, and some thin bark as nesting material; put this in the aviary and leave them to prepare it themselves. Present value about two guineas a pair. Not really noisy. Generally speaking, I consider Parrakeets and Lovebirds unsafe company for finches, though some take the risk, but they usually suffer loss in the end. The Gold-fronted Tui is an all green bird (quite a small Parrakeet), and a very pleasing one. They are hardy when once acclimatised. Present value 30s. to 50s. per pair, according to luck. They have proved very shy breeders up to the present, and require a small barrel or nest-box with a concave bottom in which to rear a family. All foreign species are uncertain of procuration at the present time; you must watch our advert. columns.

POST MORTEMS.

Mr. G. Yates, M.R.C.V.S., 1, College Road, Harrow, Middlesex, will examine and report upon dead cage birds for a fee of 1s. 6d. each bird; for reply direct, 2s. 6d.; analysis, 21s. The Post Office regulation is that bodies of birds must be sent at the letter rate of postage, and must be packed in hermetically-sealed receptacles which must themselves be enclosed in strong wooden, leather, or metal cases. If this regulation be infringed the packets may be destroyed by the authorities. **Any bodies sent to the office of this paper will be thrown away, and** if a fee is enclosed the loss will be the sender's.

GENERAL.

Answered by THE EDITOR.

PARROT OR COCKATOO?

Tim.—Your bird is a Rose-breasted Cockatoo, a bird sometimes, and wrongly, described as an Australian Grey Parrot. There is no such bird as an Australian Grey Parrot, and the only justification for the use of the name is that all Cockatoos are, of course, Parrots. To describe as a Grey Parrot a bird of such little monetary value as the Rose-breasted Cockatoo is misleading, if not dishonest.

HOUSE-MOULTED AND FIELD-MOULTED.

S. W. B.—A house-moulted bird is one which has been in captivity during at least one moult since it was caught. A field-moulted bird is one taken in the autumn after it has moulted its feathers in liberty, and which has not yet moulted in a cage. The reason for there being separate classes for house-moulted and field-moulted birds is that birds properly kept for a season or two are much better in appearance on the show bench than those which have been caged only for a short time. They are larger, better in plumage, and more steady, and the "field-moulted" classes were instituted to give owners of good birds which had not yet had time to improve by keeping an opportunity of competing on equal terms rather than show their birds against those which had been for a year or more under proper care. Very pleased to be able to help you with information; our columns are always open for that purpose.

AN AVIARY IN A BACK YARD.

H. M.—You could certainly construct an aviary in the yard adjoining your house, and if you will send details of the space available, and the size of the aviary you propose to build, with a rough plan of the yard, indicating the walls or surrounding houses, our expert will be very pleased to advise you fully.

THE POULTRY WORLD. . .

The up-to-date, efficient poultry journal. Every number grandly illustrated and full of practical articles by experts. Invaluable for the beginner and the amateur.

VARIOUS BIRDS.

WANTED, all kinds of singing birds, cash with Editor: Jones Aviaries, 126, Plaistow-rd., West Ham. (900)

CANARIES, Goldfinches, and breeding cages for sale: Martin, 18, Redgrave-st., Putney, S.W. (911)

YORKSHIRE Canaries, 15/- pair, cocks full song; the handsomest tame talking large Parrakeet, in cage, 30/-; pair Tovi Parrakeets, 15/-; wanted brindle Bull pup: Hayter, Naturalist, Southampton. (909)

SOUTH-WEST London Cage Bird Society invite all breeders and fanciers of Canaries, Mules and British Birds to join now, in time for Young Bird Show; send postcard for rules, to W. Lilley, 47, Parnley-rd., South Norwood, S.E., 25. (909)

TWO cock Bullies and two cock Greenies, nice colour, price 8/6 the lot; also buff Norwich cock, 1916, bred out in aviary, price 10/-; and yellow cock Canary, price 7/6; all carriage paid: Mumford, West-st. Aviaries, Stratford-on-Avon. (916)

GRAND large pair H.R. Missel Thrushes, 10/-; exchange for yellow Norwich or Yorkshire cock Canary; grand cock Chaffinches, F.M., 1/6, 2/-, C.M., 3/6, 5/-; hens, F.M., 1/-, C.M., 1/6, 2/-; splendid cock Robin, 2/-; Thrush, 1/6: Weaire, Snodland, Kent. (911)

CHAFFINCHES, Greenfinches, Bramblefinches, 150 F.M., selected cocks and hens, 1/6, 3/-, 5/6 each, greater part caught in January, well on seed, and reliable pairs, suitable for aviaries, 3/-; wanted 1916 yellow Norwich cock, must be large and good type; all birds packed free, carriage paid to destination; rare feathered Blackbird, black and white, beauty, 10/6: Dalby, Brandsby, Easingwold, Yorks. (907)

WANTED.

WANTED Canaries all kinds; state prices: Andrew Dawson, Cumbernauld-road, Glasgow. (898)

WANTED, all classes of Canaries, best price paid: E. Cheshire, 34, Crawford-st., Bradford. (906)

WANTED, two hen Golden Pheasants, young birds preferred: Barlow, 19, York-rd., Kettering. (909)

SIX Skylarks wanted, will give 2/6 each for good birds: Keegan, 35, Upper Ormond Quay, Dublin.

WANTED, a house-moulted hen Blackcap, for breeding only: Wadsworth, 82, Benedict-st., Bootle.

NOTICE, wanted Canaries, British birds, pigeons, rabbits; state price: Brain, Aston, Birmingham.

WANTED Canaries, highest price paid for all classes: W. Powick, Eastfield Cottage, Dewsbury.

WANTED, colour-fed 1916 Canaries, best prices given; deposit system preferred: H. Jinks, 2, Bramall-lane, Sheffield. (909)

WANTED, 1,000 Canaries, all breeds; reasonable; no risks, I send cash with order McKeand, Hamilton-place, Castle Douglas. (904)

WANTED, all kinds of Canaries, for prompt cash; also British, all kinds: Thos. McCrystal, 16, Lanflands-rd., Govan, Glasgow. (904)

WANTED, any quantity young rabbits, adults, cavies, mice, bantams, etc., best prices given: Kremner, 104, Tib-st., Manchester. (915)

WANTED, Canary, yellow or variegated, good songster, cheap; tame preferred; full particulars: Magee, Manse, Stranorlar, Co. Donegal. (916)

WANTED, Norwich, York hires, Borders, Crests, and British, all kinds, send lowest prices: A. Leitch, East End Bird Mart, 520, Gallowgate, Glasgow.

BULLFINCHES, 2/9 per pair; Goldfinches and Siskins, 3/- per pair; Canaries, either sex, best prices given: Frank Sparks, Bird Dealer, 200, Overgate, Dundee. (765)

WANTED, two carrying cases and Norwich show cages or cases, only to hold three, good condition; Cosy Carriers preferred: James, 33, Baronet-rd., Tottenham, N. 17. (914)

WANTED, birds, all kinds, will pay per pair, Goldfinches 3/6, Bullfinches 3/-, cock Linnets 7/- per doz.; common hen Canaries, 2/6; Chaffinches, 6/-: Spark, Bird Dealer, West Ealing. (916)

WANTED any quantity Norwich, Yorkshires, and Roller Canaries, cocks or hens; also singing cock Mules, any variety Goldfinches, Bullfinches, Linnets, etc.; best prices given: Kremner, Tib-st., Manchester. (915)

WILL buy for cash, any quantity cock Goldfinches, Siskins, 33/- dozen; hens, 18/-; Goldfinches, Linnet Mules, cocks 7/6, hens 2/-; hen Canaries, large 3/-, small 2/6; good prices paid for cock Canaries; all kinds Britisb birds: Helyar, 55, Patmos-rd., North Brixton. (916)

NOTICE! WANTED

ANY QUANTITY

of natural colour and colour-fed Canaries of all varieties, and Mules of both sexes; will give from 12/- to £1 pair for good birds; cock Goldfinch Mules from 7/- to 10/- each; hens 2/3 each; cock Linnet Mules from 6/- to 10/- each; cash on receipt of birds, or deposit with "Cage Birds"; straightforward dealing only; Bankers, London City and Midland: Power and Russell (est. a century), 77, Sclater-st., Shoreditch, E. (827)

SALE OR EXCHANGE

Mainly Canaries.

LOVELY python skin, 9ft., exchange birds, Norwich preferred: Beattie, Scholes, Leeds. (915)

NICE buff Norwich cock, 9/-; exchange Yorkshire hen: Heads, 22, Bainbridge-ave., Willington, Durham.

EXCHANGE, Grey-Crested hen, value £1, for a Yorkshire cock; approval: R. Barber, Draycott, Derbyshire. (914)

WILL sell, or exchange, green Cresthred cock, 1916, for Crest or Crest-bred hen: Boyd, 10, Glasgow-rd., Cambuslang. (913)

GOOD cock Hawfinch, field-moulted, sell or exchange two Roller hens or Borders: H. Sayward, King's-rd., Halstead, Essex. (916)

GRAND type Norwich hen, buff, bred 1916, 9/-; exchange Goldie or Linnet Mule, must be pure wild song; yours first; approval: Clarke, 74, High-st., Sydenham. (914)

EXCHANGE grand bred short racer cock, 1916, for two hen Canaries, 1916; approval both ways: W. Austick, 2, Kates-terr., Nornabel-st., Hull. (914)

BUFF marked Roller cock, 10/6, or exchange two Roller, Norwich, Yorkshire, or Border hens; new book on rabbits, 3/6, or exchange one hen: H. Kay, 21, Portland-rd., Blackpool. (912)

LONG yellow Yorkshire cock, winner 1st, in breeding condition, sell 25/-, or exchange Goldfinches for muling or Norwich preferred; offers, yours first: William McCormick, 13, Townhead, Irvine, Ayrshire.

H.-M. COCK Linnet, buff Norwich hen, proved mulers, 12/-; exchange cock Norwich, full song; offers; cock Greenie, hen Bullie, paired; cock Greenie Mule, 12/- lot; approval: Jones, Epworth, Ffynnongroew, Chester. (916)

Mainly British.

COCK Linnet, H.M., mules last year, 7/6; exchange Roller cock, or offers; Dawson, 21, Nelson-st., Scarborough. (913)

COCK Goldfinch, bred Mules in outdoor aviary, 8/6; exchange Norwich cock; yours first: Miss Hedges, Confectioner, Wallingford. (913)

WILL exchange house-moulted Yorkshire hen, good condition, for a cock Goldfinch: Bradley, 20, Sandbed-rd., Belper, Derbyshire. (914)

EXCHANGE, heavy boots, 9/-; Crystal Palace aviary, genuine, value 15/-; both for Canaries; offers: Topp, 39, Toungate-st., Poole, Dorset. (912)

WILL exchange, two steady pairs Bullfinches for cock and hen Canaries, or sell hens and cock, 2/6 each: Pearson, 20, Fourth-st., Easington, Durham.

EXCHANGE H.M. cock Goldfinch and Linnet, for Yorkshire cock, or two Norwich hens; approval; yours first: Cooper, 6, Castle Houses, Plasmarl, Swansea. (912)

THREE cock Linnets, fine singers, make good contest singers, with cage, 6/6 each; one big bird, make fine muler, will moult winner, 7/6, with cage, or exchange Canaries; stamp reply: Porrill, 8, Doncaster-rd., Barnsley. (904)

Mainly Foreign.

TALKING Rosy Cockatoo, 35/-; will exchange for Canaries: Stapleton's, 123, East-st., Walworth, S.E. 17. (912)

Miscellaneous.

EXCHANGE, good sledge, for melodeon, or sell 10/-: F. Hour, Bank, Barnard Castle. (900)

DOUBLE Breeding cage, loose fronts, enamelled nests, etc., pair Canaries, £1 2s. 6d.; exchange: Letall, Whittlesea. (912)

EXCHANGE one sitting pure Ancona eggs for hen Canary, or two sittings for cock Canary: Connon, Hatton, Aberdeenshire. (978)

WILL exchange pair of gent.'s brown button boots, size 10, for Crest or Coppy cock: Alex. Prentice, Newport, Isle of Wight. (909)

SIX 1915 cock Linnets, mulers, for Roller cock, or lady's boots, eights, sell 4/- each; yours first: 115, Wilson-st., Girvan, Ayrshire. (915)

GENT.'S strong cycle, almost new tyres, free-wheel and brakes, 37/6, bargain; offers, birds: F. Chadwick, Tool Dealer, Wrexham. (913)

MANDOLINE, richly inlaid mother of pearl, leather case, 17/6, cost 35/-; offers, birds, cages: F. Chadwick, Tool Dealer, Wrexham. (913)

WOOD, Medical Specialists, 20, Louis St., Leeds.

A POST CARD ONLY

You cannot hold your own in life's battle if weak, worn, or easily jaded. Periodical attacks of moodiness, languor, despondency, depression, and groundless fears mean nerve troubles and lead to brain fag, impaired memory, and unfits one for study, business or pleasure. The chosen ones in every walk of life are the alert, the bright, and the intelligent, nature's natural gift, but marred for lack of a little knowledge. A post card to the Useful Knowledge Publishers, P.O. Box 94, Bradford, will put you in possession of a 48-page book, neatly bound, of valuable information, and will be sent post paid free of any charge whatsoever if you will mention CAGE BIRDS. A little knowledge saves much medicine. [Copyright.

Music.

GRAMOPHONE, 35 guinea model, beautiful drawing-room cabinet, inlaid Sheraton, height 4 ft., record cupboard enclosed; quantity celebrated records; approval willingly; accept 7 guineas: 3, Aubert Park, Highbury Park, London, N.

An up-to-date booklet, treating fully on all subjects connected with profitable rabbit keeping, including Housing, Hutches, Feeding, Breeding, Mating, Rearing, Exhibiting, Management, Diseases, Varieties, etc. Price 2d., from any of our Nutshell agents, or 2½d., post free, from CAGE BIRDS, 154 Fleet Street, E.C.4.

BOOKS ARE STAR SHELLS

THAT LIGHT THE WAY TO SUCCESS.

Our Handbooks Help Novice and Expert Alike.

CANARY BREEDING FOR BEGINNERS. By CLAUDE ST. JOHN.—An exceptionally helpful, intensely practical and instructive handbook for beginners and tyros at Canary Breeding. It contains 116 pages 7in. by 5in., and is profusely illustrated and contains innumerable hints helpful to all young bird-keepers. In this book the reader is instructed how to pair up the stock birds, how to cage and feed them, how to test the eggs, what to do when the young birds are hatched, and so on until the birds are old enough to be put on the show bench. It is interesting from cover to cover, and is by far the best 6d. handbook on the subject ever published. Price 6d., post free 7d. Cloth bound, 1/2.

AVIARIES, BIRD-ROOMS AND CAGES: THEIR CONSTRUCTION AND FURNISHING.—A practical, up-to-date guide on this most interesting subject; written and illustrated by "Cage Birds" artist-in-chief, Mr. H. NORMAN. It is fully illustrated with ten full-page photographic plates and numerous helpful sketches. Bound in cloth Gilt, price-2/-, post free 2/3; paper board covers 1/6, post free 1/8.

BRITISH BIRD MANUAL. By H. NORMAN.—Published in two parts—"Hardbills" and "Softbills." This latest and most up-to-date manual on British birds has been written and illustrated in colours, and black and white, by "Cage Birds" artist-in-chief, Mr. H. NORMAN. The author, who has made a life-study of the subject, gives in these volumes information and hints of the utmost value to all keepers of British birds. Part I., "Hardbills," deals with the Finches, their keeping, feeding, showing, etc.; and Part II., "Softbills," Blackbirds, Thrushes, Larks, Buntings, etc. Price 1/- per part, post free 1/1.

FOREIGN BIRDS FOR BEGINNERS. By WESLEY T. PAGE, F.Z.S., etc.—A most useful manual for all keepers of Foreign birds. It will be found indispensable information of an entirely practical nature—by a life-long specialist—on the keeping and feeding of the more common and popular varieties of foreigners. It contains illustrations in colour, and black and white, of some of the well-known species, and should be purchased without delay by all fanciers who go in for this most interesting branch of bird-keeping. Price 1/-, post free 1/1½d.

HOUSE'S CANARY MANUAL. By C. A. HOUSE.—5th Edition. A thoroughly practical guide to the general management and breeding of Canaries, dealing fully with the breeding, etc., of every member of the Canary family, including the Roller (or Singing Canary). An illustration of each bird, by the master Canary artist, Mr. H. Norman; exhaustive chapters on aviaries and cages, breeding procedure, moulting, exhibiting, diseases, and seeds—a compendium of knowledge. Price 1/-, post free 1/2. Cloth bound, 2/2.

THE SECRETS OF HYBRID BREEDING REVEALED AND EXPLAINED. By many notable Mule and Hybrid Breeders. Among the contributors are such well-known breeders as Messrs. R. Bolton, W. H. Vale, C. Houlton, C. J. Ward, J. Beswick, G. Lander, T. H. Kinch, T. Smith, etc. This Handbook, which contains 212 pages, 7in. by 5in., is brimful of the most practical information on the highly interesting subject of Hybrid breeding. Being written by successful breeders, it is quite invaluable to everyone who would also be successful in his hobby. Price 1/-, post free 1/2.

THE STOCK BOOK, OUR INVALUABLE BREEDING ROOM REGISTER. Compiled by G. E. WESTON. The stock book which makes bird breeding easy. The book no breeder of birds can really afford to be without. Everything that a cage bird breeder needs to assist him in keeping his accounts is found in its pages. A large number of emergency hints are also given for the assistance of the fancier during the breeding season. Price 6d., post free 7d.

NORWICH CANARIES. By C. A. HOUSE.—The latest and most practical manual on this popular variety of Canaries. It tells the fancier all that he needs to know to enable him to become successful as a breeder and exhibitor of the Norwich Plainhead. The chapters on "Forming a Stud," and "How to Produce the Ideal," are worth the cost of the whole book many times over. Price 1/-, post free 1/1.

PET RABBITS, CAVIES AND MICE. By GEORGE GARDNER.—A complete and practical guide to the proper management of Rabbits, Cavies, and Mice. The information given in this handbook is thoroughly up-to-date, and deals with the housing, feeding, exhibiting, etc., of these popular pets. Many illustrations of champion rabbits, etc. Price 1/-, post free 1/1½d.

SEEDS, FOODS, AND WILD PLANTS FOR CAGE BIRDS. By various Leading Authorities. A comprehensive and complete manual on this most interesting subject. In it will be found information on the various seeds suitable for all varieties of cage birds, their food values, uses, etc. Descriptions and illustrations of the various wild plants that are indispensable to the successful keeping of all cage birds are fully given. Price 1/-, post free 1/2.

SEPTIC FEVER OR CANARY PLAGUE. By R. H. CLARKE, M.D., M.A.—A very useful booklet on this subject, which should be found in every bird lover's library. Dr. Clarke has given the subject of his book very special study. Price 6d., post free 7d.

Other Books obtainable from us—

BIRDS OF THE COUNTRYSIDE. By FRANK FINN, B.A., F.Z.S.—A handbook to the wild life of all our familiar British birds; their appearance and habits accurately described. With 12 beautiful coloured plates, and 118 photographic illustrations. A charming gift book. 6/4 post free.

PETS, AND HOW TO KEEP THEM. By FRANK FINN, B.A., F.Z.S.—Gives the correct method of housing, feeding, and managing every kind of pet; all sorts of animals are dealt with—monkeys, dogs, cats, lizards, tortoises; also gold and other fancy fish, while there is a large section devoted to birds. Contains many coloured plates and illustrations from photographs. Another charming gift book. 5/4 post free.

EGGS AND NESTS OF BRITISH BIRDS. By FRANK FINN, B.A., F.Z.S.—A most interesting Handbook for all lovers of British birds, containing coloured reproductions of 154 eggs from nature in 20 plates, and 74 eggs in half-tone and other illustrations. Price, 5/4 post free.

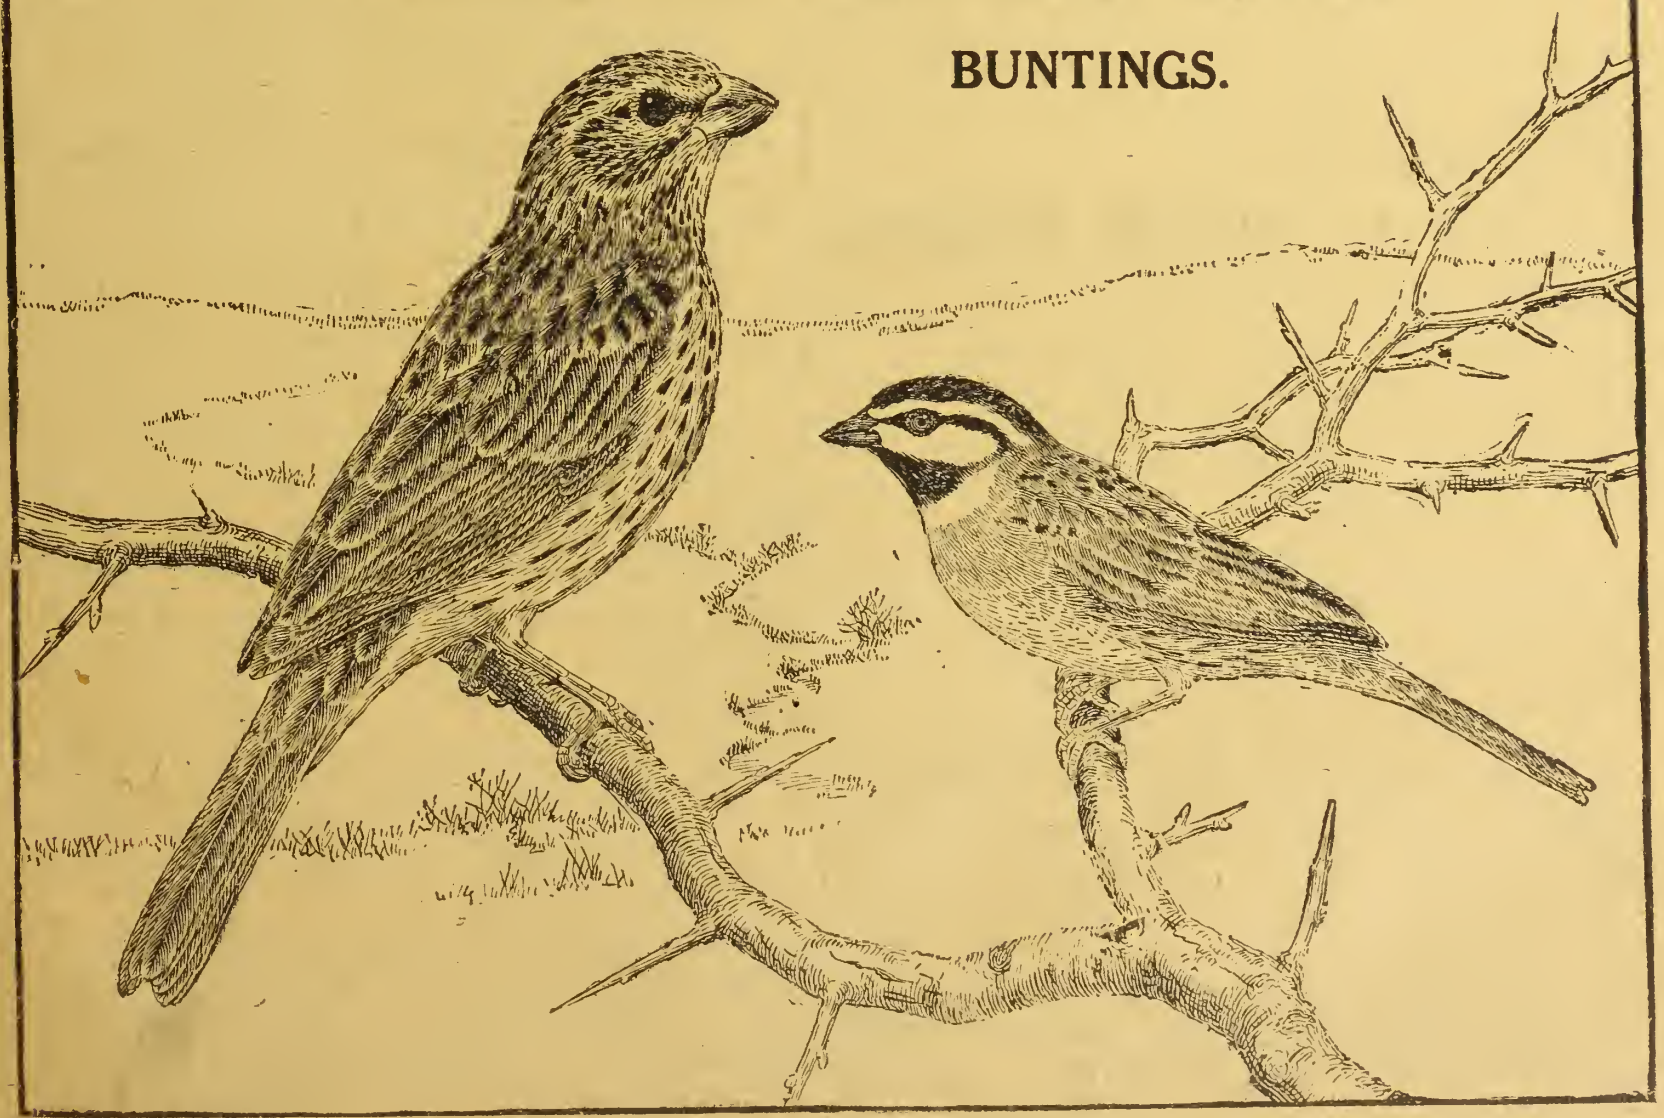
BEAUTIFUL BRITISH BUNTINGS.



The two beautiful specimens of British Buntings here shown are the property of Mr. H. J. Chick, Nottingham. The bird on the left is the magnificent Corn Bunting, winner of 1st Prize at Sheffield Show, and many other prizes. The other is the Charming Cirl Bunting which took 2nd Prize at the same Exhibition.

F. CARL, Publisher, 154, Fleet Street, London, E.C., 4.

Advertisement Charges.

One Halfpenny for each word up to 48, 1d, per word afterwards. Name and address to be reckoned. Minimum, 12 words 6d.

IMPORTANT NOTE.—Two or more Advertisements coming from the same advertiser, even if sent in different names, are reckoned together, and are charged at two words a penny up to 48 words; after that 1d. per word. No single advertisement, even if accompanied by others, will be charged at less than the minimum price, viz., Sixpence.

Headlines or Footlines, 9d. 1/-, 1/6, 2/-, 2/6, according to size.

The rate for displayed advertisements is 7/6 per inch. Rates for a series on application.

ADVERTISEMENTS UNACCOMPANIED BY CORRECT REMITTANCE WILL NOT BE INSERTED.

Postal Orders must be sent as far as possible. All moneys should be made payable to **F. CARL.**

The Proprietor reserves the right to refuse any advertisement, or to cancel any advertisement ordered for a series, at any time, without assigning any reason for so doing.

Advertisements must in all cases bear the bona-fide name and address of the advertiser, and no advertisement will be inserted if addressed to a receiving office, or similar place of call.

Advertisements close Tuesdays first post in each week, and should be sent to the Advertisement Manager, **CAGE BIRDS,** 154, Fleet Street, London, E.C.4. Terms for Display Advertisements on application.

ALWAYS USE "CAGE BIRDS" DEPOSIT SYSTEM.

We are not responsible for the statements made in advertisements, nor of the *bona-fides* of either buyers or sellers In all transactions the adoption of our Deposit System should be insisted upon

RULES.

1.—PROCEDURE.—The intending purchaser should send to this office the amount of the purchase (our deposit fee included), and at the same time he should communicate with the seller stating what it is he requires sent on approval. We acknowledge receipt of the deposit to both parties. In all cases the depositor should give his name and address, and also that of the vendor, and must write same clearly and distinctly.

2.—END OF TRANSACTION.—The deposit is retained by us until we hear from both parties that the transaction has been completed. If a sale has been effected, we hand the amount deposited to the seller. If a sale has not been effected, we return the amount to the depositor. The transaction must be conducted by the parties themselves. We merely hold the deposit.

3.—AMOUNT OF COMMISSION.—The fee is 6d. for each £1, or fraction of £1, and it must be sent at same time as the deposit.

4.—IMPORTANT POINTS.—The depositor must decide within forty-eight hours of the receipt of the goods whether he will keep or return the same, unless, that is, some other period of approval (of which we must be advised) is agreed upon by both parties. The depositor must at the same time notify us of the fact that he has returned the goods. If the goods are not returned within the said forty-eight hours, we reserve the right to send the deposit to the seller after the expiration of that period. And should the seller fail within three days to notify us of the receipt of his goods back again, the transaction will be treated as ended, and the deposit will be returned to the depositor.

5.—A SATISFACTORY PURCHASE.—When a transaction has been completed to the satisfaction of both depositor and seller, both parties must at once return the deposit receipts as a guarantee of its completion. The depositor must at the same time instruct us to pay over the deposit to the seller.

6.—GOODS ALREADY SOLD.—If the goods are sold before our deposit note reaches the seller, or if for any other reason he declines to do business, he must at once return the deposit note to us. Failing its receipt, we reserve the right to return the deposit to the sender after the expiration of three days.

7.—FRESH TRANSACTION.—In case no sale be effected, a deposit is available for purposes of a fresh transaction, provided another deposit fee be paid.

8.—GOODS IN TRANSIT.—Goods in transit are at the seller's risk, and any damage or loss sustained on the journey must be borne by the seller. But goods not approved of must be properly packed and returned by the same means as were used in sending the same.

9.—PAYMENT OF CARRIAGE.—The payment of carriage must be a matter for arrangement between the vendor and depositor We do not undertake to settle disputes affecting questions of carriage. But in the absence of other arrangements the purchaser is liable for the carriage of the goods, and if the goods are sent on approval and returned, each party pays the carriage one way.

10.—DISPUTES.—In case of a dispute, the decision of the Editor is final.

IMPORTANT.

SEND THE FULL COMMISSION.—If the full commission does not accompany the deposit, the vendor will not be notified of its receipt until the amount deficient plus the extra postage incurred has been paid to us.

HOW TO REMIT.—Under no circumstances will Cheques or Post-dated Money Orders be accepted as deposits. Uncrossed Postal Orders must be sent and the numbers taken for safety.

NOTICE TO BIRD PURCHASERS.

It is advisable that all newly-purchased birds, especially foreign birds, be kept isolated from established stock for a week or ten days, until by their condition they establish the fact that they are thoroughly healthy.

HENS, 7/6, 8/6, 10/-, 15/-, 20/- each, upwards.
MATCHED PAIRS, ready for immediate breeding, 25/-, 30/-, 40/- 50/-, 60/- per pair, upwards.

Travelling Cages, 4d. extra, also carriage charges, 6d. extra.

Terms: Cash, or deposit with Editor. Every bird sent on 7 days' approval, at my sole risk. Satisfaction absolutely guaranteed.

Send for my 1917 Price List.

JOE THOMAS,
AMBLER THORN, HALIFAX, YORKS.

"Multum-in-Parvo"

IN ALL TRUTH.

12, Sandon Street, Waterloo, Liverpool, April 11, 1917.—Birds arrived safe; delighted with them. They are real gems. Thanks for the prompt and straightforward way you have dealt with this, my first, but not my last, transaction with you.—J. W. Plavin, to W. Rudd.

BEFORE DECIDING ELSEWHERE

send for my current ppice list. It will be sent you post free, and, remember, it includes almost all varieties. As present prices go, you will in most cases find the birds listed are not only lower in figures, but better in quality than can usually be obtained now; or full particulars of any bird sent upon receipt of stamped envelope.

RUDD, Specialist, Norwich.

Club Reports.

ABERTILLERY C.B.S.

Meeting, April 14, Prince of Wales Hotel. Mr. Wm. Cooper presided over a good attendance. The chairman congratulated Mr. J. Parfitt on his recovery of health. Unanimously decided for Mr. J. H. Roe to judge our open show, Oct. 24. Also to hold F.F. show July 7, time and place to be arranged. Mr. J. Parfitt, judge. Mr. H. H. Mortimer is giving a stuffed bird in case, value £1, for best young bird in show; other specials to follow. A hearty welcome and invitation given to new members.—J. Webber, Hon. Sec.

CLAYDON C.B.A.

Half-yearly meeting, April 3, Nelson Temp. Hotel, Mr. A. Maxwell, President, in the chair. Secretary read letter from treasurer of Blinded Soldiers' and Sailors' Fund, acknowledging receipt of £23 11s. 3d. surplus handed over from last show. Election of office-bearers for ensuing year Pres., Mr. A. Maxwell; vice-pres., Messrs. Sloan and Craig; sec., Mr. J. P. Park; asst. sec., W. Hutchison; auditors, Messrs. Houston and Crawford; committee, R. T. Anderson, C. Beeren, F. Taylor, E. Taylor, Jno. Fulton, R. Jeffrey, D. F. Webster, G. Martin, J. Swann, R. Watson, A. K. Hunter, W. McClymont, J. Kerr, A. Muir, J. Pinnock. Decided that Committee meet last Sat. in July, to consider date, etc., of next show, same if held, to be for benefit of Red Cross. A vote of thanks to late Sec. was recorded.—W. Hutchison, Sec.

"Food."

THE GREAT NEW NATIONAL WEEKLY.

A practical journal which shows how to grow our own food.

The profitable rearing of Poultry and animals which help to fill our food bill is dealt with each week, and invaluable advice is given to those who have started to produce home-grown fruit and vegetables.

No one with a garden, large or small, should be without this wonderful pennyworth, and the small holder will find in it a veritable treasury of practical knowledge.

Every Thursday 1d.

Advertisement forms and specimen copy sent post free on application to "Food" Offices.

154, Fleet St., London, E.C., 4.

NORTH-WEST GLASGOW C.B.S.

Meeting, April 13, Unionist Rooms, 308, New City Road, Mr. W. Loan, vice-president, presiding over a fair turn out. The principal business was the nomination of judges for F.F. and annual show. New member admitted, Mr. A. Main. It has again been agreed that any member of last year taken by the Military be allowed to show birds free at annual show in November, also without paying the usual annual sub. Two new members were proposed, and a vote of thanks to the chairman terminated the meeting.—P. Houston, Sec.

SHEFFIELD C.B.S.

Meeting, Mr. Hemming chair. Questions on birdy matters proved interesting. The chief question was how to feed birds economically during war time. Fanciers should now benefit by the recipes which have appeared in CAGE BIRDS. Judges for N.F. show, Messrs. Bingham, J. Woolhouse, and Mace. Next meeting, paper on size, and how to produce it, by Mr. Waters. Let this be a record meeting.—E. Sisson Assist. Sec.

[The date and place of the meeting reported, and of the next meeting mentioned were not given in the report.—Editor].

BEAMISH C.B.S.

Meeting, Bird Inn, April 14; Mr. S. Elliot, chair, and only a poor turn-up, but we got through a lot of business. Decided to hold a Nest Feather show, June 30, and annual show Nov. 24. Judges were nominated. We have raised subs. to 5/- all round, 1/- to go to Nest Feather show, to make prizes a little bigger. Eight new members elected: T. Bewick, R. Peart, R. Hutchinson, W. Rendel, C. Mitchel, T. Elliott, E. Classon, and J. Anderson. We wish all members a good breeding season. A little chat on birdy matters brought a pleasant evening to a close.—J. H. Elliot, Sec., Middle Hold, West Pelton, Beamish.

GLASGOW W. OF SCOTLAND.

Meeting, April 7, Temp. Hotel, Ingram St., Mr. G. Smart presiding over a good attendance. Sec. stated following judges had accepted for annual show: Messrs. J. McLay, W. Simpson, J. Smellie, and M. Craig. Mr. E. Barron gave a paper on the Norwich Canary, clearly defining the various properties that went to make an ideal Norwich show specimen. His lecture was much appreciated, and at the close he was accorded a hearty vote of thanks. Messrs. Berry and Page were accepted to membership. A vote of thanks to the chairman terminated the meeting.—W. Hutchinson.

SOUTH WALES & MONMOUTH FEDERATION OF F. AND F.S.

Annual meeting, Bush Hotel, Swansea, April 9; Chairman, Mr. I. E. Jeffreys, Swansea. The Secretary, Mr. McLucas, was not present, and had not forwarded the books of the society. It was resolved that a deputation of two members wait on him. P. H. Morris, Aberavon, was appointed Sec. pro tem. Next meeting, Elysium, High St., Swansea, April 28, at 4, for the election of officers, etc. Members and Society representatives are earnestly requested to be present.—P. Herbert Morris.

LIVE POOL B.B.A.

Meeting, Oldham Hall, April 12, Mr. Bunner, chair. Classification for nest feather shows to be held on the fourth Saturday in June and July, at the Café, Brownlow Hill. 4 classes Yorks. clears, 4 Yorks. Greens, 4 Nor. clears, 2 Greens, 3 Bord., 2 Bord. Greens or Clears, 1 A.O.V., 11 Brit., and 1 A.O.V. Judges appointed for First Nest Feather show, Messrs. Abbott and Mallinson; Second N.F. show, Messrs. T. Evans and W. Jones. Specials: Cup for each of the eight sections for most points throughout the season, also prizes for 2nd and 3rd most points. There was a fair attendance, and the meeting proved very interesting. Three specials were presented to the members who took part in the egg food making competition, held at last meeting.—T. R. Jones.

AUDLEY ROLLER C.C.

A VOTE AGAINST RULE 6 OF THE FEDERATION.

Meeting, April 7, Mr. J. Tomlinson (Newcastle) presiding. The chief business was the consideration of Federation Rule 6, and after considerable discussion the following resolution was unanimously passed: "That the Audley Club apply to the B.R.C.C. for rings. The members to ring their birds with both B.R.C.C. and Federation rings; and in the event of Federation Rule 6 not being deleted, the Audley Roller C.C. to withdraw from the Federation." There was a fair number present.—A. Dean, Hon. Sec.

EA T HAM C.B.S.

Meeting, Town Hall, April 12, Mr. H. J. Kybert, chair. A paper entitled "Observations by a novice," was read by hon. sec., Mr. F. Onslow, and was much appreciated, several questions being asked, and an interesting discussion followed. It was agreed that same should be sent to CAGE BIRDS for publication. Owing to the late hour, the egg food competition arranged to take place had to be cancelled, but Mr. J. Ferridge gave an exhibition of egg food making, and explained why he used certain ingredients. His methods were very keenly observed. Agreed that notices of all committee and monthly meetings appear in CAGE BIRDS. Members please watch for dates. A very pleasant evening was brought to a close with hearty votes of thanks to Messrs. Onslow and Ferridge.—H. J. Kybert, Chairman.

ALFRETON C.B.S.

Meeting and table show of British birds. Red Lion Hotel, April 14, Mr. J. Adnitt chair, in the presence of a good meeting. There was a strong discussion on the nest feater shows on account of the late start in breeding. Decided to have a table show of young Canaries on June 9th, with the annual open Nest Feather Show to follow in July. Mr. B. Simpson, of Ryebridge, was elected to judge table show; classes to be drawn up at next meeting, May 12. The misfortune of a brother fancier, W. Andrews, who has had a fire in the room where he kept his stock, all his birds being suffocated, was mentioned, and an appeal on his behalf was made to assist him in getting a few birds together. The members gave as follows: Mr. J. Adnitt, buff hen; Mr. E. Henshaw, buff hen; Mr. A. Webster, buff hen; Mr. J. Cockayne, two hens; Sawer Bros. paid his subscription for the year. Also a collection was made, which was left in the hands of the secretary, to procure a yellow Yorks cock for him. Any fancier who would like to help our brother fancier should write Sec., 3, Wilson Street, Alfreton. New member made, Mr. T. Prothero. Result of table show, 18 birds, Mr. T. Barlow judge. Winners of Specials, J. Adnitt, A. Evans, Sawer Bros. Goldf. or Bullf. (4): 1, Adnitt; 2, Evans; 3, Webster; vhc, Mossendew. Linnet, Etc. (5): 1, 2, Sawer Bros.; 3, Adnitt; vhc, Evans; hc, Mossendew; A.O. Brit. (6): 1, Sawer Bros.; 2, Prothero; 3, Attenborough; vhc, Spencer; hc, c, Mossendew. British Hen (3): 1, 3, Evans; 2, Spencer.—G. Sawer.

CLUB AND SOCIETY NOTICES.

ONE NOTICE of any forthcoming Society meeting inserted free. It must reach us not later than Tuesday morning's post. Specially printed Club Notice Postcards may be had free on application to our Manager. Secretaries should always use them.

NOTE.—Only the details asked for on our cards can be published. Such phrases as "a large attendance desired," etc., must not be included. Classification for forthcoming shows, appeals for new members, and any other matter in the nature of an advertisement will only be inserted if paid for at advertisement rates.

Ashington and Hirst C.B.S.—April 21, Miners' Hall, Ashington, 6.30. Election of officers, balance-sheet.—C. F. Tapson.

City and Suburban A.C.B.—April 23, Institute, Paddington Street, Baker Street, W., 8. Lecture by Mr. Frank Cole.—F. J. Martin.

Chester-le-Street C.B.S.—April 21, King's Head Hotel, 6.30. N.F. show schedule; judges for same and annual show. Election of chairman and auditors; and other business re cod liver oil food.—E. Ward.

Gourock C.B.A.—Sat. (date not stated—Ed.), Gamble Institute, 7.30. General business; election of judges and show business.—D. Rollo.

Glasgow Queen's Park C.B.S.—April 25, Y.M.C.A. Rooms, 8. Hat night.—A. Foreman.

Glasgow and W. of Scotland.—April 24, 100, W. Regent Street, 8. Show of British (3 classes), and Foreign Goldf. or Bullf.—M. Craig.

Ilkeston C.B.S.—April 21, Derby Arms, 7. Business important.—T. Smith.

London and Counties A.C.B.—April 21, Victoria Hotel, Charterhouse Street, E.C., 7.30. Lecture by Mr. J. Robson, "General Management." Fanciers and friends will receive a hearty welcome.—W. Gilbert.

Larkhall C.B.A.—April 28, Y.M.C.A. Hall, 7.—A. Kerr.

Mountain Ash F. and F.S.—April 23, Napier's Hotel, 6.30. Advisability of holding young stock show. Fanciers cordially invited. Also lecture by Mr. G. R. Rowlands.—T. Holman.

National British Bird and Mule Club.—Sunday, April 22. Ramble to Beaconsfield and neighbourhood; train leaves Marylebone 10.25. April 28, Theydon Bois to Loughton; train leaves Liverpool Street 2.5. Friends and fanciers invited.—T. R. Trower.

Newcastle E.E. C.B.S.—April 25, Blue Bell Inn, Shield Road, 7.30. Important, to consider whether to hold a show this year or not. Would like to see a good turn-up of members.—Ed. Coltman.

Openshaw, Gorton C.B.S.—April 25 Room back of stage, Alhambra Theatre, Higher Openshaw, 8.30. General business; special prize fund open; judge F.F., Mr. A. G. Davis.—A. W. Newton.

Swinton and Pendlebury Roller C.C.—April 25, Bridgewater Arms, Pendlebury, 7.30. Club business.—E. Hibbert.

Sheffield O.S.—April 24, headquarters, 8.15. General business.—E. C. Job.

South Moor Social C.B.S.—April 22. Club Room, 6.30. Important business.—G. Lane.

Stockport and Hazel Grove B.F.A.—April 24, Trinity House, Shaw Heath, 8. N.F. show judges; colour-feeding.—W. Stafford.

Swansea C.B.A.—April 21, Elysium, High Street, 8. Table show, 8 classes. Fixing date of young bird show.—J. H. Ford.

Sunderland C.B.A.—April 21, Station Street Cafe, 7.30. Washing exhibition by Mr. J. Riseborough, postponed from last meeting; and any other business.—F. Riseborough.

Stanley F.F. and C.B.S.—April 21, Victoria Club Hall, 7. Electing judges for young stock show; also rules.—J. Armitage. (Notices must be sent in duplicate if it is desired that they be inserted in "Poultry World" as well as "C.B."—Ed.)

West Bromwich and Handsworth.—April 21, Ivy House, Handsworth 7.30.—P. T. Cowley.

West Stanley Victoria F.F. and C.B.S.—April 22, Club Room, 7. Election of judges.—R. Hutchinson.

Warrington C.B.S.—April 26, Blue Bell Sale Rooms, 8. General business.—H. Warburton.

SCOTTISH CRESTED C.C.

Annual general meeting, held in Glasgow, April 7, Mr. John Noble, Kilmarnock, chair. Financial statement for year 1916 was submitted, which showed a credit balance of £8 12s. 10d. This was considered satisfactory, and was adopted as read. Decided that in future the judge-elect for club show be a non-member of the club. Also that club medals be offered for competition to clubs having on their current year's roll six or more members of Scottish Crested Canary Club. Decided that in view of the poor attendance all members be post-carded for next meeting of club. Members elected: Messrs. J. Tweedie, J. A. Grant, Wm. Harris, W. R. Boyd, Wm. Page and H. M. Govan. Proposed for membership, Mrs. Montague Scott. A vote of thanks to chairman brought meeting to a close.—J. Young, Hon. Sec.

STOCKTON-ON-TEES C.B.S.

Meeting, Little Regent Hotel, April 5; Mr. J. Yeates presided. Decided to call a special meeting at an early date, and also that the sec. get in touch with some of the leading exhibitors, and arrange for lectures. New members are still coming forward in spite of the unsettled conditions of the country, and there never was such an opportunity for making the society a financial success. New members elected: Messrs. C. Watson, Wannock, E. Sugden, T. Gibson, T. Lazenby, W. Perry, and T. Wright, an average of six a month since society has been newly organised, which speaks volumes for the enthusiasm still in the Fancy. Fanciers desirous of joining us will be welcome, and any information desired will be willingly forthcoming on communicating with me at 8, St. Paul's Street, Newtown, Stockton-on-Tees.—F. Stothard, Sec.

EAST ANGLIAN NORWICH P.C.

Meeting, April 12. The chairman and vice-chairman both being unable to attend owing to illness, Mr. J. Mitchell presided, and there was a fair attendance. The business consisted of recommendations from the committee. These were freely discussed, and in the main confirmed. The action of the committee in investing part of the funds in hand in the 5 per cent. War Loan was approved. Two members guaranteed to purchase the stock immediately same is required, the club to take in the meantime interest earned and also any increase in value of the capital. The annual general meeting was fixed for April 26 or May 10, at the option of the Sec. A report of the working of the club and its present position had been drafted by the Committee. This met with approval, and will be sent in due course to each member, together with a copy of the balance sheet.—R. Tomlinson, Hon. Sec.

MIDDLESBORO AND TEES-SIDE.

Meeting, April 7, Crown Hotel; Mr. Swinscoe presided over a good attendance, many new faces putting in an appearance, which we are always glad to see. Questions appertaining to the Fancy in general were the main topic of the evening, and some very knotty and interesting ones were put and ably answered by some of the more experienced fanciers. Mr. Bibby gave the company his recipe for egg cake, and also a few useful hints on how to mix, make and use it, which should be of great value to any fanciers desirous of using same, as he has had a great share of success in the breeding-room. New members still coming forward, and fanciers desirous of joining us will find our meetings and shows of great interest, and members ever ready to instruct or advise in any matter possible. We extend an invitation to any fancier who is able to visit us, and an exchange of views is at all times welcome. Meetings held first Saturday in each month, at 7.—F. Stothard.

SHEFFIELD O.S.

Meeting, headquarters, April 8, Mr. T. Dawn presiding. Balance sheet for 1916 was submitted in a very lucid manner by the chairman, who remarked that the past year was the most successful in the history of the society. It was decided to send £10 9s. 5d. to the Star and Garter Fund from the open show account. All our ventures during the season had been profitable, and he was pleased to say that a substantial balance was added to our banking account. It was a very encouraging situation in such times, and was a very attractive society for new members. He was delighted to see Mr. T. Wright, who had done his bit in France, and hoped all our other absent members would come back safely. He wished to thank the Press, especially CAGE BIRDS, which helped greatly in keeping the attention of fanciers generally drawn to our valuable annual show. Mr. Chittenden (Bradford) judged a table show of British birds and gave a few remarks on the exhibits. Mr. P. Walsh was the most successful competitor, while Mr. J. Beech was close up. A vote of thanks to the judge concluded the business.—E. C. Job.

PLUMSTEAD AND WOOLWICH.

Meeting, Trinity Schools, April 10, with a small attendance to hear Mr. Cole give his instructive lecture on egg food. Those absent missed a treat. Samples of food were displayed and questions answered to our satisfaction. All agreed that we had learned something new. A vote of thanks to Mr. Cole brought the evening to a close. Another good lecture will be provided for May. Friends and fanciers welcome.—G. H. Maclellan, Hon. Sec.

FARNWORTH C.B.S.

Meeting, April 11, Church House Schoolroom. There are two Farnworths in Lancashire, and the above is Farnworth nr. Bolton, "the Hub of the Universe." Sixty-five per cent. of the members were present. This Society can say "well done," for they are keeping the home fires burning, making two new members each meeting night this year. A very fine agenda was gone through, and fifteen classes were arranged for the young bird show.

When the chairman asked for other business, the members aired their grievances with some high discussion, but all agreed to waive differences. Mr. Mitchell, Treasurer, gave a most interesting paper on Yorkshires, touching upon their history, and showing how the stately birds now on the bench were obtained through pure love, and not for money. A vote of thanks was accorded, the chairman expressing that the meeting had been the gain of those present, and a loss to those absent.—W. Dawson.

Members' Shows.

NOTE.—Secretaries will greatly facilitate the work of ourselves and our printers if they will kindly endeavour to send their reports as nearly as possible as they see these accounts printed, and if they will also write the names of exhibitors as distinctly as possible.

SPRINGBURN, POSSIL PARK.

Meeting and show of British, Reid Hall. Mr. A. Swan, Pres., in the chair. New member admitted J. Morton. We are sorry to say one of our members, Mr. J. Crawford, has lost his only son, and the members extend their deepest sympathy in his sad bereavement. There was a good turn-out of British. Goldf.: 1, sp, Swan; 2, Robertson; 3, sp Montgomery; 4, 5, Hamilton. Bullf.: 1, sp, Hamilton. Siskin: 1, sp, 2, Hamilton. Greenf.: 1, sp 3, Hadley; 2, sp, 5, Swan; 4, sp, Hamilton. Fcr Goldf.: 1, sp best bird, Fyfe. Mr. M. Craig judged and was awarded a hearty vote of thanks. A vote of thanks to chairman brought the meeting to a close.—A. Hamilton, Sec.

VALE OF LEVEN C.B.C.

Show, Village School, Alexandria, April 14. Mr. J. H. Adam judged, and his awards were well received; the show was a great success. Mr. Adam lectured on Canary breeding, moulting, and colour feeding, and was accorded a vote of thanks.

Goldf. Mule: 1, spl, Trotter. Linnet Mule: 1 Trotter. Greenf. Mule: 1, McKirdy. A.O. Hyb.: 1 Trotter; 2, McKirdy. Brit. Goldf.: 1, spl, 3, Trotter 2, McNeill; 4, McKirdy; 6, McIntyre; 7, Gregg; 8, Begg. Bullf.: 1, Trotter; 2, Ibbertson; 3, Gibson; 4, Begg; 5, McKirdy; 6, Storrie; 7, McDonald. Linnet: 1, spl, Trotter; 2, Storrie; 3, McIntyre; 4, Gibson; 5, 6, Edwards; 7, McNeill; 8, Gilles; 9, Begg. Greenf.: 1, Trotter; 2, Gibson; 3, McKirdy; 4, Melvin. Lesser Redpoll: 1, 9, Trotter; 2, Cochran; 3, McIntyre; 4, McKirdy; 5, Storrie; 6, McNiven; 7, Melvin. Mealy: 1, Trotter. Twite: 1, Trotter; 2, Gibson. Siskin: 1, spl, Trotter. 2, McKirdy. Bramble or Chaffinch: 1, spl, 2, Trotter; 3, 6 McKirdy; 4, McKinlay; 5, McDonald. Bullf. Hen: 1, McNeil; 2, Kirkham; 3, 4, Trotter; 5, McIntyre; 6, 7, McKirdy. A.O. Hen: 1, 2, Trotter; 3, McKirdy. For Goldfinch: 1, Storrie. A.O.V.: 1, spl, 2, 3, 4, McKirdy.—G. McColl, Sec.

"CAGE BIRDS" will be sent post free weekly, on the day of publication, at the prepaid rate of 10s. per annum for the United Kingdom, and 13s. annually for foreign countries.

Twitterings.

Owing to the bad weather of Wednesday last, April 11, Mr. Whitford was unable to attend the meeting of the Nantymoel, Ogmore Vale and District C.B.S., to deliver his lecture, writes Mr. T. Davies, sec., so I am sorry I cannot send the same for publication in this week's issue, but I will do so after next meeting.

The Wheatear in Notts.

I saw a Wheatear on April 9, at 7.30 a.m., near Trowell village, Notts, writes Mr. J. H. Murray, Ilkeston. It was snowing at the time, and there was a good two inches on the ground. The bird seemed out of place on such a morning, but it looked very well and plump, the white feathers above the tail looking like the snow.

An Ideal Arrangement.

At a meeting of the East Anglian Norwich Plainhead Club, the action of the Committee in investing part of the club's funds in the War Loan was approved, and two members guaranteed to take up the stock if the cash were at any time required by the club for immediate purposes. Thus the club gets the interest, the country gets the benefit of the money, and the club can always have it back for the asking. Truly an all-round benefit.

An Early Bird Ramble.

A select party of the field section of the National British Bird and Mule Club journeyed by train to Cobham on Thursday, April 12, and walked to Effingham by way of Church Cobham, and through Hatchford Park, the seat of Sir Henry Samuelson, Bart. Although fine sunshine prevailed throughout most of the ramble, bird life was strangely silent, and not a trace of a migrant was seen in a district which generally teems with the Birds of our fields and hedges. Are the migrants merely delayed by the inclemency of the weather or has the war changed their course? The walk finished at Effingham in a heavy snowstorm. Mr. Trower kindly reports that during the ramble he noted the Starling, Carrion Crow, Moorhen, Robin, Wren, Blackbird, Partridge, Rook, Chaffinch, Pheasant, Skylark, Greenfinch, Goldfinch, Hedge Sparrow, Swan, Dabchick, Wild Duck, Blue Tit, Snipe, Kingfisher, Jackdaw, Plover, Linnet, Song Thrush and the House Sparrow of course, 25 species in all, about half of what would have been seen in normal times.

M'Yes.

Only one fresh development in the vegetable trade can be recorded, says the writer of "Supplies and Prices" in the "Daily Telegraph." Owing to shortage of staff enterprising greengrocers have bought Parrots and are training them to call out "No potatoes today."

Rambles of London Bird Lovers.

The field section of the National British Bird and Mule Club will ramble to Beaconsfield and the surrounding district on Sunday, April 22, leaving Marylebone Station at 10.25, and on Thursday, April 26, from Theydon Bois to Loughton, leaving Liverpool Street by train at 2.5. Friends are invited to join either or both parties. Those going on Sunday should provide themselves with a light luncheon.

The Willow Wren Arrives to Date.

The Wryneck is reported as having been heard in Epping Forest on April 7, and a Willow Wren is said to have been seen and heard on Clapham Common on April 10. The Willow-Wren at least seems to be arriving according to schedule, notwithstanding the arctic weather.

IMPORTANT NOTICE TO READERS.

AS already foreshadowed in our columns, the time is now at hand when the return of unsold copies of any paper will be prohibited absolutely. It now becomes imperatively necessary, therefore, for readers to place a definite order with their newsagent, or CAGE BIRDS will be unobtainable. No one should hesitate in doing this, for no obligation will be incurred, the order always being subject to cancellation in case of removal or for any other reason. An order form is attached, and this should be signed and cut out without delay.

ORDER FORM. To be filled up and handed to the nearest Newsagent or Railway Bookstall.

Please { *deliver* / **keep for me* } *every week until further orders a copy of "CAGE BIRDS."*

* Cut out one of these.

Seasonable Hints on Useful Weeds.

By RICHARD MORSE, F.R.H.S.

A weekly feature which will be found of the highest value to all who keep seed-eating birds, and of interest also to all who appreciate the beauty and usefulness of the flowers of our waysides and meadows. The first of the series appeared in our issue dated March 17.

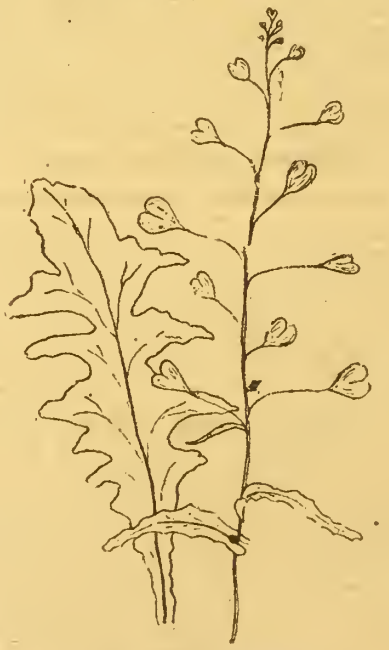
SHEPHERD'S purse (Capsella Bursa-pastoris Med.), like most of our other wild plants, is unusually late this year, but is at last beginning to become conspicuous in fields and allotments, particularly where labour is scarce. Those who are familiar with the plant in its ripened stage, as shown in the accompanying drawing, will hardly recognise it yet, except in sheltered spots, where already a small supply of the well-known pods may be gathered, but the exceptionally cold weather during the past few months has played havoc even with the wild plants in exposed situations, and in some such parts the shepherd's purse is even yet only a dense rosette of much-divided leaves, similar in shape to the one shown in the sketch.

It is no uncommon sight in mild winters to find this weed flowering and fruiting in December, January, or February, and those who cultivate it know that its seed may be planted in almost any month of the year with every hope of success, though a severe spell of frost may at any time check its growth very considerably. It is worth bearing in mind that both shepherd's purse and chickweed are annual weeds; that is, they live for only one season, and die quite away after producing flowers and fruit.

Shepherd's purse is hardly likely to be mistaken for any other plant except during its early stages, for the characteristic, heart-shaped pods are known to everyone, and if there is any doubt about the identification of specimens, it is a good plan when possible to await the production of the fruits, which should at once settle the question.

It would be difficult to find a more generally useful food than shepherd's purse, either for British or foreign birds, or for old or young, and it is almost impossible to conceive of any harm resulting from its use. Plants of the cabbage family, of which this weed is one, seem to have a special charm for the Linnets, and they never appear so thoroughly healthy and robust as when taking abundant supplies of this food. The whole of the plant should be gathered, and perhaps the most useful stage is that when one finds fully ripe yellow pods at the base, reddish-brown half-ripe pods just above them, green pods higher still, and flowers and buds at the summit. The plants will probably not reach this stage for some few weeks yet, as lack of sunshine, of course, holds back their development.

The yellow pods easily fall to pieces at the slightest touch, and the plants should therefore be dropped carefully into a bag as soon as gathered, in order to save loss of seeds. If, later on, you shake your plants thoroughly, you will have a plentiful supply of ripe seeds for storing, if desired, and also a useful quantity of green and half-ripe specimens for present use. Not only Linnets, but many other British finches, and also Canaries, will thrive upon this food, and their nestlings seem to appreciate almost nothing so much as this humble weed.



SHEPHERD'S PURSE.
Showing the Triangular Seed Pods.

When gathering shepherd's purse, one should always be on the look-out for specimens infested with tiny green flies and maggots, as these add immensely to the value of the food. If the husks and seeds from the bottom of one's gathering-bag be examined closely, they will often appear to be almost alive themselves, so continuous is the movement amongst the insects mixed with them. This is undoubtedly one of the features which have made shepherd's purse such a universally popular food, and that is a point which should never be overlooked by wild-seed gatherers. The plant is also attacked by a fungus disease, which causes it to become whitish in appearance, and greatly swollen. Such plants should, of course, always be avoided.

Readers are invited to send any botanical specimens which they have difficulty in identifying. The whole plant, including fruits, should be sent whenever possible. Packages should be addressed [illegible] BIRDS, 154, Fleet Str. must be accompanied Answers will appe[illegible]

The following gentlemen have agreed to judge our annual club show, Oct. 14, writes Mr. Walter S. Smart, hon. sec. Loanhead C.B.S.:—Scotch Fancies, Norwich and British, Mr. D. Noble, Bonnyrigg; Borders, Mr. Spence, Methil, Fife.

Mr. Maddison on Mule Breeding.

Mr. Maddison, who has bred more Light Mules than any man living at the present time, writes Mr. T. C. Crawhall, Chairman Newcastle C.B.S., is going to give an account of his methods at our meeting on May 3, and we extend a hearty invitation to everyone who can attend at Shield's Cafe, Bigg Market, at 7.30, to hear the lecture.

Secretaries Called Up.

Owing to our Secretary having been called to the colours, writes Mr. F. Stothard, 8, St. Paul's Street, Newtown, Stockton-on-Tees, I have taken over pro tem. the secretarial duties of the Stockton-on-Tees C.B.S. All communications should be addressed to me accordingly.

As Mr. Thomson has been called to the colours, I have now been appointed secretary of the Larkhall C.B.S., writes Mr. A. Kerr, 17, St. John Street, Larkhall. I am very sorry to inform you we were deprived of Mr. Dan Hamilton's lecture on Border Canary Breeding at our last meeting, through an accident which befel Mr. Hamilton while following his employment. He is getting on finely now, so we intend to get him later in the season.

"CAGE BIRDS" ROLL OF HONOUR.

Mr. Clark, Stockton-on-Tees.

It is with deep regret, writes Mr. F. Stothard, hon. sec. Stockton-on-Tees, C.B.S., that we have to announce the death of Mr. Clark, one of our members, who was seriously wounded in action, and has passed away after a very painful illness. I am sure that all fanciers will join me in extending their deepest sympathy to his parents in their great trouble.

Lieut. A. C. Finlayson.

It is with deep regret, writes Mr. G. McColl, secretary Vale of Leven C.B.C., I have to announce the death of one of our members, Lieutenant Alexander C. Finlayson, Royal Flying Corps, who died of wounds received in France on April 9. Deceased was very interested in Softhills, and possessed a number of good birds. The club's sympathy goes out to Mr. and Mrs. Finlayson and family in their sad bereavement.

Deceased, who was twenty years of age, was a native of Alexandria, and joined the colours in August, 1914. He met with an accident while in training, and was discharged, but rejoined, and latterly received his commission in the Royal Flying Corps. He had only been a fortnight in France when he met his death. Prior to enlisting he was employed in the Alexandria Works, Alexandria, as an analytical chemist. Deceased was one of three brothers who gave their services to the colours.

ARE YOU TAKING "FOOD"?

There must be very few of the readers of CAGE BIRDS who have not yet seen the new weekly paper, "FOOD," and those who have once bought a copy will, of course, be taking it regularly, so may skip this paragraph, for it only calls attention to a few of the good things which appear in this week's issue. On the front page will be found an article by an eminent physician, Mr. E. J. Spriggs, F.R.C.P., telling how to make the most of the present position and economise in the use of eatables. Mr. C. A. House, whose name will be familiar to everyone of our readers, gives some invaluable tips, showing how we may learn from friendly continental countries how to cheapen the production of food, and how to dispose of such surplus as we may raise in our own gardens. There are hints on goat-keeping, butter making, gardening (by the lady expert, Miss Helen Colt), big-bud in black currants, the cultivation of allotments, poultry keeping, cookery, and a number of useful illustrations which tell a story in themselves. In addition, there is a chart which will be found of the utmost value to those who keep cattle and pigs. This reminds us that these charts are to be one of the features of FOOD from time to time, and may be purchased, printed on stiff card for permanent reference, the price being 3d. each post free. The first, giving every possible information as to when and how to sow and plant every kind of vegetable, is absolutely indispensable to the beginner, and a useful aid to memory for the most experi[illegible] FOOD of

THE NORWICH CANARY.

HOW TO BREED WINNING SPECIMENS.

A lecture given by Mr. F. J. Martin, Battersea, before the members of the City and Suburban Association of Canary Breeders.

So much has been said and written upon this subject that it seems almost impossible to say anything without treading the beaten path. I propose, however, to take you along a new path, a fresher road to the goal of success. I shall confine myself to facts based upon personal experience and observations after many years of practical and experimental breeding. It will be for you to sift the wheat from the chaff by means of your intelligence, and I hope that as a result of that application you may have a successful season.

Most of you remember doubtless your first journey to make a purchase, and saw quite clearly in your mind's eye your ultimate success. Yet how many of you can say that your thoughts matured? In my judgment your failure can rightly be attributed to the fact that you were not familiar with the main characters of the bird, or you allowed your price to determine the class of bird you bought.

Now what is a Norwich Canary?

Most of you, I venture to predict, would describe the bird in the manner of the Specialist Club Book of points. This to the novice is most confusing, and is indeed difficult to follow when purchasing or even selecting for pairing.

I submit to you that a Norwich is a Canary possessing shape and width in the shortest possible length. And friends, the winner in a class of Norwich is that bird which possesses the most Norwich properties in the shortest manner. From this description the man in the street can determine that a long bird is foreign to what a Norwich should be. Yet how few there are who persist in getting the right stamp of bird to start with.

The Importance of a Good Start.

A bad start in any line spells defeat, but on the other hand a good start generally means success, particularly when backed with intelligence and persistency. I am aware that a bad start can be corrected by careful selection, subsequent good purchases, and a severe weeding out of birds that fall below the standard of usefulness. But very few fanciers ever succeed in doing this.

We are sometimes told to place ourselves in the hands of a reliable breeder to secure success. Fanciers, it's a joke; and to many has proved an expensive one. Breeders resemble shopkeepers, since each has goods for disposal, all of which are good, and nobody has better.

He is a wise man who makes himself conversant with the variety of bird he proposes to breed, backs up his own judgment, demands his article, and sees that he gets it. Friends, trust to no one, but trust your own intelligence. The result will be better and sweeter.

I am aware a Norwich should carry colour, quality, and sheen. These essentials of a perfect bird can be grafted on to the main character already mentioned fairly easily, and I will tell you how. But let me say these additions are of quite secondary importance with a first start.

The three qualities mentioned invariably go together, and can be obtained by the selection from a breeder's room of a bird or birds possessing these features, or you can breed the bird by an out-cross.

How to Get Good Colour.

Many fanciers in need of colour choose a marked bird. A marked bird is no guarantee of getting colour. Indeed the greater number of marked birds are useless as colour producers. This is apparent to any one who cares to examine the marked classes. They are invariably a milky colourless lot, and quite useless as colour producers.

Green blood, we are told, is the fountain of colour; it is nothing of the kind. The best coloured birds do not carry green feather, nor brown coloured feather, but are practically black in the markings. And the blacker the marks the better are the colour, the quality, and the sheen.

Now how are these birds produced? I have produced them by pairing a rich coloured yellow cock with a buff Cinnamon hen. I prefer an overyear cock, or older, and an unflighted hen, since I thus get a larger and a better class of hens. In this connection I may say I prefer the hens for the second cross since the marks that I get soon beget clears.

I remember showing one of the yellow hens I reared from this cross under Mr. Jacob Mackley, who publicly stated the hen to be the finest coloured bird he had ever seen, and certainly about the best show stock hen. This hen, when paired subsequently to a clear buff, produced nearly all clear birds, and nearly all carrying that colour and sheen we all admire. Another advantage attached to this cross in preference to using a Cinnamon cock is that you get scarcely any badly marked birds. The cross I have explained to you is certainly better than buying a bird for colour production without knowing its ancestors.

The Influence of the Lizard.

I might add that I have also used the Lizard for colour production with success, but the produce are too small for present-day requirements, although at an all-England show, held at Earl's Court, I won with birds that were second and third crosses from the Lizard.

This cross I found to show colour more particularly when colour fed, and the markings on some of the off-spring were certainly pretty, but I repeat that whilst the youngsters so bred were short and cobby, still they were certainly too narrow fronted to be of any practical use in the breeding room.

Another method of improving a stud of Norwich is double buffing. I am a strong advocate for using this means to secure type and quality of feather and likewise for fixing these properties. In buffs and yellows we have two distinct characters; the former has a tendency towards stoutness and robustness; the latter towards length and slimness, and the customary method of pairing the two colours together is employed to secure a balance. But as we Norwich breeders want as much as possible of stoutness and vitality, and little or none of the length and slimness, it is obviously essential for us to use the buff bird with a good deal of freedom.

In Praise of Double Buffing.

I have paired buffs together for a number of years, and always with but one result, "betterment." And when I say betterment I mean a distinct improvement in type, quality, colour, and certainly a more domed shape, and a better finish behind. The latter two points are of great importance. I never, however, double buff for the mere sake of doing it, nor with undersized birds, nor do I until I have seen their offspring by the usual method of pairing. In terser words, I want ocular proof of suitability. A fancier may have to go a season or two before getting the right material, but it will come, and when it does come use it and hold fast, especially to the young hens. They should prove a gold mine.

I remember selling to a friend a marked buff cock bred from two buffs, and Mr. J. Robson, who judged the bird at an evening show, declared it to be one of the shortest and most massive Norwich he had ever seen. My results by this means are always good, and those who have tried it try again always.

I am aware that when one talks of double buffing he is told the position the Crested fanciers are in. Friends, there is a wide difference in the result of one glass of ale and a pailful when swallowed by one mortal man. We are also assured that by double buffing we shall get fewer yellows, if any at all. This statement is at variance with fact.

If Others, Why Not We?

The Lancashire people double buff extensively, yet can stage good classes of Yellows. The Northern Border breeders double buff, yet can stage plenty of yellows, and with the right feather. Personally, I say you will get more Yellows since nearly all you get from the second cross will be usable, whereas now the major number of Yellows that are bred are useless for practical breeding.

I may add that those little compact yellow hens, shapely to a degree, and full of quality, yet unsaleable sometimes, are valuable when paired to your big double buff bred cocks, and likewise your yellow cocks which often run a little leggy and a little narrow fronted make very good partners for your double buff bred hens.

I think I have said enough to warrant an interesting debate, and would only add that success does not follow upon the adoption of a formula or somebody's method, but rather does success depend upon its mode of application.

INBREEDING.

A Lecture by Mr. T. Johnson, Southport, before members of the Manchester and Northern Counties O.S.

In the following lecture, which we are privileged to reproduce in the interest of our readers, Mr. Johnson, in his own genial style, states that he is not a believer in the practice of inbreeding as applied to Norwich Canaries.

THIS is a subject that wants debating calmly. There is no doubt that evidence and arguments are forthcoming on both sides. When I read that a fancier bearing an honoured name in the Fancy says that a certain winner has been produced by inbreeding, I accept his statement.

I have not taken up the position of saying that you cannot breed winners by inbreeding, and I have not come here to dictate, or to take up the attitude of the Cockney bully who bellows forth in the midst of a heated argument: "I'm not arguing with yer. I'm a telling of yer." I have not come to tell you, but to argue with you, to analyse the evidence before us, and to see if inbreeding is really worth while; but we must argue calmly, and without bluster. When we make more noise than the other fellow, it is a sure sign that we are wrong and he is right.

How the Discussion Originated.

You will remember that this subject was introduced by Mr. Crawhall and Dr. Gordon Stewart, and they had a powerful ally in Mr. House. Fanciers like Mr. House do not advocate inbreeding unless there is something in it, and one has to admit that when one is up against Mr. House, one is up against the barbed wire.

These gentlemen put their case in very lucid and straightforward language, and seemed to make out a sure case for inbreeding. So much so, that a new recruit to the Fancy reading their letters would be likely impulsively to rush away with the idea that all he had to do was to pair two related birds together, and the red ticket was his. He but needed to pair the best son back to his bother, and the best daughter back to her father, and he would be as famous as Sam Cook or Winston Churchill or Horatio Bottomley. Winners would come as quick and as often as rent day.

And that was where I came in, I couldn't stand by and see new recruits muffed by such advice. I had to interfere. That reminds me of an old friend of mine at Southport, who was of an interfering disposition. He was always poking his nose into other people's affairs, and one day he was remonstrated with by another interferer, and advised to mind his own business. "I do mind my own business," he retorted; "but I can't leave other people's alone."

But to resume. My knowledge is limited, of course; but I knew that it was unsound advice to a new starter, because he could not buy birds suitable for that purpose at anything under £10 apiece. But I will refer to that later.

I have said that Mr. House was a powerful ally for the inbreeding section; but much of his knowledge has been gained from Pigeons. "Bee-jay," who was Dr. Stewart, masquerading, was a new recruit, and his letters were pure theory, so far as Canaries were concerned. He also was a Pigeon fancier. Mr. Crawhall, we all know for an enthusiastic Yorkshire fancier, but he admitted that his experience in in-breeding was only a year or so old. Yet his theory was a very powerful one, and looked well on paper, but—and it is a big but—you had to have winners to start with; and that is why I said that you couldn't get suitable birds for the purpose under £10 apiece.

I will give you a brief instance of what I mean. You will all remember the hen produced by your esteemed secretary, the clear buff. That hen was undoubtedly the best buff hen living, and if she had lived through last show season, she would have showed it, because she was one of those that improve with age, like wine and funny stories. It is no news to you that the hen was produced from a cock from one room and a hen from another, and we may safely say that, although the two rooms possess absolutely the best of stuff, they are as distant in relation as the Poles are asunder. That is an instance of breeding from unrelated stock.

What Might Have Happened.

Now I am going to theorise, because inbreeding is all theory. Mr. Crawhall or Mr. House would tell you that if Mr. Green had paired that hen back to her father, red tickets would come as freely in the third year as green gooseberries. My friends, it's a fallacy! He couldn't do it. Why? Because the hen was 100 per cent. better as a show bird than her father, and I'm not speaking disparagingly of the father either.

If Mr. Green had paired that hen back to her father he would have been fixing into the offspring their father's faults, and breeding out the good points of the hen. I hope you get me.

Now I am going to show you how inbreeding—in theory, mind you—could have been successful by using that hen. If Mr. Green had procured the best yellow cock he could buy from the show bench, and paired him to the buff hen, and the following year paired best son to mother and best daughter to father, and at the same time bought another cock to run with two other best young hens, he would have been right for a few years, providing—and it is a provision that has to be contended with—that the birds bred and luck came his way in the matter of rearing. It would mean that in the second year from producing that hen, and counting the original pair, he would be possessed of four pairs of Norwich to form the nucleus of a stud that ought to have resisted almost any competition. Such a stud could have been inbred with advantage.

Some of you may be thinking that £10 is a big price to pay for a stock bird.

It is, in these days when spuds are called potatoes. But you could not buy one suitable for the practice of inbreeding for less. Why? Because they won't part. As I pointed out in my first letter to Cage Birds on the subject, it is a costly proceeding to be successful. It reminds me of what I read of a famous French author. He lost his wife, and everybody in his street was anxious to find him another, but when he lost his horse he could hardly buy one for love or for money.

I have referred before to that well-known Yorkshire Canary, "Dreadnought," as being an example of what can be produced by breeding from birds with pedigree blood, but without inbreeding. I remember seeing this bird at Bradford as an unflighted when he beat the best that the Yorkshiremen could breed, and I think I am right in saying that he is still unbeatable. No apostle of inbreeding has put one down to beat him; therefore we may presume that breeding from unrelated stock is as successful as inbreeding if you want to produce winners.

The same remarks apply to Mr. Sam Cook's clear buff Norwich cock. I am open to correction on this point, but I believe I am right in saying that this bird was bred from the Grewar buff cock, winner at Scottish National, and he has proved himself a top-notcher this season. (See note at end of lecture.)

Inbreeding Alright, Sometimes.

I believe Mr. Cook does a little inbreeding, but then he has the stock to do it with. He simply could not go wrong with his stud so long as he did not go too far, and we may trust our friend with the level head to know when to stop and when to purchase fresh blood. But I shall expect him to give us a few instances of any successes he has had when he has had recourse to inbreeding—any champions he has bred.

I have shown you what ought to be expected from inbreeding with the right stuff by a fancier whose heart is full of zeal and whose pocket is full of John Bradburys. But is it worth it when the cost is considered, and when you can see living examples of the best in their varieties produced by brainy fanciers without resorting to inbreeding with all its intricacies and its undoubted predisposition to disease, for, in spite of the inbreeder's protestations, it is a fact that breeding from relatives has that tendency. I believe it to have an effect upon young failing to hatch, and eggs being addled, and, when hatched, failing to rear. Even when reared, I have proved that they are more predisposed to inflammation and other epidemics than young from unrelated stock.

In support of this contention I will refer you to a branch of the fancy where inbreeding is practised on extensive lines, more so than in any other branch. Some of you, no doubt, keep fowls. If you are interested in the laying hen, you must have noticed that the White Leghorn and the White Wyandotte—the two most popular breeds for eggs—have been inbred tremendously the last few years, so much so that two years ago there was a universal clamour for a halt.

(To be continued.)

Nests of Birds, Poultry, etc., should be regularly sprinkled with KEATING'S POWDER, especially when hens are sitting. Don't forget to do this just previous to the eggs hatching, to destroy the Red Mite. Kills all insects. Harmless to everything else.

The Kea, the Kaka, and the Kakapo.

New Zealand Parrots Which Have Changed Their Characters.

By L. B. Thoburn-Clarke.

(Continued from page 186.)

IN order to experiment with the Kakapo, he took one which his dog had caught, and, selecting a wide flat with sufficient open space for his purpose, he liberated the bird. It made no attempt to fly, or even to open its wings, but ran with extraordinary rapidity towards the nearest trees, its gait resembling that of a hen.

The aspect of the Kakapo is peculiar, and has gained for it the name of "Owl-faced Parrot," but in captivity it is intelligent, social, and affectionate. Sir George Grey described its behaviour towards its owner as more like that of a dog than of a bird. It would run from the corner of the room and seize hold of his hand with bill and claw, and roll over and over like a kitten. It would then let go the hand and retreat to the corner, only to run out again and repeat the performance. The approach of a dog towards its cage was greeted with outspread wings and a pretence of anger. When the dog retreated it showed its pleasure by the most absurd antics and postures. When extremely pleased it would nestle down on its master's hand, ruffling its feathers and lowering its wings, fluttering first one and then the other, at the same time shaking its head from side to side.

At that time the Kakapo was evidently very plentiful, for the old Maoris repeat legends of its having been very numerous in the North Island, but the cause of its complete disappearance from that part of New Zealand remains a mystery.

After the extermination of the Moas and the kindred birds, the Maoris, essentially a flesh-eating people, must have been in sore straits for animal food. Eels certainly abounded in the lakes and swamps, but other fresh-water fish were not to be had. The only animal reared by themselves and eaten was the woolly-haired yellow poa dog, consequently, when the annual shark fishing proved a failure there was no flesh-food to be had.

Probably the Kakapo, which burrowed in the ground and was easy to capture, was soon exterminated in the North Island, where the greatest number of Maoris lived. These times of food scarcity were often prolonged, and I have heard old Maoris say that their ancestors, after they had killed and eaten all their slaves, and exhausted all their food, had to fall back upon the roasted roots of the bracken.

I have never tasted a more unpalatable food, and wonder that the Maoris did not exterminate all the ground-feeding birds of New Zealand rather than partake of such fare.

An Important Discovery.

What the Maoris' lack of flesh-food did in the North Island the settlers' dogs and cats did in the South Island. Unfortunately dogs have run wild, and these packs of animals soon destroyed the guileless Kakapo, and it has become very rare, so that the report that Mr. R. E. Clouston, a mining engineer, has discovered a colony of Kakapo on the Gouland Downs, south of Collingwood, will be received by naturalists as being very important news.

Most of Mr. Clouston's work was done at night, by the aid of strong acetylene lamps, and he was thus able to observe the habits of these night Parrots fully, and to discover many things which were not previously known.

The fact of the Kakapo having been found on the Gouland Downs is interesting, as this, being a bird sanctuary, is controlled by Government, and these curious and interesting Parrots will be protected in the future. Perhaps, too, the controversy about the bones and muscles of their wings will be finally settled.

In the early days of the Commonwealth the Kakapo trails were often taken by the settlers for tracks made by human beings. These are frequently fourteen inches wide. Mr. Reischek, an Austrian naturalist, who observed the habits of the Kakapo, stated that these tracks were usually made along the spurs of the hills.

He found that when the hills were covered with snow the birds still travelled over the surface, keeping to the same route. Where, however, the dense scrub, consisting of silver pine, ake-ake, and alpine vegetation, prevented the snow from penetrating to the ground, the birds lived in their burrows during the winter, the darkness under the snow apparently making no difference in their obtaining the food they required.

When the snow began to melt in the spring the Kakapos emerged and crouched in the sunshine, evidently enjoying the warmth. They were, no doubt, sleeping, for Mr. Reischek found some, after the snow had melted, sitting on the low branches of a silver pine. He approached quite close to them without their evincing any alarm; only when he had caught them did they attempt to free themselves by biting and scratching.

This naturalist, like so many others who had observed the Kakapo in the days when it was plentiful, stated that the flesh was delicious, and far better eating than any other of the native birds, so, now that the Kakapo has been rediscovered, it is just as well that it is in a protected area, or perhaps it would be exterminated by the settlers who might wish to taste a dish of roast Kakapo.

Two Seasonable Books.

At a season when the attention of all lovers of birds of our country is turned to the observation of them as they live, when thousands will be taking country rambles for the purpose of watching their nesting and breeding habits, and thousands of others would devote to the same purpose such leisure hours as they may now be able to snatch if they knew of the delights awaiting them, and had the knowledge necessary for their proper appreciation, the re-issue of the beautiful work, "*Britain's Birds and their Nests*," by A. L. Thomson, with coloured plates by the talented artist, Mr. George Rankin (W. and R. Chambers, London and Edinburgh, 15s.) is especially opportune.

In the preface the modest statement is made, "The main reason for the publication of this book is Mr. Rankin's magnificent series of 132 coloured plates of British-nesting birds." If this were the only instead of the "main" reason, the book would be welcome, for it is not too much to say that almost any half-dozen of the plates are in themselves full value for the price charged for the complete volume. The colour tones are marvellously rendered, and each picture is a work of art worthy of separate preservation if only as a picture. Nests are shown *in situ* where possible, each containing a full clutch of eggs, and in cases where this is not practicable, such as, for example, the nest of the Swift and the Woodpecker, an egg drawn to its proper scale in relation to the size of the bird is shown in an inset.

As to the text, the purpose of which is stated to be "to give in popular language an account of the natural history of British-breeding birds," we can say that the purpose is admirably effected. We have put many of the statements to the severe test of practical knowledge, and have failed to find a flaw. Besides being accurate, it is written in a most interesting manner, and there is not a "dry" chapter from end to end of the book.

In outward appearance the volume would be an adornment to any library, and it is a book that no bird lover can afford to be without. If it needed any further recommendation we would say that the price remains the same as before the war, but we understand that Messrs. Chambers may not be long able to offer it without increasing the price.

British Birds and their Eggs, by J. Maclair Borastou, M.B.O.U., W. and R. Chambers, London and Edinburgh, 6s. This is essentially a book for the beginner. With this volume as a guide, the identification of any bird that may be observed is rendered a matter of a moment even for the most inexperienced, for instead of classifying the birds under scientific headings, they are grouped under such headings as "Black Birds," "Black and White Birds," "Long-legged Birds," etc., and in most cases a few words printed in italics, as, for instance, "The Blackbird is the only bird with plumage entirely black which habitually hops" dispel any doubt that may momentarily exist. A classified list of birds, with their scientific names is appended for the benefit of those who would seek in more ambitious volumes for more information than is given in the book, but all that the ordinary observer may wish to know is detailed. The plumage of each bird is fully described; its eggs and nest, its distribution throughout our country, and its habits are all set forth in popular language so as to be fully understood by the veriest novice. It is illustrated with 120 coloured plates of birds from drawings by the author, and 16 coloured plates of eggs. The pictures of eggs possess a special value in that they are drawn to actual size, for the variations in colouring in the eggs of many species are so considerable that a single coloured representation, however accurate it may be, is apt to be misleading. One of the handiest books we have ever perused. The present price, 6s., may have to be raised in the near future.

Correspondence.

EVERY WEEK A PRIZE OF TEN SHILLINGS IS GIVEN FOR WHAT, IN THE OPINION OF THE EDITOR OF "CAGE BIRDS," IS THE BEST LETTER PUBLISHED UNDER THIS HEADING. THE LETTER MAY BE ON ANY SUBJECT. IT MAY BE A COMMENT, FOR OR AGAINST, ON ANYTHING WHICH IS PUBLISHED IN OUR PAGES, AN OPINION ON THE POLICY OF OUR PAPER, OR MAY HAVE NO REFERENCE WHATEVER TO ANYTHING WHICH HAS ALREADY APPEARED. SO LONG AS IT IS ON A "BIRDY" SUBJECT, AND IS ORIGINAL, IT WILL BE ELIGIBLE TO COMPETE FOR THE PRIZE.

The Prize this week is awarded to Mr. F. Elsom, 86, Main Ridge, Boston, Lincs.

From a Prize Winner.

SIR,—I beg to acknowledge with thanks receipt of your cheque for 10s. as prize for contribution to your correspondence column.

I have felt some diffidence in accepting it, as my letter was sent without any idea of competition or reward, but merely, as stated therein, as an acknowledgment of help received through CAGE BIRDS, which I desired to repay to some extent by trying to help others through the same channel.

Thinking, however, that there was no way of declining it without disorganising your scheme, I have decided that it is best to accept, with reiterated thanks.

J. T. WHITAKER.

(In the absence of any intimation that a correspondent does not wish his or her letter to be understood as competing for our weekly prize, we can, of course, only award the prize on the merits of the [illegible]s published, and the letter from Mr. Whitaker was distinctly the best one of the week. Correspondents who do not wish their letters to be treated as being competitive will oblige if they will either sign them with a pseudonym, or will endorse them "not for competition."—ED., CAGE BIRDS.]

A Question of Double Mating.

Are Bullfinches Polyandrous.

SIR,—I noted recently an account in the "Bazaar Exchange and Mart," which stated that in an aviary belonging to Mrs. C. A. Longdon, a Bullfinch had nested, and among the progeny were some young Bullfinches and a Hawfinch-Bullfinch Hybrid. A cock Hawfinch was in the same aviary with the pair of Bullfinches, and it was presumed that the Hawfinch had fertilised one of the eggs and the Bullfinch cock the remainder. The contributor of the paragraph says this is not only possible, but (in the circumstances) probable. Would some of the experienced readers of CAGE BIRDS say whether this is possible, not to mention probable? Unfortunately, as seems to be always the case with extraordinary Hybrids, something happened. In this case the presumed Hybrid escaped through a hole in the netting. ENQUIRER.

Rearing Young Canaries.

A Novice Gives His Experiences.

SIR,—Having read in CAGE BIRDS different opinions appertaining to the many modes of rearing and feeding young Canaries, I should like to give you my experience, although I am only a novice of three years' standing in the fancy. My first move was to join a cage bird society and attend different shows, getting into conversation with the different champions, and receiving some very useful hints. Finding out which variety I appreciated most during the first months, I secured from one of our members a couple of good pairs, well matched by him, and then I was all ready for launching out.

I only use double breeding cages, as they are handy to run the young in if the hen should be inclined to pluck their feathers, and they make a fine nursery cage. Mine are all made of tin and loose fronts, as I find they do not harbour that pest, the red mite, like wooden ones, and they are easily cleaned and washed out. The perches are the same size as in the Yorkshire show cages, and are not smoothed up, but just left as planed, as I think it gives a better grip for the birds.

I always feed my birds on the best Spanish canary seed, and just about February I give, in addition, half a teaspoonful of egg food fresh twice a week, and on two other days a good pinch of maw seed in the egg pan. I do not mix it with the usual seed, as I find that the birds waste the seed looking for the maw. I also give a little ripe apple, or failing this a piece of raw onion, and I find the birds appreciate this and show a very great improvement, but I make the Canary seed their staple diet.

When the hen has laid I take away the eggs as laid and give a dummy in their place till I get the fourth, and when the hen has laid the fourth egg I clean out the cage and make a new nest ready to put in place of the first one. I take the old one out and burn it right away. I also take the cock bird away. I give her the new nest (made of charpie and hair) containing the eggs, and let her sit them herself. I never disturb her again, only for feeding and giving her fresh water twice daily, and do not again clean the cage till the young are hatched and are four or five days old. I dust the nest with some Keatings, and give the hen a bath while she is sitting in which I have dissolved some quassia chips. I find that it keeps the insects from worrying her so much, at the same time helping the hatching process.

On the thirteenth day I make up a little egg, so as to give her first thing in the morning, and I am up early and give her half a teaspoonful in the egg pan. I am at work all day, so my better half continues the duty of feeding again at mid-day, and then I myself at 6 at night, always cleaning the egg pan out before putting fresh in. This I do for three days.

I mix my egg food as follows: The yolk of an egg and three times as much of bread crumbs (the bread just a day old). I also add a little maw seed, and scrape some cuttle fish bone very fine and add to it, mixing the lot well together. I find that this mixture keeps nice and sweet, and the birds seem to develop more quickly, and are finer birds than if brought up on the egg food alone without the maw and cuttlefish.

I give the hen plenty of chickweed after the fourth day, as I find that she seems to feed better and not get slack. On the 10th day I give her hemp, not cracked or crushed, leaving her to crack it, thereby keeping her off the nest a little longer, and letting the young get a little more fresh air. I should have stated earlier I leave a dummy egg in the nest so as to stop the hen from crushing the eggs and also from laying on and smothering the young. When the young have left the nest and are beginning to pick for themselves I always give them rape seed which has been boiled, and a little egg food, to which I add a small portion of Plasmon powder or broken groats. I hope that the few hints I have given may be of some use to others who are, like the writer,

ONLY A NOVICE.

Forcing Birds Into Moult.

A Criticism of Editorial Action.

SIR,—I was greatly surprised at your refusing to publish "Rambler's" method of forcing birds through the moult. I surmise it would be what we term box-moulting, and is a common practice in some districts, especially among catchers who must have their birds through moult and on hard song by the end of August for the catching season. If they had not plenty of song they would return with an empty store cage, and so these fanciers adopt the forcing method, and have their birds ready ten to twelve weeks earlier than nature would have had them. I must say there are a large number of birds lost annually by this method of box-moulting by inexperienced fanciers, but surely if these fanciers can be enlightened on the subject many of these birds could be saved, and I say it is up to us to do so. Only recently I read in CAGE BIRDS that someone was advising fanciers if they had any secrets to publish them. "Rambler" gives us a good one, and it cannot be published. I have been a fancier for thirty years of British hard and soft billed, and have had my share of prizes, and my birds always look well, and at times I have to be cruel to be kind.

S. RICHARDS.

[This letter carries a complete justification of our refusal to publish details of a cruel practice. Our correspondent admits that "there are a large number of birds lost annually by this method of box-moulting by inexperienced fanciers." This is just the reason why the details were not published. It is not our aim to teach inexperienced fanciers to become perfect in a cruel practice in order to save their pockets. We would much rather that they learnt to avoid it through their failures. Neither do we wish to instruct would-be bird catchers as to how to force a bird into a moult "ten to twelve weeks earlier than nature." The hundreds of beautiful Linnets that are exhibited every season at bird shows are moulted in a natural manner, and at the proper season, and if it is necessary for Linnets used as call birds to be treated in an unnatural manner, bird catchers must find out the details for themselves.—ED., CAGE BIRDS.]

(Correspondence continued on next page.)

CORRESPONDENCE.

(Continued from page 224).

40 Young Yorkshire Canaries Already.

A Believer in Early Pairing.

SIR,—I thought that it may be interesting to some readers of CAGE BIRDS to know that I have 40 young Yorkshires, some on the perches, in spite of all the cold weather that we have been having lately. Why not breed early Canaries as well as early chickens? I have done so for years with good results. I always pair up in February if the birds are ready.

E. WILLIAMS.

A Homing Redpoll.

SIR,—In view of an article in your valuable paper, CAGE BIRDS, some weeks ago, on "Homing Song Birds," perhaps the following will be of interest.

I am the fortunate owner of a Redpoll which is a "Homer." If the window is left open he flies outside, and is away for hours at a time. He comes out of the cage (a "Crystal Palace") by pushing aside a loose wire in the door, the door never being opened, as there are with him in the cage about half a dozen small foreigners. I should be glad to know if any readers have had, or heard of, the like.

ROB. FERGUSON.

Red Mite and Insecticides.

Carbolic Acid and Petrol.

SIR,—Calvert on his carbolic acid bottle, states that no disinfectant is effective unless a poison. Red mite breed through eggs. It is a fairly simple matter with carbolic or petrol to destroy the insects, but I have found no way of destroying the eggs except by consistently disenfecting or cleaning. Carbolic and sweet oil can be used on birds or animals, but personally I prefer one part of petrol to five parts of milk. If the petrol smell is offensive add a little scent.

J.M.L.

A Vote for Camphor and Spirit.

SIR,—With reference to the letters appearing in CAGE BIRDS of April 7 and 14, with regard to this pest to Canaries, may I, as a novice, breeding only as a hobby, express my opinion? I have found that there is nothing to beat the simple remedy which I give below, and which can be used without any fear of injury to the birds or cages. Take 2d. of spirits of wine; place into same a piece of camphor, the size of a Spanish nut; shake well until dissolved, and then add a teaspoonful of carriage oil. Shake well before using, and apply with fine camel hair brush thinly around the crevices, inside and out, once a week during the breeding season.

G. QUESTED.

Some Hints to Novice Fanciers.

Large Hens or Small Hens?

SIR,—At the commencement of another season's breeding, perhaps a few hints to novices will be of value, but I will confine myself to one variety, the Norwich. One of the first questions a person ought to ask himself is, What is the object in view? If it is to produce winners, then he should make a study of the ideal Norwich, or make it in his way to see some of the big winners, get the ideal fixed in his mind's eye, and when he succeeds in breeding young that correspond with his object, he will not need to ask a champion exhibitor into his room to tell him that he has bred a good bird. I think this fact is overlooked by many fanciers, with the result that they keep amongst the novices, and are constantly disappointed. With an object in view you will get that uniformity of standard that is found in the rooms of successful exhibitors.

The next point of importance is that of pairing the birds. Your correspondent, Mr. Gibbons, places special emphasis on the hen, and rightly so, but I beg to differ from him in respect to size. The medium or small hen I consider the best, with all those essential qualities that go to make a show bird, paired to a big bony cock with a good head. Make sure you have size in the cock, and the result will repay you for your trouble. The medium or small hens prove the most energetic feeders, and a good deal depends on how the young are fed as to whether they will excel or lack size. I feel sure that the novice who sticks to these two important points in the breeding of Norwich Canaries will have made a great stride towards attaining that success so much desired.

HY. HUGGINS.

Sparrows as Food.

How to Prepare them Quickly.

SIR,—Lord Devonport personally recommends Sparrows as being good food, but, according to the extract from the "Newcastle Daily Journal," which appeared in CAGE BIRDS of March 30, some people find their preparation a tedious matter. May I, therefore, offer a tip to any who would like to taste them.

Cut off the head, pull out a few breast feathers, make a slit in the skin, and strip off skin and feathers together. Fifty birds may thus be prepared in two hours, and they are good food; I have dressed great quantities.

G. A. ROBINSON.

Some More Seed Questions.

SIR,—Kindly thank Mr. E. W. Humphrey for answering my questions so fully and in such a practical way. Will he tell me in what months are the following quite ripe, viz., teazel, shepherd's purse, knapweed, and dock. I would be very pleased if he would kindly tell me how to separate and preserve the seeds of the teazel.

NOVICE.

[While we are inserting the above letter as desired, and shall, of course, be pleased to publish any reply, we would mention that in due course all the particulars asked for will be given in the articles by Mr. Morse that are appearing weekly in CAGE BIRDS. Readers should make a point of keeping these informative articles for reference.—Editor.]

The Tameness of Wild Birds.

And a Story of a "Robin in a Church."

SIR,—A while ago I read many interesting letters in your valuable paper about the wonderful tameness of birds in the then very cold weather. Just opposite the little aviary where I keep my few Canaries is a tree, and here, in the cold weather, as soon as I opened my back door to go to feed my birds (or my neighbours to feed their fowls or pigs) would congregate numerous birds till the tree was quite black. There were Blackbirds, Thrushes, Starlings, Sparrows, and, not quite so close, two Rooks, and still closer, a little Robin, who would even stand on my foot to eat his little bit of suet whilst I kept the Sparrows away. Strange to say, although he has such a name for being "cock of the walk," he was frightened of the Sparrows.

I had only to whistle and call "Bob" if he was not present, and he would quickly appear from somewhere, and follow me up the garden, and sit and sing while the fowls were being fed with their soft food, for he knew his little bit would be put on top of a post. One of my cheeky Greenfinch Mules would whistle and call "Bob" just as I did, and so plainly that I thought it was a saucy boy at first.

I had acquaintance with this Robin in the early summer of last year. Just opposite me is the beautiful City Cemetery, and it is here he has his home. I had been to see someone buried, and no sooner had I got into the Church than I said to my friend that there was a bird about (I knew this by the inevitable marks on the pews), though I could not see him. The service began, and at the first pause he made himself heard with a gush of song, but ceased as soon as the clergyman resumed reading. At every pause the bird filled the building with song, now in the rose window close to the roof, now on the white flowers covering the coffin. It was the Red Breast, and anything more beautiful is hard to imagine. I read some time ago in CAGE BIRDS that of all singing birds the Robin is the true artist, never interfering with or trying to sing another down, but awaiting his own turn. This I have proved many times, and here was another proof. On leaving the building the Robin was shut in, and I went to the sexton and told him. He said that it was useless to drive it out, as it would go in again at the first opportunity. But how will it do without food and water?" said I. "Oh" he said, "it will be all right, it can get food and water." His wife told me that a few years ago another Robin was so tame that it not only went in the Church, but came into her cottage, which is in the cemetery grounds, and on to the table and helped itself to what it liked. It was in and out for four years, when a cat caught it; she ran after it, but could not save it. It is strange how one misses a little thing like that, but she did not forget it for a long time.

It might interest you to know that the one-legged homing pigeon I told you about returned at the end of three days on to the window sill of the room where the cage was in which it had been nursed, and as soon as I opened the window in it came, a sadder and a wiser bird. It ate till its crop swelled out, and its little head rested on it; then it slept all day. It is still up with the fowls, and gets about on its stump finely.

(MRS.) E. M. SARGEANT.

The Sizes of Store Cages.

SIR,—Will Stoker Stowe please accept my thanks for answering my questions so promptly? I would also be pleased if he would kindly answer the following questions. He advises E. J. Brown not to place more than four Goldies in the same store cage. What length, width, and height are the cages referred to? How many birds could I place in a store cage 3ft. long, 8in. wide, and 10in. high? How many call birds and brace birds does Mr. Stowe use for catching Goldies? Any other information he can give me will be thankfully received.

J. D. G.

Mules and Fertile Eggs.

How Records are Sometimes Made.

SIR,—In the "New Sporting Magazine," February, 1842, page 151, in an article on "Dogs, their origin, etc." by H. D. Richardson, the writer states: "I once saw a Mule bird between a Goldfinch and Canary and was shown eggs which the owner assured me were laid by it, and these eggs proved productive. This was, I acknowledge, a most extraordinary case, for when these Hybrids proved fertile I usually found it was the male and not the female which did so."

The above is culled from an article on the origin of dogs. It may or may not be reliable. It does, however, prove that there was Muling in 1802, and that the word "Mule" was then freely used.

J.W.L.

After 75 years of mis-usage, we think it time that the word "Mule" as applied to a bird was dropped. With regard to the presumed fertility of Hybrids it will be noted that the case quoted is another of the hearsay authorities. The old writer says he was "shown" eggs, and was "assured" that they were laid by a "Mule." He does not say that he knew them to be the produce of a Hybrid hen. All he says of his own knowledge is that they proved productive; the statement as to their origin he accepted from someone else, and many of the presumptive cases are based on the same kind of authority.—ED., CAGE BIRDS.]

How Bird-keepers Make Trouble.

And How it May be Avoided.

SIR,—There is a quaint old saying that "Prevention is better than cure," and I think it is a very true saying. It is a fact well-known to breeders that the cause most frequent in producing disease is first the eating of food which is too rich, and the consequent overloading of the stomach. Perhaps the next great evil is the want of sufficient fresh air, and close confinement in a small cage is a great enemy to the bird's health.

Other illnesses may be engendered through neglect. Some fanciers give their birds egg and bread, chickweed, cabbage, lettuce, dandelion, groundsel, etc., in unmeasured quantities, and then the birds amuse themselves, after having satiated their appetites, by throwing the former into the bottom of their cages, and by pulling the green food inside as well. This is the result of giving birds more food than they can possibly consume in one day. In the course of a little while it becomes sour, and then if they partake of it, as they will do at times, the consequences which usually ensue are cases of diarrhœa, or, still worse, inflammation of the bowels or intestines, which if not promptly attended to, result in death. Others again give them sour greens, or bad water, or allow the water to remain in the pots until it gets loathsome and unfit for use; these and similar causes of neglect produce more than half the illnesses from which birds die. I always supply my birds with plain wholesome diet, but never pamper them with dainties.

Be particular always to procure the best Canary seed and genuine sowing rape seed, and give in the proportion of three-parts Canary to one of rape seed. Occasionally, I give a little linseed and a few groats, and from April to September a little fresh green food, either watercress, groundsel, or lettuce. Dandelion leaves may be given sometimes, but they ought to be well washed and immersed in water for a few hours previously. In winter time you may give a little sweet apple, with the rind taken off, and give them this about once every week. When in health and not breeding they require no other food, except to prepare them for exhibition.

Let them have as much fresh air as possible, and be sure to give them fresh water every day. If there is any reason to doubt the purity of the water you give the birds to drink, it is a good plan to filter rain water for their use. Let the cages be roomy, and clean them out frequently; use sea sand when procurable, as the salt which it contains is beneficial to them; if you cannot succeed in getting it, any common sand will do. By observing these recommendations you will seldom be troubled with diseased or ailing birds.

F. ELSOM.

At It Again.

A Persistent Hen.

SIR,—I thought you would be interested to hear that the hen Canary I sent you word about last year had reared the fifteen birds, and is now beginning 1917 very well. I expect you will think perhaps too well.

In January this year she would go to nest, laid four small eggs, and sat one week, and then laid five more eggs to those already in the nest, making nine. She would sit them out, but, of course, they turned out unfertile. In February she laid five more, and hatched out four on the 1st of March; the other egg had a bird in it, but it did not hatch out. She reared them herself, and they are now four very nice birds, two clear yellow, two slightly marked.

On April 1 she laid again, and there were four in this clutch. Unfortunately I broke one egg, but she is sitting on the three, and her time will be up at the beginning of next week. Don't you think she has been a little wonder considering the very hard weather we have experienced this year?

(MRS.) F. SHAW.

The Federation of Roller Societies.

A Possible Solution to the "Drastic Rule."

SIR,—Kindly allow me space in your valuable paper to bring before members of the Federation and Roller Fanciers in general a possible, nay probable, solution of this vexed question. I have received from the Haslingden Club a resolution in the following words:

"That rule 6 of the Federation be deleted, and in its place the following be substituted:—That no bird be allowed to contest in young bird classes at any Federation show unless wearing the Federation ring, N.7." I think this is a possible way out of the difficulty, and I ask all members of the Federated clubs to show their interest in this question by sending their vote to the secretary of their club, and to give a direct vote for or against the Haslingden request. I hope all clubs will stand by the decision of the majority. There is no doubt that it will have to be altered, and to my mind there could not be a better way than this, so will club secretaries attend to this at once.

H. BEST,

The "Third Party" Gives His Ideas on the Old and the New Bell Glucke.

SIR,—As a thirty years' Roller breeder, I ought to know something about them, so I should like to say a few words concerning them, as I have every reason to believe I am the third party referred to by Mr. Tomlinson, and your other correspondent, on page 189 of CAGE BIRDS.

Firstly, I should like to say a few words re "Drastic Rule"; a fancier, with the welfare of the fancy at heart, cannot call it anything else. I have been in the fancy a long time, and I always believe in give and take, and I have written numerous letters to private individuals, and to one or two leading secretaries as to all being allowed to exhibit together in young bird classes. What matter whose ring they wear, so long as it is a recognised club ring? Every Society makes the stipulation that their specials are for members only. We have big shows now, but they would be larger if we were all allowed to compete together, and if those in authority would put their heads together, as brother fanciers should do, the above could easily be done.

I can give the exact date when myself and Mr. Tomlinson visited your correspondent's place; it was Nov. 5th, 1912. The remarks as given are quite correct, as the different Gluckes then were chiefly called by the breeder's or dealer's name the birds were purchased from. I well remember Mr. Tomlinson saying the two Gluckes in question were Bell Gluckes and Hollow Gluckes, and I could not differ, as it was also my opinion, but the majority of the Gluckes of the present day are quite different; some Bell Gluckes are hardly distinguishable from Hollow Gluckes. I have heard them in almost every key above the Hollow Roll, but I cannot understand one getting Bell Glucke for Deep Glucke, as they are far removed from each other, as the Bell sound entirely disappears the deeper the tone of the bird gets, and as your correspondent says, certainly a bird

(Continued on next page).

HEALTH & STRENGTH

Deals with all kinds of athletics, including Football Wrestling, Boxing, Weight Lifting, Fencing Running, Ju-Jitsu, Gymnastics of all kinds, Swimming, &c., &c. Gives free advice on all questions of Health, Diet, &c. to all readers. EVERY THURSDAY, 1d. Sold Everywhere. Get a copy to-day, or send for Free Specimen to "Health and Strength," Windsor House, Kingsway, London.

CORRESPONDENCE.

(Continued from page 225).

with separate and distinct Gluckes should get credit for the same if worth it.

I and several other fanciers that I know have birds that sing as many as four, all easily distinguishable from each other, and it is very annoying when you send them out to get credit for two, sometimes only one of them. I can quite agree with Mr. Tomlinson and Mr. Shepley when they say the Bell Glucke birds bring Koller-like Tours. I have one that has brought a lovely Water Glucke, and there seems to be a nice Hollow Roll running at the same time. I also have others singing what I suppose Mr. Tomlinson calls one form of the new Bell Glucke. To me it sounds like double Glucke, as there are two distinct sounds running out the same time, but they are repeated in quick succession, the Bell sound predominating. Mr. Tomlinson gave me exactly the same number of points for it as a prominent Southern judge, and as a Northern customer of mine said, it is a Bell Glucke that no one could reasonably object to, as it is quite (as Mr. Shepley says) a major third lower than the old Bell Glucke.

I have an old favourite, rung 1911, singing the old clear ringing Bell Glucke, which I think is as worthy of points as most Gluckes, and a youngster trained under it has won first and second prizes for its new owner under different Northern judges this season. I have every confidence that Bell Glucke and Glueke Roll will be added to their judging standard at no distant date. I have had Bell Glucke birds for seven or eight years, and I am perfeotly satisfied with the results, for I generally get in the prizes when showing.

I cannot agree with a prominent Northern judge when he says the Roller song has deteriorated this last ten years through introducing certain tours, and that they were more faulty. I have exhibited seven or eight birds lately, all Bell Glucke bred, that averaged a total of good points, quite free from faults; one had not even a card, but they would have exceeded by far the total of a noted Crystal Palace winner of that date (1907), and a few others I could mention. One could get first then with from 22 to 27 points; it requires 28 to 34 points to win now. If we were to take away all the different Gluckes, and the variations they bring, we should have a very poor Roller song left indeed in the humble estimation of yours truly, who does not desire a free advert., so will sign himself

OLD BELL GLUCKE.

A Protest Against Rule 6.

SIR,—I would, with your kind permission, like to reply briefly on the above subjects. When writing, either voluntarily or by request, I have endeavoured to make my meaning so precise that even the merest novice may be able to follow the description I have given of the various song passages. I have always tried to avoid any spirit of arrogance, and what I have to say now is not in any way antagonistic or peevish. Like Mr. Willows, I welcome fanciers' views on Glucke tours, and I give to every writer the respect for his opinion that I would claim for my own.

I am not responsible for setting up the confusion of ideas between a rapid Hollow Glucke and the "New Bell Glucke." Crudely, this rapid H.G. and an accompanying series of low-toned Bell notes, comprise what I termed the New Bell Glucke. Mr. Willows opines that it is the old B.G. coming up again. To the casual observer it may appear so, but, technically speaking, to the experienced ear there is a difference, so that, although the difference does not alter its category as a B.G., it is not, to be precise, rendered in the same way as the old style of B.G.

In describing this difference, please note I am referring to the young bird. In the old style of rendering the tour was sung more slowly, and the Glucke portion closely resembled the slower type of Hollow Glucke; the Bell notes also came more slowly, clearer, and with the true Bell ring. Its propensity to fault was found in its inclination to sharpness of tone.

In the New Bell Glucke the Glucke and Bell are more rapid, the Bell is lower in tone, and not so distinct in its Bell ring, and, so far as my experience goes, the tone, even if to faultiness, is flat. Yet to my mind all this is a mere detail. What I wished to point out was that, in view of the trouble the "chopping" rendering of B.G. was causing and had caused, this new B.G. would give more satisfaction than the old style; also, when so many fanciers were grasping this new style, that it was unlikely the Federation would take it out from the judging standard, a point not a few were waiting to see.

Then Mr. Montague said my description was not a new B.G., but a Water Glucke. A series of Bell notes coming over a distinct W.G. would not be either a W.G. or even a Bell Glueke, in my style of calling a spade a spade, but a "Bell Water Glucke." I have not heard one, but I know a fancier who has such a tour. I have heard the metallic ring of a Bell embodied in a W.G.

Mr. Willows' parallel of Hollow Bell and the Bell of the B.G. is one I cannot see, because the Hollow Bell is a tour in which there is always a more or less downward movement of the voice, and it is difficult to say where the base of that movement is going to rest. The Bell of the B.G. is a series of notes, and in breeding for depth, as the fancy is doing, why should a Bell note sung on a level with, or maybe below, the pitch of a Hollow Roll become void, and only the Glueke portion of the tour be recognised? This is not calling a spade a spade.

This is, Sir, I hope, my last letter on the B.G., and in leaving the subject I would desire to let our fancy in general know that I have no shares in any Bell Glueke company. My time and labour have been expended for the benefit of the novice, and for those who have had the good rendering of the B.G. tour. To the former I have now for some few years said, "Beware of B.G., as it taxes the ingenuity of the experienced to keep it to its normal tone; keep your hard-earned money in your pocket." I have advocated a place on the judging standard for those who have the good rendering of the tour, and I asked for space to penalise bad or faulty rendering, so as to protect those who had the good tour. The B.G. has never been any favourite of mine, yet in meeting with a good tour I have always given it full credit, as I should advocate a place on the standard and credit for any other good tour.

In concluding my letter on B.G. allow me to appeal to our fancy not to send out B.G. tours to novices as being good B.G. because they have not been penalised on the show bench. The tour I am alluding to is one wherein the Glucke may be good and the Bell notes offending, not sung to you, but sung at you, and distinctly pointed. No note that is forced and pointed can come under the category of being a good one, even though it is not bad enough to penalise. The point at issue is, does it please the ear, or does it offend?

With regard to rule 6, I would now like to strike a personal note. Up to the moment I had the exhibitor in mind, and "now they can ring with two rings." The rule is now being voted upon, and I decline to use my vote to restriot the freedom of any exhibitor, neither am I using my vote to vote away my personal freedom as a judge. I hold, without being antagonistic or ranoorous, strong views upon personal rights of freedom, where such has no harmful or evil intent, and upon respect for the opinion of others, and if the exhibitor likes to restrict his limits of exhibiting he should not restrict my freedom as a judge.

I am, I hope, too open minded to bear malice, and if this rule is carried it will not make the slightest difference to my feelings for any of my fancier friends to know that they hold a different point of view to my own. It means that I shall be reluctantly compelled to withdraw from the Federation honourably, because if Rule 6 is carried in its entirety I should advocate freedom and fight for it—and pay the penalty. To my mind this Rule 6 is the only blot upon the rules, straightforward and manly rules, which were issued in the making of the Federation. It goes beyond the pound of flesh and asks for the blood also. The B.R.C.C., who I am not advocating as being without fault (who is?) never restricted me from judging where their patronage was not given. Had they done so I should have had to withdraw from that body, because there was no harmful or evil intent to the B.R.C.C. in my judging for others, and I suppose it was beneficial in some way to the other party.

I appeal to those fanciers who object to their liberty being curtailed to make up their minds as to their future course of action now, and if they decide to remain with the Federation, then accept its rules and not set them at defiance, for it would mean paying the penalty. In imposing this it would be a disagreeable business for both Federation and the offender, and who knows whether the same fancier friendship could then be maintained as would exist were the withdrawal to take place at the outset? In the future, be it sooner or later, there will be unity again amongst us, and in the meantime let each of us do the best for the welfare of our hobby, recollecting that it is human to err. Might is not always right, and it does not follow that, even should the majority vote for Rule 6, that the majority is right, and the minority in the wrong. It is said that Rule 6 is a reprisal; it goes further, and adds injury to innocent people in the retaliation. Had it stopped at a reprisal, claiming the same restrictions that the B.R.C.C. had done for their rings, who could have made any objection?

J. TOMLINSON.

Queries Answered

(1)—All questions must be clearly written in ink (or typewritten) on one side of paper, and conclude with either the correct name or a pseudonym.

(2)—The proper name and address in full of querist must always be written on a separate sheet of paper, and enclosed with the query.

(3)—Queries intended for different specialists must be written on separate sheets of paper.

(4)—Queries must not include or be included in orders for books, instructions re advertisements, or any other matter for publication.

(5)—The department to which the queries refer must be stated on the left-hand corner of the query.

(6)—Queries received during any week, up to the first post on Saturday morning, will be answered in the issue bearing date of Saturday in the following week.

(7)—If an answer by post is desired from our specialists, a postal order for sixpence must accompany any query relating to sickness of birds, or a shilling in ordinary enquiries, with a stamped and addressed envelope in either case. Dead birds must not be sent to the office (see Post-mortems).

(8)—All who desire letters of complaint written to advertisers must state grounds for doing so clearly and fully, and enclose a fee of sixpence.

(9)—All queries must be addressed to the Editor, "Cage Birds," 154, Fleet Street, London, E.C.4. Postcards are not admissible.

CANARY QUERIES

Answered by CLAUDE ST. JOHN

IS IT TOO EARLY?

S. W. B.—No, seeing that both birds showed distinct signs of a desire to nest at once, I do not think you were premature in putting them together, and although the cock has so completely ceased singing and appears to take little notice of the hen now they are together, you will probably find that things will work out right in the end. It is not a great rarity to meet with these cocks, which become absolutely mute as soon as they are mated, and provided they were in good breeding condition when put up, as yours appears to have been, their silence does not in the least interfere with their fertilising powers. It is not at all unusual for a cock of this kind to apparently sulk and take practically no notice of the hen from the time he is placed with her until she has made some headway with nest building, and begins to call to him from the nest, when their attentions are all that could be desired. Such a cock will often make a quite model parent in not harrying the hen during incubation, and in assisting her to bring up the brood, so you see you may have no cause for worry about his present behaviour. If you are not already doing so, give a teaspoonful of egg or other soft food with about a third of the same quantity of a mixture of equal parts maw, sesame, and gold of pleasure mixed in it, every second day, and on the alternate days a similar quantity of a mixture of equal parts hemp, niger, white millet, teazle, and broken groats, and two or three crisp young leaves of dandelion daily, until the hen has gone to nest. Beyond this let things follow their own course, and with a little patience you will soon find things go all right.

MECHANICAL v. NATURAL TUTORS.

Tafend.—It is rather a contested point whether Rollers can be as efficiently trained by means of organs as with the natural tutor, another accomplished bird singer, but there is not the least doubt whatever that they can at least be very well trained by means of good and proper bird organs, but this does not apply to the toys usually sold for a few pence or a shilling or two, under the name of bird organs. The price of a properly constructed bird organ ranged from about £3 5/- to £3 15/- before the war, but as these instruments were practically a German monopoly, I cannot say what the price may be now, nor even where you would be able to get one, unless some of our large Canary dealers have still some of their pre-war stock unsold. Most of the large Canary dealers stocked them previous to the war, so if you were to get a catalogue from some of these you may still find what you want on offer. But the price may have gone up. Even if you succeed in getting an organ, if you have a number of birds to train you would be well advised to make yourself sure of a good schoolmaster or two to assist in training. The greatest value of organs is to assist rather than replace the natural tutors, and to keep the tuition going through the moult, when the natural tutors are most likely to drop off song.

EGGS DRYING UP.

F. Jebb.—It is not an uncommon occurrence for eggs to dry up in the shells during the process of incubation, but these eggs are not necessarily unfertile. That they are unproductive goes without saying, but I am strongly inclined to think that a fertilised egg is just as likely to dry up, given the same conditions in all other respects, as one that is really unfertile. In my opinion the real cause of the phenomenon lies in some defect in the substance of the shell, and possibly the membrane lining of the shell may be more or less involved, which is of an abnormally porous nature and allows the moisture of the contents to evaporate too rapidly. As you say all your eggs were of this description last season, it looks as if there were something lacking in your general management, but I cannot discover what it may be from the few details given in your letter. Anyway, try the following treatment from now onwards, and report result when the hens have sat the next round of eggs. In addition to the staple seed diet give each pair of birds a small teaspoonful of egg food every third day, and well mix in it three drops of cod liver oil emulsion, and on the intervening days give first half a teaspoonful of a mixture of equal parts, by measure, maw, sesame, gold of pleasure, linseed, and yellow mustard, and next a supply of green food, chickweed, flower heads of groundsel or watercress, in the order named for preference, but do not give any dandelion at all. Keep the cage floor well strewn with clean gritty sand, and for one week add six drops of tincture of gentian and four of tincture of steel to the water every second day. When the hens are again coming forward for laying add a teaspoonful of lime water to the drinking water every second day until the clutch is laid.

BORDER FANCY MOPY.

Eton College.—The bird is gone into a spring moult, probably owing to the exceptionally cold and sudden changes we have had of late. Keep it in a comfortable place, not necessarily overheated, but as equable as possible, and do not allow it to hang in or near a window, near or over burning lights in the evenings, and see that it is protected from cold direct draughts. Cut out from the staple diet all the millet and linseed, and give as staple a mixture of only three parts canary to one part summer rape. In addition give separately half a teaspoonful of a mixture of equal parts hemp, niger, white millet and broken groats, and teazle, every second day for a month. On the alternate days give a morsel of bread and milk with two drops of cod liver emulsion on it, and sprinkled with maw seed. Give two crisp young leaves of dandelion, or a morsel of banana or boiled carrot three or four times a week, and a morsel of the paste advised in last part of reply to "T. W. B. H." In issue for March 31, would help it. Dissolve half a drachm of ammoniated citrate of iron and quinine in an ounce of sherry, add a small teaspoonful of pure honey, and give twenty drops of this mixture in the drinking water two days in every three for a week, and every second day afterwards until the feathers have quite ceased dropping.

WASTED EFFORTS.

A. S.—In all probability the hen's condition is due to exhaustion of the ovaries, and the prospects of her being of any further use as a stock bird are not very promising. Your best course, when she began to sit on the empty nest, would have been to give her a clutch of common eggs to hatch and rear the young if she would do so, and it is not at all unlikely that she would have done this quite satisfactorily, and may then have gone on and nested on her own account again quite normally. Now, however, as she will already have been sitting quite long enough by the time this appears, I would advise you to remove the nest for a few days, add to the drinking water, for three consecutive days, ten drops of lemon juice and as much Epsom salts as will cover a sixpence, then treat as follows until she has made another attempt to nest, and note result. Leave the cock with her, or if he is not a very vigorous wooer, change him and mate her with a lusty young cock in full song and vigour. In addition to the staple seed diet of canary and summer rape, three to one, give the pair a small teaspoonful of egg food, with about a third of the same quantity of a mixture of equal parts maw, gold of pleasure, and sesame, mixed in it, every second day, and on the alternate days give a similar quantity of a mixture of equal parts hemp, niger, white millet, teazle and broken groats, with just a sprinkling in the bulk of yellow mustard and linseed. Give a fairly liberal supply of green food daily, chickweed or flower heads of groundsel for preference. Return the nest-box or pan, as the case may be, when you see the hen showing anxiety to start nesting again, such as carrying about any scraps of material she can find, and trying to place them on the perches, etc., or plucking at her own breast feathers and pretending to carry them about.

CANARY QUERISTS

Should consult St. John's "Canary Breeding for Beginners" (7d.); House's "Canary Manual" (1/2); Baltye's "Yorkshire Canaries" (1/1½); Haase's "Norwich Canaries" (1/1); Wesian's "Stock Book" (7d.); Dr. Clarke's "Septic or Bird Fever" (7d.); Norman's "Aviaries, Bird-rooms, and Cages" (2/8); Ramsden's "Colour feeding" (3½d.); "Seeds and Foods for Cage Birds" (1/2); or the "Nutshell" booklets (2½d. each): No. 5 "The Pet Canary," No. 6 "Ailing Birds and How to Cure Them," No. 9 "The Disinfection of Cages, Bird-rooms, etc.," No. 10 "The Roller," No. 23 "The Border Fancy," No. 24 "Green Canaries." All thoroughly practical and instructive. Prices quoted are post free, from "Cage Birds," 154, Fleet Street, London, E.C.4.

BRITISH BIRDS, MULES AND HYBRIDS

Answered by H. NORMAN.

ABOUT DANDELION.

Beginner.—When sending queries to us you should enclose your name and address for reference. Will you please forward these on a postcard? Dandelion is a most useful plant for cage birds, and the usual way of giving it is simply to collect the leaves. Later on the plant throws up a flower which in time closes and forms the seed pod; then this can be gathered and offered to the birds. In addition to these, the root can also be made use of. If fastened between the wires of the cage the inmates will in time get rid of all but the outer skin. The root can also be roasted, steeped in water, and used as a tonic. (2) The ordinary Brown Linnet is the bird used for contest singing.

BREEDING WITH CHAFFINCHES

A. E. Vaughan.—In trying to breed with a pair of Chaffinches or with a Chaffinch and a Canary, I fear you are undertaking a rather difficult task for a beginner. For although this Finch has bred in captivity, it is one of the latest with which fanciers have managed to produce Hybrids. I do not want to discourage you, but I would advise you to spend a few seasons in experimenting with other varieties before attempting anything with the Chaffinch. The cross between this Finch and the Canary has not yet been produced, and I am not acquainted with anyone who has bred with a pair of Chaffinches in a cage. I am very doubtful therefore about your chances, but if you have a good-sized aviary you could give up to them, you might succeed with a suitable pair of birds with proper care and attention, which would mean providing suitable food for breeding birds, such as live ants' eggs, green fly, small insects, and all kinds of wild food.

(Continued on next page).

THE POULTRY WORLD.

The up-to-date, efficient poultry journal. Every number grandly illustrated and full of practical articles by experts. Invaluable for the beginner and the amateur.

Every Friday, 1d.

Advertisement Forms & specimen copy from "POULTRY WORLD," 154, Fleet St., London, E.C.4.

QUERIES ANSWERED.

(Continued from page 226).

BOOK ON BRITISH BIRDS.

N. F. B.—Our book, "The British Bird Manual," is the one that comes nearest to your requirements. It gives an account of the wild life, nesting, and cage management of Finches and Softbills, and has several illustrations. It is published in two parts—Hardbills and Softbills—post free 1/2 each. A book containing life-size illustrations would be a rather expensive one, on account of its size. (2)

BRITISH BIRD & HYBRID QUERISTS

should consult Houlton's great work, "Cage Bird Hybrids" (7/6); Norman's "British Bird Manual" (2/3); or Part 1 "Hardbills" (1/1), Part 2 "Softbills" (1/1); "Aviaries, Bird-rooms, and Cages" (2/3); "Seeds, Foods, and Wild Plants" (1/2); "Secrets of Hybrid Breeding" (1/2); Clarke's "Septic or Bird Fever" (7d.); "Colour-feeding" (3½d.); or the "Nutshell" booklets (2½d. each); No. 1 "Goldfinch," No. 2, "Linnet," No. 3 "Skylark," No. 4, "Song Thrush and Blackbird," No. 11 "Bullfinch," No. 13 "Chaffinch," No. 15 "Greenfinch," No. 22 "Siskin, Redpoll, and Twite," No. 25 "Small Insectivorous Birds," No. 26 "Large Insectivorous Birds," No. 6 "Ailing Birds and How to Cure Them," No. 9 "Disinfection of Cages, Birdrooms, etc.," No. 12 "How to Moult British Birds." All thoroughly practical and instructive. Prices quoted are post free from "Cage Birds," 154, Fleet Street, London, E.C., 4.

Generally speaking, a Goldfinch and a Bullfinch will agree together, although some Bullies are inclined to be spiteful. In feeding these two in one cage, you will have to make free use of sunflower seed, and use hemp sparingly, as this, when given in any quantity is not good for the Bullie. Your seed mixture had better be 4 parts teazle, 3 parts canary, 1 part rape, and give all other seeds in small quantities excepting sunflower, which can be used daily.

FOREIGN BIRDS.

Answered by WESLEY T. PAGE. F.Z.S.

AMAZON WITH WATERY VOIDINGS.

J. M.—I am of the opinion that this bird's trouble is mainly digestive, though, of course, chills for anyone or anything are quite possible during such atrocious weather. Your dietary has certainly been at fault, and is, I think, the main cause of present indisposition. Do not give tea or sops, or slops in any form, and discontinue egg or custard. The daily menu should consist of seed mixture and fruit, with Parrot grit, cuttlebone, and a chunk of wood (for mandible exercise) continually in the cage. Such extras as biscuits, stale dry crusts, and a little plain cake, raisins, or muscatels and dates, can be given as extras. The bird must have water, but as it has been debarred from this, do not leave it in the cage, but let it have a good drink three times a day; in a few weeks' time you will be able to leave it continually in the cage without fear of its over-drinking. Lightly colour the drinking water with chemical food for the next two months at least, but once a week, in lieu of the chemical food, put a teaspoonful of fluid magnesia in the water. Give cod liver oil emulsion daily, lightly spread on bread, biscuit, or plain cake, or anything similar the bird will eat. If the mouth or throat should be at all furred or slimy, a little honey and borax (given by same method as the C.L.O. emulsion), will soon clear it; it can be given on the same days as the emulsion, but at a different time. It is important that the bird should be kept in as even a temperature as possible, rather warm quarters the best, and kept out of reach of chill winds and draught while the treacherous weather lasts. Report progress a month hence.

TAMING WAXBILLS AND AVADAVATS.

Miss Kershaw.—These charming wee mites are not wild as a rule, and something in the shape of a bad scare must have startled them at first. I consider the best course to take would be to shift the cage to some position where there will be very little movement in its vicinity for a time, and when attending to their needs be as quiet, yet quick, in your movements, as possible. For a month at least only view them from a little distance, keeping still while doing so, and they should duly steady down and become accustomed to you. Of course, I am presuming there is no cat in the room; if so, and the birds are placed rather low down, it is hopeless to expect improvement while the cat is allowed access to the room. There is another alternative, viz., to catch them up and put each pair into a small cage for a month, or even longer if necessary, and then when steady return them to the large cage again. Also, if mice get access to the cage, or run up its front, they would be badly scared, and once they are in such a mood every movement near them would set them flying wildly. Bengalese are more lethargic, but they might easily acquire wildness while the others are in their present mood; on the other hand, they might have a steadying effect. At any rate, you have room for another pair in your cage; they would add to the variety, and they cannot well make matters worse, but might tend to some improvement.

ZEBRA FINCHES AND WAXBILLS.

Esperance.—The Zebra Finches, Avadavats, and Waxbills should agree well together in the same cage. I see no reason why the Zebra Finches should not breed, and, of course, in another few weeks an unheated room will be the best for them. If they actually go to nest, subject them to as little movement as you can. The Singing Finches (Serins) are sometimes apt to be aggressive in cages when mixed with other birds, but not seriously so. The Green Singing Finch is really a very pugnacious bird as a rule, and so often is an Orange Bishop, i.e., under the conditions you wish to keep your birds. I think you would be better to confine yourself to the three pairs; at any rate, do not put in your cage more than twelve birds, none being larger than the Zebras; if larger birds are included you must decrease numbers. If you wish a small crowd, then I should advise you to wait your opportunity, and buy acclimatised specimens of Cordon Bleus, Firefinches, Orange-cheeked Waxbills, and the like, instead of such birds as you name; they all require the same treatment. The cage should be 30 inches long and the wires ⅝ in. apart.

FEATHER PLUCKING COCKATOO.

Dunelin.—(1) I cannot help you till you give me full details of feeding and treatment. I may say that feather plucking is practically incurable once a bird becomes confirmed in the habit. (2) One quart each giant canary, white millet, hemp, oats, sunflower, safflower, maize, monkey and Barcelona nuts; well mix and store in dust-tight receptacle and keep it in a dry place. Grit, cuttlebone, and a chunk of wood for it to exercise its mandibles upon should be continuously supplied.

BOOKS ON FOREIGN BIRDS.

W. F. B.—(1) Foreign Birds for Beginners. 1/2, or the Nutshells, Pekin Robin, Gouldian Finches, Avadavats, Waxbills, The Grey Parrot, and Budgerigars, all 2½d., post free, from our Manager. As regards comprehensive books, there are Page's Aviaries and Aviary Life, 12/6; Butler's Foreign Finches, 25/-; and the late Dr. W. Greene's Amateurs' Aviary, 7/6; and Favourite Foreign Birds. 6/-. All these are, I think, out of print, but copies are mostly obtainable by a perusal of the lists of second-hand books, or by an advertisement in our columns. (2) Aviary and Aviary Life includes all species of birds. There are also Seth Smith's Parrakeets (coloured plates), 40/-; Butler's Foreign Bird-keeping: I. Small Birds, II., Larger Birds, but I am not sure of the published price. (3) I have named the principal works, and you will see others dealing with sectional phases of the subject in the list of those published by CAGE BIRDS, but any of those mentioned above (still in print) could be procured from this office.

BUDGERIGARS.

Reppiks.—It would be better to keep them in one position, as far as possible, once nesting has commenced. Could you not arrange a cord to pull down the blind without disturbing the cage. Of course, they will do well enough hanging on the wall, so long as they get plenty of light and air without draught. Re seeding and flowering grass, when this is mentioned it is fresh grass that is meant as green food. Even in the heart of a city grass can easily be grown in pots and boxes, and when in seed and flower, clipped over as wanted, and supplied to the birds. Equally so, may the seed sprays be gathered in late summer, stored in bags and supplied to the birds during the winter months.

GREY PARROT PLUCKING AND SCRATCHING.

C. Harrison.—You must tell me a little more about this bird: how you fed it, and treat it generally; also how long you have had it, and for about how long has the trouble lasted. Then I will do my best to help you, but feather plucking, once a bird is confirmed in the habit, is most difficult of cure.

GENERAL.

Answered by THE EDITOR.

BOOK ON CAGE MAKING.

J. Hall.—In "Aviaries, Bird-rooms and Cages," which our manager would send you post free for 1s. 8d. There is a long chapter on cage-making, which should give you all the particulars you desire. The book is full of other information which would be of very great value to you.

SUBSTITUTES FOR EGGS.

A. Haywood.—There is no satisfactory substitute which will entirely preclude the necessity of using eggs for the rearing of young Canaries, but many means of employing these economically in the making of "egg-cake" have been published from time to time in our columns. Recipes appeared in our issues of Feb. 24, Mar. 3, and Mar. 10 last, and our manager would send you copies for 2½d., each, post free, if you have mislaid your own. [illegible] recipe is in type, awaiting convenient [illegible] tion, and will appear either in this or [illegible] issue.

ABOUT MAGAZINES.

Reppicks.—The monthly magazine, "Bird Notes," is the Journal of the Foreign Bird Club. The annual subscription to members is 10s., and to non-members 15s. The price of individual copies, published about the 15th of each month, is 1s. 6d. The publishers are The Avian Press, Ashbourne.

Regular Reader.—The publishers of the Avicultural Magazine are Adlard and Son and West Newman, Ltd., Bartholomew Close, London, E.C.1. The price of ordinary issues is 1s. 3d., and the annual subscription to non-members is 15s. The annual subscription to the Avicultural Society is 10s., and the Magazine is sent free to members. The entrance fee for membership is 10s. 6d.

RAPE, CHARLOCK, & SUMMER RAPE.

S. W. B.—The word "rape," as used in the trade covers a number of different kinds of seeds. Seeds of various cabbages (cole seed) are sometimes sold as rape, although rape is a near relative of the turnip. Charlock seed also masquerades as rape, but charlock is a plant of the mustard family, and its seeds may be known from rape by their black colour and acrid taste. Summer rape is the small seed of various colours, from orange to deep brown or reddish purple while ordinary rape is larger and jet black in colour. Summer rape is cultivated on the continent for the sake of the oil in the seed, and, before the war, was known as "German rape," although much of it came from France. English rape, the larger and blacker seed, is grown here mainly as a forage plant or for ploughing into the ground for sweetening it. Its seeds make a good food for British Finches, but for Canaries the summer rape should always be used. You would find much information of value in "Seeds, Foods and Wild Plants for Cage Birds," which our manager would send you for 1s. 2d. post free.

SAWDUST & A VERMIN KILLER.

T. G Morris.—Any local timber merchant with a saw-mill would be able to supply you with coarse pine sawdust, or you could get it from any of the sawdust contractors or sawmills named in the London Directory. Sorry we have never heard of the vermin killer you mention, and it would scarcely be fair to give it a free advertisement.

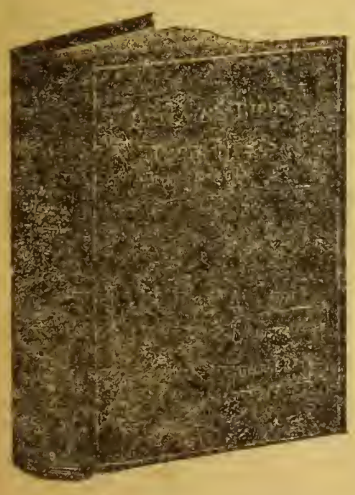
BOOKS ON NESTS AND EGGS.

J. Donaldson.—Quite recently, see our issue for Mar. 31, we answered fully exactly the same question. We could send you for 5s. 4d., post free, Mr. F. Finn's Eggs and Nests of British Birds, and you will find in this issue a reference to two other good works on the subject. You must not expect at a low price a fully illustrated and completely reliable work on such a large subject.

POST MORTEMS.

Mr. G. Yates, M.R.C.V.S., 1, College Road, Harrow, Middlesex, will examine and report upon dead cage birds for a fee of 1s. 6d. each bird; for reply direct, 2s. 6d.; analysis, 21s. The Post Office regulation is that bodies of birds must be sent at the letter rate of postage, and must be packed in hermetically-sealed receptacles which must themselves be enclosed in strong wooden, leather, or metal cases. If this regulation be infringed the packets may be destroyed by the authorities. Any bodies sent to the office of this paper will be thrown away, and if a fee is enclosed the loss will be the sender's

Two Books which will shortly be increased in price. Readers of "Cage Birds" wishing to secure copies at the present low prices must order at once.



BRITAIN'S BIRDS AND THEIR NESTS.

Described by A. LANDSBOROUGH THOMPSON,

With Introduction by Professor J. ARTHUR THOMPSON.

Contains 132 Coloured Illustrations by GEORGE RANKIN.

15/- net; per post 15/8.

"A magnificent bird-book; one of the finest productions of its kind."—"Morning Leader."

"Admirable coloured plates. The birds are accurate, life-like, and effective."—"Times."

"The plates will undoubtedly ensure for the book much popularity. They are most interesting to the student of Nature, and they will also be very helpful to the young ornithologist feeling his way towards a more mature knowledge of the bird world. The letterpress is as interesting and as well-informed as the plates are accurate and beautiful. The volume is a book of rare excellence."—"Scotsman."

"A book of reference humanised by excursions into vivid descriptions of actual hunts after birds, the Golden Plover, for example. The coloured illustrations are beautiful."—"Evening Standard."

BRITISH BIRDS AND THEIR EGGS.

With a New Method of Identification. **6/-** net; per post, **6/5.**

By J. MACLAIR BORASTON (*Member of the British Ornithologists' Union*).

Contains 136 Coloured Illustrations.

The study of natural history, and especially of bird life, is now the healthy hobby and pastime of many amongst old and young alike. Mr. Boraston writes for the beginner, his aim being to give to those seeing birds for the first time the simplest means of identification. He considers that this object is best attained by describing the most obvious characteristics of the birds—viz., their broad distinctions of colour and markings, gestures and notes. The birds are therefore shown here as they present themselves to the eye of the beholder, and their scientific grouping is given in a list at the end.

"Mr. Boraston is a naturalist who can write and bring into his book something of the woodland magic of the heart-beats and true surprises of the bird lover."—"Saturday Review."

"Mr. Boraston has a grace of style not often given to naturalists."—"Times."

W. & R. CHAMBERS, Ltd., 38, Soho Square, London, W., and 339, High Street, Edinburgh.

(Adverts continued from page 220.)

GREY PARROTS

African Greys (red tails), prices reasonable, for good trained talkers; acclimatised tame specimens privately kept: stamp reply: Mrs. Moore, 11, Lupus-st., Pimlico, London.

FOREIGN BIRDS

SPECIAL NOTICE.

Valuable Collection, Just Purchased, will be Sold at Very Moderate Prices.

1.— **Red and Blue Macaw, winner at the principal shows. Good talker.**
2.—**Blue and Yellow Macaw; good talker.**
3.—**Illiger Macaw.**
4.—**Yellow-Naped Amazon.**
5.—**Double-fronted Amazon.**
6.—**Green-cheeked Amazon; very rare; winner at the chief shows; good talker.**

Also a great variety of other Macaws, Parrots, and the smaller Foreign Birds. All acclimatised and in show condition. Write for Price List.

DERRY & TOMS, *Live Stock Dept.,* **KENSINGTON, W8.**

VARIOUS BIRDS.

LARGE strong Macaw cage, 10/-; cock Thrush, singing, 5/-; five Game Bantam hens, 15/-; pair Bantams, 7/6; approval: Dimmock, Market-sq., Leighton Buzzard. (926)

FOR sale, a grand Goldfinch (muler), a Yorkshire hen Canary, good strain, and a waggon bird cage, very good condition: Hicks, 33, St. Kilda's-rd., Stoke Newington. (925)

PAIR high class Norwich, yellow cock, buff hen, both unflighted, price £2 pair; also pair real good Borders, buff cock, yellow hen (a winner), £1 pair; all in pink of condition; approval: useful exchange entertained: Raeside, Seagate, Irvine, Ayrshire, Scotland. (923)

WANTED.

WANTED, all kinds of Canaries; best price paid: W. Johnson, 55, George-st., Leeds. (921)

WANTED, all classes of Canaries, best price paid: E. Cheshire, 34, Crawford-st., Bradford. (906)

BIRDS, Dogs, Parrots, Monkeys, etc.: Standard Menageries, Newton Heath, Manchester. (925)

WANTED, hen Cutthroat, or would sell cock, 6/-: Barr, 15, Sydney-house, Bedford Park, W. (926)

WANTED, healthy Canaries, Mules, also British birds: A. Leitch, 520, Gallow-gate, Glasgow. (926)

NOTICE, wanted Canaries, British birds, pigeons, rabbits; state price: Brain, Aston, Birmingham.

WANTED, Borders, Crests, Yorkshires, Norwich, also British: Dawson, 1, Cumbernauld-rd., Glasgow.

WANTED, Californian Quail, hen Golden Pheasants, pair Nightingales: Miller, Southwick Rectory, Sussex. (923)

WANTED two clear buff Norwich hens, big birds, about 8/-; on approval: Dodman, 68, Towngate, Leyland. (920)

WANTED, colour-fed 1916 Canaries, best prices given; deposit system preferred: H. Jinks, 2, Bramall-lane, Sheffield. (909)

CANARIES wanted, cocks and hens, also Doves, guinea pigs, pet rabbits: A. Keegan, 35, Upper Ormond-quay, Dublin. (925)

WANTED, 1,000 Canaries, all breeds; reasonable; no risks, I send cash with order McKeand, Hamilton-place, Castle Douglas. (904)

WANTED, pure bred Roller cock, unflighted; deposit; state particulars: Brown, 218, Simonside-terr., Heaton, Newcastle-on-Tyne. (924)

WANTED, any quantity young rabbits, adults, cavies, mice, bantams, etc., best prices given: Kremner, 104, Tib-st., Manchester. (915)

WANTED, two adult yellow hen Budgerigars, part exchange two cocks, also Norwich hen Canaries: Miss Wigram, Frensham, Farnham. (923)

WANTED, Norwich, Yorkshires, Borders, Crests, and British, all kinds, send lowest prices: A. Leitch, East End Bird Mart, 520, Gallowgate, Glasgow.

EGGS, wanted new-laid, hens' and ducks', state price per score, large or small quantities; cash sent daily: Oliver, 152, Park-rd., Cradley, Birmingham.

WANTED, Bullfinches, 3/- pair; Goldfinches, 3.3 per pair; Siskins, 3.6 per pair; all kinds of Canaries and foreign birds wanted; best prices given: Dan Patterson, Bird Dealer, 37, St. Peter-st., Dundee.

WANTED, low free singing Linnet, fresh caught or moulted, also Lark, low free singer, for clap-net, 9 yds. 5 ft., all complete, or cash; also Lark net, 6/-: Williams, 3, Swiss-st., Wheldon-pd., Castleford. (922)

WILL buy for cash any quantity Goldfinch Mules, Linnet Mules, Canaries, Goldfinches, Bullfinches, Siskins, Linnets, Redpolls, either sex; good prices paid, prompt cash: Helyar, 55, Patmos-rd., North Brixton. (922)

WANTED, cock Goldfinch Mules, 8/-, hens 2/3; Linnet Mules, 8/-, hens 1/-; cock Goldfinches, 3/-, hens 2/-; hen Canaries, large 3/6, medium 3/-, small 2/6 each; honest dealings: C. Hobbs, 141, King's-rd., London, N.W.1. (922)

BEST PRICES PAID

for Canaries, cages; stocks bought: Broadbent, 355, London-rd., Sheffield. Estab. 1900. (924)

WANTED, ANYTHING ALIVE

Birds, animals, beasts, and reptiles of every description, wild or tame, large or small lots; best prices given; England's largest and best buyers: Princess Livestock Emporium, 21, Brook-st., Manchester. (922)

BE PATRIOTIC!

Wanted, Canaries, cocks or hens; also Mules, Goldfinches, Linnets, Bullfinches, for patriotic purposes. **Not for Export.**

NO LOT TOO LARGE. NONE TOO GOOD.
NONE TOO SMALL. NONE TOO COMMON.
ALL VARIETIES PURCHASED.

I wish it also to be distinctly understood that I cannot only give as much as you can obtain elsewhere, but in nearly every case more in accordance with what the birds are. Also open to purchase Breeding Cages in good and clean condition.—**RUDD, Specialist, Norwich.**

SALE OR EXCHANGE

Mainly Canaries.

PAIR Rollers, 13/6; exchange others: Meager, 19, Arklow-rd., New Cross, S.E.14. (926)

EXCHANGE high-class Canaries for Green Budgerigars, Monkey: 66, Cheetham-st., Rochdale. (925)

TWO marked cocks, over 7in. long, 14/- each, or exchange for Norwich: 86, Albany-rd., Camberwell.

WANTED two Yorkshire hen Canaries, exchange one cock; approval, or sell for 7/6: Robinson, New-st., Retford. (925)

SMALL silver watch, capped, ¾-plate, found in Battle of Mons, 20/-, exchange birds, Pons: 81, High-st., Long Eaton. (924)

TWO typical buff Norwich hens, unflighted, 15/- each, or offers Yorkshires to value: Buckett, 51, King's-rd., Henley-on-Thames. (920)

GOOD Yorkshire hen and H.-M. Goldfinch cock, 12/6; would exchange for a good Roller cock, 1916, guaranteed: Wm. Penfold, Builder, Lingfield, Surrey.

EXCHANGE grand bred short racer cock, 1916, for two hen Canaries, 1916; approval both ways: W. Austick, 2, Kates-terr., Nornabel-st., Hull, Yorks. (920)

EXCHANGE buff pied Scotch Fancy cock, young, for single or double-barrel breechloading gun, or sell 20/-; approval: Bishop, Castle-terr., Winchburgh, Linlithgowshire. (924)

BIG Norwich hen Canary and new 3-compartment breeding cage, all accessories, sell 11/-, or exchange good safety razor or offers; offers first: Coward, 29, Leonard-st., Barnoldswick. (924)

YELLOW hen and new breeding cage and fittings, also 1lb. of egg and biscuit, 10/-; Lark and cage, singing, 6/-, or exchange the lot for a Thrush and cage; no rubbish: Fitzpatrick, 1, King's Parade, Tottenham. (923)

Mainly British.

GRAND Welsh F.-M. cock Goldfinch, winner, 10/-; another, H.-M., 6/6: Davies, Ferndale, Craven Arms.

EXHIBITION Goldfinch, 30/-; Giant Crested, 25/-; exchange boots, bedding: 16, Mt. Vernon-rd., Liverpool. (921)

EXCHANGE cock Greenfinch and cock Mule, from same, for hen Bantams or rabbits: Robson, Exeter-st., West Hartlepool. (923)

SALE. Two cock Goldies, sure mulers, twice H.-M., 10/- each; exchange anything useful: H. Boxley, 31, New-st., Cradley, Staffs. (923)

EXCHANGE three cock Linnets and two Redpolls, field-moulted, for cock Canary or two hens, or sell 9/-: Cook, 38, Wigan-rd., Ormskirk. (924)

HAWFINCHES, cock and hen, would exchange for two clear Yorkshire hen Canaries, or offer: Richins, Highlands, Gloucester-rd., Hampton-on-Thames.

STEADY hen Chaffinch, 6/6, exchange steady Siskin, Goldie, Brambling, Black-headed Bunting, or Twite; yours first: "Studio," 31, Brondesbury-rd., N.W.

TWO healthy cock Goldfinch Mules, in song, 8/- each; exchange house-moulted cock Siskin for one; approval: Hakes, 174, Station-st., Burton-on-Trent.

HOUSE-moulted cock Greenfinch and cock Goldfinch, both bred Mules, sell or exchange good Roller cock: Wooldridge, 16, St. Mary's-rd., Harlesden, N.W. 10. (920)

EXCHANGE that noted book, "Our Canaries," value 12/6, for Hawfinch, Goldfinch, or Bullfinch; give part cash for good large bird; approval: Miller, 6, Asquith-st., Gainsboro'. (922)

TWO grand cock Skylarks, 3/- each; three grand cock Linnets, 3/- each; cock Chaffinch, 2/6; cock Bramble, 2/-; cock Yellowhammer, 2/-; carriage paid: A. Foley, 4, Picton-st., New Boultham, Lincs.

IN aviary since October; cocks, Bramblefinch, three Greenlinches, Chaffinch in full song, Yellowhammer, Redpoll; hens, Chaffinch, large Linnet, three Greenfinches; exchange: Rhodes, 273, Stretford-road, Manchester. (923)

SALE or exchange; six Linnets, four twice house-moulted, breed Mules; also cock Goldfinch, 6/- each, or £2 lot; what offers in Canaries?; approval both ways; cash or deposit; yours first: Thompson, 6, Jones' Yard, Chapel-st., Luton. (922)

FEW selected giant cock Brown Linnets, on full song, fit for show or contest, 5/- each; ditto house-moulted cocks, proved mulers, 10/6 each; Muling cock Greenfinches, 3/- each; hen Canaries, 5/- and 6/- each; all sent carriage paid: Princess Aviaries, 21, Brook-st., Manchester. (922)

Mainly Foreign.

SPLENDID Amazon Parrot, two years old, talks, whistles, sings, and laughs; accept £3, with large square cage; exchange Canaries, anything: Seed Stores, 61, Mount-st., Chorlton-upon-Medlock, Manchester. (922)

Miscellaneous.

ANYTHING alive wanted for cash or exchange: Smith's, 49, Pear-st., Sheffield. (924)

TWO pairs gent.'s new boots, 6's, 12/6; offers: Conic, Newtown, Raunds, Wellingboro. (926)

LADIES!

WOOD'S CHALLENGE REMEDY

Is guaranteed under the sum of £100 to cure when others fail. Far superior to Pills, Pellets, or any Continental treatment. For all cases of irregularities, however obstinate, CHALLENGE REMEDY is supreme. Price, 2/-, 5/-, 6/-. Special, 11/-. Stamp for Advice. Est. 30 years. **MR. & MRS. A. K WOOD, Medical Specialists, 20, Louis St., Leeds.**

A POST CARD ONLY You cannot hold your own in life's battle if weak, worn, or easily jaded. Periodical attacks of moodiness, languor, despondency, depression, and groundless fears mean nerve troubles and lead to brain fag, impaired memory, and unfits one for study, business or pleasure. The chosen ones in every walk of life are the alert, the bright, and the intelligent, nature's natural gift, but marred for lack of a little knowledge. A post card to the Useful Knowledge Publishers, P.O. Box 94, Bradford, will put you in possession of a 48-page book, neatly bound, of valuable information, and will be sent post paid free of any charge whatsoever if you will mention CAGE BIRDS. A little knowledge saves much medicine.

(Copyright.

Music.

GRAMOPHONE, 35 guinea model, beautiful drawing-room cabinet, inlaid Sheraton, height 4 ft., record cupboard enclosed; quantity celebrated records; approval willingly; accept 7 guineas: 3, Aubert Park, Highbury Park, London.

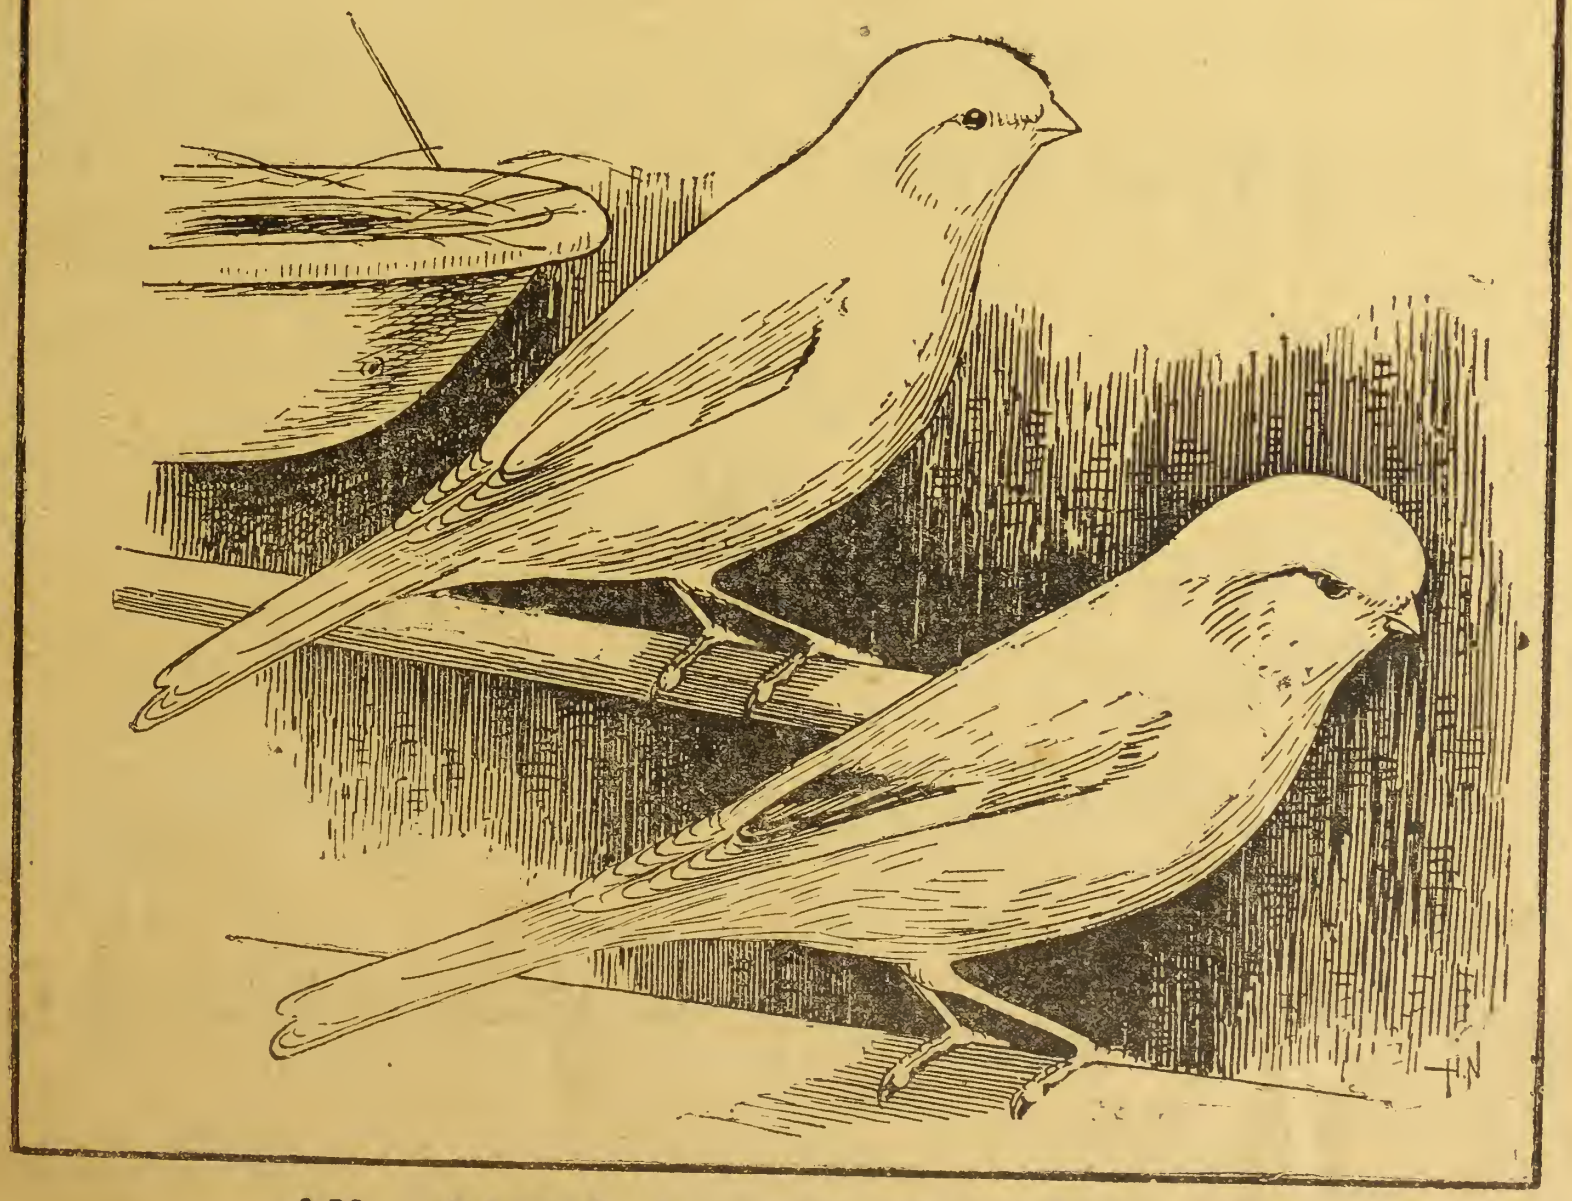
CAGE BIRDS

and BIRD WORLD. *The* LEADING JOURNAL
Devoted to CANARIES, HYBRIDS, BRITISH & FOREIGN CAGE & WILD BIRDS

Telegrams—AVICULTURE, Fleet. London.
Telephone—Holborn 5229.
Registered at the G.P.O.

VOL. XXXI. No. 798 For week ending April 28th, 1917. Price 2d.

Subscription Rate: 10/- per annum, post free. Foreign— 13/- per annum.



AN OBJECT LESSON IN PAIRING.

A pair of Norwich Plainheads matched for breeding. The Clear Yellow Hen at the top is of good type but a shade weak in head and neck. The Ticked Buff Cock at the bottom of the picture is good in these points, but is wanting in substance. His excellence in head and neck points will tend to compensate for the weakness of the hen in these properties, and the fine body substance of the hen will make up for his comparative deficiency in this particular.

F. CARL, Publisher, 154, Fleet Street, London, E.C., 4.

Advertisement Charges.

One Halfpenny for each word up to 48, 1d. per word afterwards. Name and address to be reckoned. Minimum, 12 words 6d.

IMPORTANT NOTE.—Two or more Advertisements coming from the same advertiser, even if sent in different names, are reckoned together, and are charged at two words a penny up to 48 words; after that 1d. per word. No single advertisement, even if accompanied by others, will be charged at less than the minimum price, viz., Sixpence.

Headlines or Footlines, 9d. 1/-, 1/6, 2/-, 2/6, according to size.

The rate for displayed advertisements is 7/6 per inch. Rates for a series on application.

ADVERTISEMENTS UNACCOMPANIED BY CORRECT REMITTANCE WILL NOT BE INSERTED.

Postal Orders must be sent as far as possible. All moneys should be made payable to F. CARL.

The Proprietor reserves the right to refuse any advertisement, or to cancel any advertisement ordered for a series, at any time, without assigning any reason for so doing.

Advertisements must in all cases bear the bona-fide name and address of the advertiser, and no advertisement will be inserted if addressed to a receiving office, or similar place of call.

Advertisements close Tuesdays first post in each week, and should be sent to the Advertisement Manager, CAGE BIRDS, 154, Fleet Street, London, E.C.4. Terms for Display Advertisements on application.

ALWAYS USE "CAGE BIRDS" DEPOSIT SYSTEM.

We are not responsible for the statements made in advertisements, nor of the *bona-fides* of either buyers or sellers In all transactions the adoption of our Deposit system should be insisted upon

RULES.

1.—PROCEDURE.—The intending purchaser should send to this office the amount of the purchase (our deposit fee included), and at the same time he should communicate with the seller stating what it is he requires sent on approval. We acknowledge receipt of the deposit to both parties. In all cases the depositor should give his name and address, and also that of the vendor, and must write same clearly and distinctly.

2.—END OF TRANSACTION.—The deposit is retained by us until we hear from both parties that the transaction has been completed. If a sale has been effected, we hand the amount deposited to the seller. If a sale has not been effected, we return the amount to the depositor. The transaction must be conducted by the parties themselves. We merely hold the deposit.

3.—AMOUNT OF COMMISSION.—The fee is 6d. for each £1, or fraction of £1, and it must be sent at same time as the deposit.

4.—IMPORTANT POINTS.—The depositor must decide within forty-eight hours of the receipt of the goods whether he will keep or return the same, unless, that is, some other period of approval (of which we must be advised) is agreed upon by both parties. The depositor must at the same time notify us of the fact that he has returned the goods. If the goods are not returned within the said forty-eight hours, we reserve the right to send the deposit to the seller after the expiration of that period. And should the seller fail within three days to notify us of the receipt of his goods back again, the transaction will be treated as ended, and the deposit will be returned to the depositor.

5.—A SATISFACTORY PURCHASE.—When a transaction has been completed to the satisfaction of both depositor and seller, both parties must at once return the deposit receipts as a guarantee of its completion. The depositor must at the same time instruct us to pay over the deposit to the seller.

6.—GOODS ALREADY SOLD.—If the goods are sold before our deposit note reaches the seller, or if for any other reason he declines to do business, he must at once return the deposit note to us. Failing its receipt, we reserve the right to return the deposit to the sender after the expiration of three days.

7.—FRESH TRANSACTION.—In case no sale be effected, a deposit is available for purposes of a fresh transaction, provided another deposit fee be paid.

8.—GOODS IN TRANSIT.—Goods in transit are at the seller's risk, and any damage or loss sustained on the journey must be borne by the seller. But goods not approved of must be properly packed and returned by the same means as were used in sending the same

9.—PAYMENT OF CARRIAGE.—The payment of carriage must be a matter for arrangement between the vendor and depositor We do not undertake to settle disputes affecting questions of carriage. But in the absence of other arrangements the purchaser is liable for the carriage of the goods, and if the goods are sent on approval and returned, each party pays the carriage one way.

10.—DISPUTES.—In case of a dispute, the decision of the Editor is final.

IMPORTANT.

SEND THE FULL COMMISSION.—If the full commission does not accompany the deposit, the vendor will not be notified of its receipt until the amount deficient plus the extra postage incurred has been paid to us.

HOW TO REMIT.—Under no circumstances will Cheques or Post-dated Money Orders be accepted as deposits. Uncrossed Postal Orders must be sent and the numbers taken for safety.

BIRD FOOD SPECIALIST, BLACKBURN, Tel. 5297.

MEDICINES.

"AILING Cage Birds and How to Cure Them." "Nutshell No. 6." an account of the troubles which beset captive birds, with the treatment and list of medicines to restore our pets to health. This will save you much discouragement and money, and costs only 2½d. post free. From "Cage Birds," 154 Fleet-st., London, E.C.4. Or 2d. from agents (lists frequently published.

NON-FEEDING HENS

Smith's non-feeding hen medicine has proved a boon to hundreds of fanciers; one writes, "Lost 15 out of 16 young birds before using, since have reared 16 out of 18. Going light medicine also a marvel." Bottles 8d., 1/2, 2/-, post paid: Smith, 73, Audley-st., Reading. (924)

NOTICE TO READERS.

In view of the large amount of business done between our advertisers and readers, and to ensure satisfactory transactions, attention is directed to our deposit system, particulars of which are given at the top of first advertisement page.

SOFT MOULT. NOT SINGING.

If you have any birds you are relying upon for the breeding season that have gone into Soft Moult, we Guarantee you a *perfect* cure.

DITCHFIELD'S TONIC DROPS

are a certain cure for loss of voice, soft moult, slow moult, going light, feather plucking, and inflammation of the bowels.

DITCHFIELD'S FAMOUS REVIVO

is absolutely unequalled for giving new life and vigour to the birds, and for producing that smart tight appearance of the plumage so much desired by all fanciers.

These two Medicines, given on alternate days, will bring any bird into breeding condition.

DITCHFIELD'S SPECIAL LUNG TONIC

the grandest medicines ever introduced for chest and lung affections in cage birds. Can be given with absolute confidence to the most weak or delicate birds. All medicines can be given in the drinking water, and the birds take them freely, with marvellous results.

All the above remedies are sold in 8d., 1/2, and 2/2 bottles; two 8d. bottles for 1/2, two 1/2 bottles for 1/11, or three for 2/8. P.S. The 1/2 bottles are treble the 8d. size. All orders sent per return, post free.

FRANK DITCHFIELD, BIRD SPECIALIST, **OLDHAM**

Kippax Linnet Club, headquarters Commercial Hotel. Members' sing, April 21. 43 birds entered for three prizes: 1, Plows; 2, R. Collinson; 3, H. Collinson. Timekeepers, J. Wallis, J. Cooper; tappers, H. Collinson, G. Lindley.—R. Plows, Sec.

BARNSLEY.

Dove Inn Linnet Club, Doncaster Road, 14 birds entered for four prizes; Shepherd, timer; J. Bamforth, chalker: 1, Hardman, 3 min. 30 sec; 2, Dickinson, 3.27: 3, Wadsworth, 3.25; 4, Norman, 3.20. Lark sing, same date, same timer, Dunk chalker: 1, Fish, 1min. 2sec.; 2, Hardman, 40sec. in 7 min. hung but very late.—J. Hardman, Sec.

LEIGH.

Globe Inn Linnet Club.—Members' contest, April 14, for six prizes, and some very good singing was heard: 1, quality, R. Statham; 2, Jones; 3, Prescott. Time: 1, Disley, 166; 2, J. Statham, 153; 3, Rigby, 130. Timers, J. Murphy, W. Meadows; judges, J. W. Jones, T. Statham; minutes, J. Whittle. An open contest will be held May 5.—R. Disley, Sec.

LEEDS.

Linnet singing contest for quality, Clarence Hotel, Skinner Lane, April 22, 24 birds sang for four prizes: 1, Binns; 2, Callighan; 3, Wigfield; 4, Shepherd. Judges, T. C. Summers, W. Lipman; time-keeper, Lockwood.—T. C. Summers, Hon. Sec.

Open contest, Glassmakers' Arms, Greyhound Place, York Road. Linnet singing, 32 birds: 1, 2, 3, shared, Marshall, Richardson, and Watson; 4, Richardson. Night, 18 birds: 1, Richardson; 2, 3, Marshall. Judges: Messrs. Dearlove, Biss, Bomfield.—G. Marshall, Hon. Sec.

Linnet contest for quality singing, "Old Bird House," Albion Hotel, Leeds, April 22; 30 of the best birds in Leeds contested for four good prizes: 1, "Young" Thompson; 2, Sellars; 3, Hollingsworth; 4, Chippendale. Judges, Hayes, Grant, Hardcastle.—T. Crane, Sec.

CASTLEFORD.

Linnet singing contest, George and Dragon, Bridge Street, April 22, 20 birds entered for three prizes: 1, B. Nelson; 2, Wainright; 3, shared, Nelson and Shaw.—A. Watkiss, Sec.

Linnet singing contest, George and Dragon, Bridge Street. Club sing April 15 23 birds entered for three prizes: 1, Wainwright; 2, 3, W. Nelson. General meeting, April 29, at 7. Business important. Members and intending members please attend.—A. Watkiss, Sec.

Linnet contest, Grey Horse Inn, April 22: 1, Wainwright; 2, Watkiss; 3, Longfield. Also match between J. Williams and Wainwright, one bird up, 2 minutes' sing, Williams giving ½min. start: Wainwright, 41 sec.; Williams sang through 2min.

Open contest, April 28, one bird a time, 3sec. a break; entrance 6d., 5s. added; first bird up at 4 o'clock: J. H. Nicholls, Sec. (Advt.)

Club Reports.

NEWTON-LE-WILLOWS F. & F.S.

Meeting, Pied Bull Hotel, April 12, with a nice number present. The feature of the meeting was a lecture given by Mr. W. Bray, a well-known Yorkshire fancier, on the rearing of cage birds, which was very nicely rendered. It was listened to very attentively and should give young fanciers a good idea how to go about the rearing of young birds. The Sec. hopes that we shall be able to hold many more meetings of the same kind.—A. Harrison, Sec

NORTHERN YORKSHIRE C.C.

Meeting, Shield's Cafe, Bigg Market, April 18. Mr. Crawhall presided over a good number. The first item was the best means of obtaining new cup to replace the one won outright, and after a deal of discussion it was decided to open a subscription list and put the balance of 10s. from the presentation to the list, and also we draw a sum not exceeding 2 guineas from the club funds. Mr. Crawhall kindly headed the list with £1 1s. I shall be pleased to receive any small donation towards same, as we would like to have as good a cup as possible. The table shows will be held on June 20, July 18, Aug. 15, Sept. 5. Mr. Crawhall will judge first show. As an inducement to members to show as many birds as possible at these shows, Mr. Crawhall kindly presented a gold-centre silver medal, and Mr. Studholme a silver medal, for 1st and 2nd most points over the four shows. We made a good start of new members, when the following were proposed: Messrs. Brown, Brandon Colliery; Sergt. Cockayne, Collins, Leadgate, Teal, Gateshead, Hay, Jesmond, Cleverly, Cramlington. Mr. Crawhall having only a limited quantity of rings and colour food, would like members to give him their orders as early as possible. Wm. Mather, Sec.

"Food."

THE GREAT NEW NATIONAL WEEKLY.

A practical journal which shows how to grow our own food.

The profitable rearing of Poultry and animals which help to fill our food bill is dealt with each week, and invaluable advice is given to those who have started to produce home-grown fruit and vegetables.

No one with a garden, large or small, should be without this wonderful penny-worth, and the small holder will find in it a veritable treasury of practical knowledge.

Every Thursday 1d.

Advertisement forms and specimen copy sent post free on application to "Food" Offices,

154, Fleet St., London, E.C., 4.

STANLEY F. AND F. AND C.B.S.

Meeting, March 24. Election of officers:—Chairman, J. Middlemist; vice-chairman, E. Smith; treasurer, W. J. Platton; secretary, J. Armitage; assist. secretary, Wm. Siddle. Decided to have a young stock show in August. There was a very good attendance.—J. Armitage.

HULL ROLLER C.C.

Meeting, Headquarters, Argyle House, Anlaby Road, April 19, before a good muster. Messrs. Harrison, Harris, Rawcliffe, and Furnandiz were made members. Several birds will be brought to our next meeting, and the song tours explained by one of our members; fanciers interested will be welcome.—A. Baggaley, Sec.

CRYSTAL PALACE AND PENGE.

Meeting, Alexandra Hotel, Penge, April 11, Mr. Foxen chair, and a good attendance. The order for pepper was 22lbs., which we hope will all be used. Mr. Foxen opened a discussion on colour food. He gave his methods in a very simple form, so that the novice was well able to grasp his ideas. There were a good many questions to answer, which took up the rest of the evening. A vote of thanks was accorded to Mr. Foxen.—W. D. Fryett, Sec.

LONDON C.B.A.

Meeting, April 19, 2, York Street, Piccadilly. Discussion on "Things we do not give sufficient attention to," opened by Mr. J. Robson. The lecturer impressed upon members the necessity of patience with breeding pairs, and particularly of seeing that birds are in fit condition before pairing. He also touched upon the proper selection of points in the birds. The lecture was much enjoyed by the members present, who plied Mr. Robson with questions, to which he willingly replied.—A. J. Watcham, Hon. Sec.

SACRISTON F.F. AND C.B.S.

Special members' meeting in Club-room, April 28. Show date for members, Dec. 15. Decided that new members pay at least 1s. on being accepted, and the rest within three months of the annual meeting. Those joining afterwards must pay their whole sub., 2s. 6d., on the date they are accepted. In reference to claimants of money, I will be in communication with each one, I expect, by the end of 14 days after publication. We are having a grand social in Workman's Club Hall, May 4, from 9 p.m to 5 a.m. Gents' 1s. 3d., ladies 9d.—R. J. Scorer.

MANCHESTER & N. COUNTIES.

Meeting and Table Show of British, April 16, Deansgate Hotel, Messrs. Dooley and Fairhurst judged. Goldf. or Bullf.: 1, Dooley; 2, vhc, Green; 3, 4, Shaw. Greenf.: 1, Shaw; 2, 3, Mitchell. Linnet: 1, Fairhurst. Siskin, Etc.: 1, 3, hc, Fairhurst; 2, 4, Green; vhc, Mitchell. A.O.V.: 1, 2, Mitchell. British, Hen: 1, Mitchell. Muling Pairs: 1, Mitchell. Special most points: Green. Next meeting April 30. We are to have a lecture on the Yorkshire by Mr. Chittenden, of Bradford, and Hope we shall have a good attendance. At the Deansgate Hotel, 8.30. Friends cordially invited.—J. Green, Hon. Sec.

PLYMOUTH & WEST COUNTIES.

Meeting, Oddfellows' Hall, Morley Street, April 17. Mr. W. G. French, chair. A Linnet singing contest had been arranged, but there was a lack of entries. The medal presented by Mr. Gill for the best songster was transferred to the Nest Feather shows for the novice scoring second most points, the Society's medal for novice most points remaining as before. Mr. Rapson was appointed hon. assist. sec. in succession to Mr. O. Moffitt, recently appointed hon. sec. Final arrangements were made for N.F. shows, May 20, June 20, and July 18. Agreed to purchase two new silver cups for the Crest and British sections, the old ones having been won outright. This makes a total of seven nest feather cups which the society are offering for most points at all three shows. Ten new members joined in the first three months of the year.—O. Moffitt, Hon. Sec.

EDINBURGH C.B.S.

Meeting, Cairn's Memorial Hall, Gorgie Road, April 17; president, Mr. Adam, in the chair, and a good turnout. New member admitted, Mr. A. Ketchen. A letter from Mr. Menzies, judge, intimating his acceptance of engagement to judge at Scotch Fancies Annual Show, was approved. A letter from the Sec. of the Southern O.S., with regard to the loan of their staging for our annual show, was approved, the Sec. to reply accepting their terms. Agreed that Sec. approach Mr. Dewar to see if he would kindly give us a lecture on Canaries or British birds at next meeting. It was left to Sec. to make arrangements to get a room for monthly meetings, also to try to fix up with a hall for F.F. Show, and to report same at next meeting. This being "Question Night," a very pleasant hour was spent. A hearty vote of thanks to chair brought the meeting to a close.—J. C. Charlton, Sec.

GLASGOW & W. COUNTIES CLUB

Special Linnet show, April 14. Mr. Wm. Dinwoodie (President) presided over a good attendance. Mr. A. Marr was admitted to membership. A judging competition took place over F.-M. class. Result: 1, Findlay; 2, Whitelaw; 3, Bannerman. Specials were kindly given by Messrs. Blair, Fraser, Macfarlane, Pettigrew, and Wm. Dinwoodie, who were cordially thanked for same. Classes for next monthly show: Greenf., Twite, Lesser Redpoll, Mealy Redpoll. The pittance granted the Sec. (in his absence) owing to a judging-engagement, if not considerably augmented at proper monthly meeting, can only have one termination, that of his resignation. Let us have a full house at next meeting. Messrs. Brown and Macfarlane judged: Linnet, H.-M. (6): 1, spl. Letham; 2, 4, Bannerman; 3, 6, D. Dinwoodie; 5, Pettigrew. F.M.: 1, 2, sp., Johnstone; 3, Bannerman; 4, 6, Pettigrew; 5, 7, D. Dinwoodie.—J. H. Adam, Sec.

DULWICH & PECKHAM C.B.S.

General monthly meeting, headquarters, April 3, Mr. F. Cole in the chair. A large number of members were present to hear Mr. J. Robson's lecture on "Management of the Birdroom." Mr. Robson treated his audience to half-an-hour brimful of useful information, and some of the oldest fanciers present had something to think about after he had resumed his seat. The Chairman invited questions, which he was sure the lecturer would be pleased to answer, and it was not long before they were being fired at him thick and fast, and he was kept very busy for an hour or more answering points raised on the management of the birdroom, pairing and breeding of Canaries. Mr. Robson answered all questions in a very able manner, and very much valuable information was gained. A very hearty vote of thanks was accorded to Mr. Robson and to Mr. Cole for his services in the chair.—W. Hodson, Hon. Sec.

A RECIPE FOR EGG BREAD

And Some Simple Remedies for Common Ills.

By "Old Helpmate"

Some advice that should be helpful to all novices, and some of the older hands, in view of the breeding season.

As a "preliminary canter" to my humble contribution I may say that it is intended for novice fanciers, not for "Old Hands." My main reason for giving another recipe for egg bread is that there is in it a valuable digestive and nutritive ingredient (Blakey's malted oatmeal) which is not in any of those I have noticed in our useful, interesting and instructive journal, Cage Birds, from which, for many years, I have derived much pleasure, instruction, and knowledge. I would rather have a bad cold with its attendant discomforts for a time, than miss my weekly perusal of it.

Having paid it this deserved and sincere compliment, now for the recipe:—3½ lb. of Dr. Allinson's whole wheat flour, one 3½d. packet of Blakey's malted oatmeal, one tablespoonful of Plasmon powder; and as many new-laid eggs as may be necessary to make the lot into a dough about the stiffness of ordinary bread dough.

The whole wheat flour and the malted oatmeal can be obtained at most grocers in the big industrial towns, and the Plasmon powder at most chemists. The first-mentioned ingredient embodies all the natural chemical constituents of wheat, which are very desirable and beneficial to the parent birds and their young. The second one, malted oatmeal, is highly nutritive in itself, and the extract of malt in it is a digestive of the starch in cereal foods. The third one contains all the valuable chemical salts and albumen of milk without its butter fat. The fourth (eggs) I leave to speak for themselves. (Rotten ones need no invitation to do so.)

How to Make the Cake.

Firstly, the hands should be washed thoroughly clean with soap and warm water and rinsed in plain warm or cold water, and thoroughly dried; then proceed as follows:—Make the Plasmon powder into a thin paste with cold water, add to it just sufficient hot water to liquefy it and whisk it with the eggs. The only consideration as to the number of eggs is that not more should be whisked than the flour and oatmeal will absorb in order to make a dough of ordinary stiffness. A portion of the flour and oatmeal should be spared for sprinkling on the baking tins to prevent the dough sticking to them.

Rub the flour and oatmeal together between the hands, and gradually add them to the whisked eggs and Plasmon, stirring with a fork or spoon. Roll the resulting dough into cakes about 1½ inches thick, place them on baking tins, previously sprinkled with the mixed flour, and bake in a slow oven. The main object of the baking is to evaporate all the moisture from the cakes which are preferable to loaves on this account.

When sufficiently baked, remove them from the oven and place where they will not absorb moisture, to become cold. When cold crush them by means of a rolling pin, on paper, and replace in the oven for ten minutes. Then pass the crushed bread through a bread mill or powder it with a rolling pin. It will then be ready for storing in tins, glass or earthenware jars, which should be previously heated in the oven to drive off any moisture or damp, and it will keep good any length of time if kept in a dry place.

If these rather tedious directions be strictly carried out, a comparatively cheap and convenient egg food will be the result, which will amply repay the trouble of making it by successful results in the breeding room. Users should remember that it is a highly nutritive (not a stimulating) food, and therefore should be reduced, when used, with old whole wheat flour bread, previously soaked in cold water and squeezed nearly dry, in proportions suited to the purposes for which it is intended, viz., getting birds "ready," feeding their young, or for songsters. Given daily, in its strongest form, with finely scraped carrot or chopped green food, it will enable Larks to sing their song to the fullest extent.

The Mischief of Too Much Sugar.

It will be noticed that there is no sugar or salt in the recipe. These can easily be added when making any required quantity, if the user desires their addition. Finely scraped or powdered cuttlefish bone is preferable to table salt, and pure cane sugar to ordinary household sugar, which is a source of fermentation, and the consequent sourness in egg food, often leading to diarrhœa, and the condition, in birds, known as "going light."

I am of the opinion that ordinary sugar in excessively sugared egg food is the most common cause of sweating in hen Canaries, by surfeiting the liver (the largest organ in the body) rendering it sluggish, and by over-stimulating and over-heating them. The following is a remedy for sweating hens:—One drachm of sulphate of soda, generally known as Glauber's salts, in a pint of water. Dose: One teaspoonful mixed with a drinker of water daily for a few days, and a slightly warm bath daily in which a pinch of carbonate of soda has been dissolved. The warm water cleanses the skin and the carbonate of soda neutralises the acrid humours of the sweating. The Glauber's salts, given as above, gradually and gently excites the necessary action of the liver and cleanses it. Avoid the cause (excess of ordinary sugar) and the effects will cease.

Sweating Hens.

A sweating hen, to use a homely phrase, "does not know what she ails" and appears to have no fixed purpose in her life other than that of stuffing herself with excessively sugared soft food, the main cause of her disordered condition. She may be aptly compared with a pampered pet toy dog, fed mostly on various meats, and thereby disordered, yet he won't eat much of aught else, and thus prolongs and increases his disorder.

Sweating, in breeding hens, is a most trying disorder to the novice, who has invested all his spare money in a pair of birds, the hen of which becomes so afflicted, oftener than otherwise, the fault of her attendant in giving her food excessively sweetened with such a stimulating and over-heating ingredient as sugar. It is advisable to err on the plain side of food rather than on the rich side, and allow the birds a little more time for getting "ready." Many novices are in too eager a hurry to see their birds nesting early, and, obsessed with this overpowering desire, stuff them with excessively sugared egg food "to bring them on," very often on to comparative ruin and failure of the breeding season. When the remedy for sweating appears to have cured the bird, the best tonic for her is Parrish's chemical food, given in five drop quantities daily in a drinker of water. It is the best all round tonic in a bird room especially during the moulting period. It keeps up the birds' health and improves the sheen of their feathers.

Some Simple Remedies.

The following is a remedy for wheezing ailments:—Chloride of ammonium and nitrate of potash of each five grains; ipecacuanha wine and oxymel of squills, of each one drachm; water four ounces. Half a teaspoonful daily in a drinker of water.

Here is a remedy for soft moult:—Glycerine (if obtainable) ½ oz., strong compound infusion of gentian, half drachm, best gum acacia ½ oz., water 3 oz.; mix the water and glycerine, shake together and add the rest, shaking frequently until the gum is dissolved. Half a teaspoonful in a drinker of water. Give the bird a slightly warm bath daily—ordinary or spray—and place him in the rays of the sun till dry.

A remedy for the prevention of egg-binding:—Oil of sweet almonds seven drachms, tincture of cayenne one drachm; a few drops in a little egg food daily during the laying period. Finely powdered cayenne pepper may be substituted for the tincture, in which case it should be warmed, somehow, for an hour with the oil to extract its properties.

I hardly need say that fresh air is an important factor in keeping up the general health of birds. Bird rooms should have a ventilator that will convey into them fresh air from outside, without direct draughts on the birds. Of course in the summer time the window can be opened to its full, but if left so all the night and the weather becomes boisterous, the birds might suffer in the form of a cold. I will send a sketch for an early issue of a simple ventilator which prevents such an occurrence.

[It will be as well to say that when chemicals of any kind are dissolved in the drinking water the vessels in which it is offered to the birds must be of glass or porcelain, not of metal. Also, the water should be boiled beforehand and allowed to get cool before adding the chemicals.—Editor, Cage Birds.]

"PIGEONS"

The only paper dealing solely with Show, Table and High-flying Pigeons.
Coloured Plates a Special Feature.
Every Friday 2d. Send P.C. for specimen.

"FUR & FEATHER"

The Rabbit, Cat and Cavy Paper.
The only Paper devoted to these subjects.
Every Friday 1d. Send Postcard for Specimen.

The Editor is always glad to receive and consider suitable **contributions**, whether articles, sketches, or photographs. Provided an addressed envelope, sufficiently stamped, accompanies same, every effort will be made to return unaccepted contributions promptly, but he does not in any case hold himself responsible for their safety.

All matter intended for publication must be written or typed on **one side** of paper only, must be authenticated with the proper name and address of the sender, and must reach us not later than the first post on Tuesday if insertion in the next issue is desired.

"CAGE BIRDS" will be sent post free weekly, on the day of publication, at the prepaid rate of 10s. per annum for the United Kingdom, and 13s. annually for foreign countries.

Twitterings.

Who Said This?

Somebody has inspired a paragraph as follows, in the Cardiff "Western Mail":—Bird-fanciers in the Cardiff district say they have not known such an extraordinary season for over thirty years. Most of them, keeping Canaries and other cage-birds, say that not one egg has been laid, which is very remarkable for the middle of April.

OBITUARY.

DR. HENRY HETLEY, J.P.

Great regret will be felt by all who knew him at the death of Dr. Henry Hetley, J.P., of Upper Norwood, S.E., which took place, almost suddenly, on April 13. He was a member of the Foreign Bird Club, and until the last few years a frequent exhibitor of rare species at the Crystal Palace and other big shows. The many and heavy claims made on his professional skill since the war—for, in addition to his private practice, he was acting as physician and surgeon to a large war hospital in Croydon—prevented his keeping up his collection of Foreign and other birds at the level of some years ago, although he retained quite a good number to the present day. He was the first, we believe, to succeed in breeding the Crimson Finch in a cage. Dr. Hetley was a vice-president of the Crystal Palace District Cage Bird Society. He will be greatly missed in the district in which he had lived for so many years, for his kindly heart endeared him to all classes. He was the doyen of the medical men of the neighbourhood, and one of the best-known doctors in South London, and a J.P. for the Borough of Croydon, and the very large congregation which assembled for the funeral service at All Saints Church, Norwood, on Tuesday, was a striking tribute to the great regard in which he was held. The doctor was a gentleman with many hobbies besides his birds. Gardening and carpentry greatly interested him, as did poultry, and for some years he was an ardent collector of postage stamps. Dr. Hetley, who was in his 66th year, leaves a widow, three sons, and two daughters.

Mr. O. Moffitt, 27, Ryder Road, Devonport, writes to say he has been appointed hon. sec. for Plymouth W.C.O.S., and will be pleased to answer any inquiries concerning this society.

Probably the practical jokers who by their skilful mimicry of the song of the Cuckoo have in previous years given rise to the reports of abnormally early Cuckoos have this year found something better to do, either here or elsewhere, for we have not this year been regaled with stories of Cuckoos coming in with the year. During the last week, however, the sound of the Cuckoo's note has been heard in one or two places. It was reported from Sheffield on April 16.

Country Rambles.

On Sunday, April 22, the field section of the National British Bird and Mule Club took train from Marylebone to Beaconsfield, and rambled to Chalfont. Mr. Bowler, of Aylesbury, member of the High Wycombe F.A., joined the party at Beaconsfield. The weather was dull, but fine. A very enjoyable day was spent, and about 30 species were found, the most prominent being the Woodpecker, Jay, Brown Owl, Yellow Bunting, and a Pied Blackbird. The Nightingale and Cuckoo were seen and heard, and several recently built nests of the Blackbird and Thrush were found, but no eggs. The country passed through was an ideal one for bird life. The fruit orchards promise well, the buds showing in abundance. The ramble for Saturday afternoon, May 5, will be from Baker Street to Ickenham Station, and to Denham, returning from Uxbridge. Time of train will be published in Cage Birds of May 5th.

We regret to hear that a reader, Mr. W. Wooldridge, who with some friends had made arrangements to join the party, attended at Marylebone Station, but failed to recognise any of the members. Mr. Trower wishes us to express his regret at the unfortunate occurrence, and to say that in future the leader of the party will wear either a Cage Birds League badge in the lapel of his coat, or a badge of the National British Bird and Mule Club.

Migrants Arriving.

Herewith a few notes recently taken re our migratory birds; no doubt the very cold and rough weather has delayed their coming, writes Mr. E. Gooderham, Ipswich. Willow Wren, at Martlesham, Suffolk, April 12. Cock Yellow Wagtail, at Upper Dovercourt, Essex, close to sea, April 13, and he was actually following the plough, the same as the residential Pied Wagtails; this is the first time I have seen this. Several pairs of Wheateats at Orford, Suffolk coast, April 13, the cocks being in lovely spring plumage. One Chiffchaff cock at Woodbridge, Suffolk, April 14. Nothing fresh noticed between April 14 and April 18.

Seasonable Hints on Useful Weeds.

By RICHARD MORSE, F.R.H.S.

A weekly feature which will be found of the highest value to all who keep seed-eating birds, and of interest also to all who appreciate the beauty and usefulness of the flowers of our waysides and meadows. The first of the series appeared in our issue dated March 17.

Watercress.

THE British countryside is, strangely enough, little appreciated even by those who live in rural districts, in spite of its multiplicity of attractions for folks of all tastes. Our fields and woodlands abound with art and science, and poetry and music of all kinds, if only we will go out and get into touch with them, and such happy recreation can now, better than ever before, be turned also to profitable account.

I have often been astounded to hear even country people confess that they have never seen watercress (Radicula Nasturtium R. and B.) growing, except perhaps in cultivated beds; and when its wide distribution and abundant growth in rivers and streams are at last made clear to them, one has to overcome also a most persistent prejudice against the wholesomeness of the really wild plant. A friend of mine even to this day stedfastly refuses to use watercress which has not been purchased at a shop, as if that were an undisputed guarantee of its cleanliness and purity!

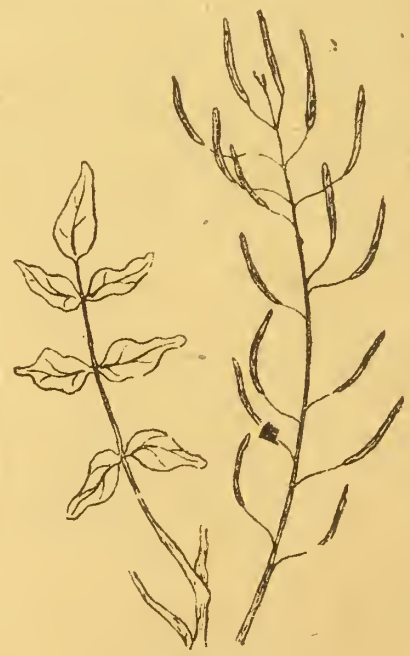
Now it cannot be too strongly insisted that watercress which has been gathered by an unknown person is always open to suspicion, not only as regards human consumption, but also as a green food for cage birds, for it often grows very profusely in stagnant and contaminated water, and is actually sought for in such places by ignorant and unprincipled persons. The use of watercress from such habitats is, of course, fraught with the gravest danger to bird and man alike.

Another objection to the watercress one buys is that other weeds similar in appearance may be mixed with it, and by the unpractised eye these are often overlooked, with dire results. I shall, therefore, briefly set out first the chief characteristics of the true watercress, and then show how one or two of its worthless neighbours may be distinguished from it, and hope that the details given will enable any searcher by stream and brooklet to identify and gather as much of this wholesome weed as he can profitably utilise.

I have not been able to find any watercress blossom yet this season, but the plants are making good headway, and quite a quantity of young green shoots will soon be available. When the flowers do appear, it should be noted that the petals are small, white, and four in number, whilst the little leaflets, forming the well-known compound leaf, have no teeth-like notches round their edges, but merely a characteristic, wavy appearance. The seed-pods ultimately reach about an inch in length, and are shown, with a leaf, in the accompanying sketch.

One of the commonest companions of the watercress is a little plant known as brooklime (Veronica Beccabunga L.), and though I have never myself made any use of this weed, I am assured by those who have, that its effect on cage birds is always harmful, though in times gone by countryfolk used it as a spring tonic for themselves and their children! It is easy to distinguish when in flower, as it has dainty little blossoms of an attractive, bright blue (or pink), whilst its simple, oval leaves (not compound, as in watercress) occur in pairs all up the stem, and are conspicuously notched round the edges.

Another plant often growing all intermixed with watercress is known as marshwort (Apium nodiflorum R. t.), and this, too, should be avoided as a most suspicious weed. It has tiny, greenish-white flowers, each with five petals (not four, as in watercress), and though its leaves are at first sight very similar to those of the genuine plant, the leaflets may be at once distinguished by their toothed or saw-like edges. Moreover, its stems are hollow, whilst those of the watercress are solid.



WATERCRESS IN SEED.

It is generally agreed that amongst the many green bird-meats which our countryside provides, few, if any, possess such valuable medicinal properties as the watercress. It has a peculiarly beneficial effect on the bloodstream, and is undoubtedly one of the best purifiers amongst all our native plants, being greatly preferable for this purpose to most of the drug preparations now so frequently offered for sale. If there is any suspicion as to its cleanliness, it is a good plan to rinse it for a few minutes in a pale solution of permanganate of potash, or Condy's Fluid, afterwards, of course, carefully washing it again in pure, clean water, and drying it thoroughly before use.

It is not generally known that watercress can be easily cultivated by stream banks, or even in shallow pans in gardens, if these are kept liberally supplied with water. Seed can be had for a few pence per packet.

Readers are invited to send any botanical specimens which they have difficulty in identifying. The whole plant, including fruits, should be sent whenever possible. Packages should be addressed "The Editor, Cage Birds, 154, Fleet Street, London, E.C.4, and must be accompanied by a P.O., for sixpence. Answers will appear in this column.

CLUB AND SOCIETY NOTICES

ONE NOTICE of any forthcoming Society meeting inserted free. It must reach us not later than Tuesday morning's post. Specially printed Club Notice Postcards may be had free on application to our Manager. Secretaries should always use them.

NOTE. Only the details asked for on our cards can be published. Such phrases as "a large attendance desired," etc., must not be included. Classification for forthcoming shows, appeals for new members, and any other matter in the nature of an advertisement will only be inserted if paid for at advertisement rates.
